I just purchased the IC-T22A handheld and I'm having no luck accessing the airband from 108-136. Is there a special trick not mentioned in the manual that I need to know? I bought the radio because they told me it will receive the airband and now I'm totally frustrated and they are not open today. Would appreciate anyone's help. Thanks
Adrian Smith

1218. 50MHz CD Rom

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-18 00:00:00 UTC
From: Geoff Brown <equinox@itl.net>
Message-ID: <3217A7B6.3EAB@itl.net>
Source record: 218673
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

We are putting together a 50MHz CD Rom, this will contain the following:
Masses of audio clips from 1979 from all over the world.
Masses of pictures on antennas, operators, expeditions etc.
Filters, UKSMG Six News, Internet Six News, Beacons, Emails,etc.
At present we have 140megabyte of info and need more! (500 meg more!)
It will be a stand alone CD (no installation needed and will carry the
viewing software where appropriate)
If you have any pictures or audio clips then please send them via email
to us.
Tks de Geoff

Is that why the RSGB are at a standstill, spending all their time
counting uncollected cards?

In any event, a million cards is a mere microcosm compared with the number
of forests passing through most households in the form of junk mail and
hand bills.

How about a campaign to cut back on kitchen tissues, a real wood waster.

Mike.

NOT much for _clear thinking_ people! Really, to get politics wrapped into these arguments is senseless. Yeh, some people will refuse and others will sometimes react violently ...what does it accomplish either way? Certainly, there is no persuasion by being bitter about one thing or another. All this does is ADD to one's stress.

The QSL card is the ultimate junk mail to many of us. Only a few people bother to ask me if I will reply to their cards. A couple of years ago a PY told me, at the end of the QSO, that he would send me a card via the bureau. I told him that I do not collect, or reply to, QSLs and that I did not have any envelopes with the bureau. He then said that as he had written it he would send it anyway!

Perhaps the time has come to abandon certificates such as DXCC.

1229. Used FM Broadcast Equipment

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-18 00:00:00 UTC
From: Rick Whiting <rwhiting@winternet.com>
Message-ID: <321773A2.44B@winternet.com>
Source record: 218684

I am looking for potential donors or low-cost sources for FM broadcast equipment, e.g., used equipment which may require renovation or upgrading.

A recent change in the law on communications in Cameroon allows citizens to own and run private radio stations. Prior to this law, radio stations were all owned and run by the state, hence limiting freedom of expression. The enactment of this law has come as a welcome relief to many Cameroonians who have long wished to go on the air. Due to the high cost of FM broadcast equipment, assistance is needed to help make this dream come true.

I am seeking information on potential sources of donated or low-cost FM broadcast equipment as a volunteer consultant to Volunteers In Technical Assistance, Inc., (VITA) a well known non-profit non-governmental development organization headquartered in Arlington, VA.

A group in Cameroon has requested VITA to assist them in contacting US sources of used FM broadcast equipment who might be interested in helping communications in the third world. Since I have no knowledge of the market for used FM broadcast transmitters and related equipment I need help in identifying potential sources. Your help in pointing me in the right direction will be sincerely appreciated. Please reply by e-mail to rwhiting@winternet.com. TIA.

SB DX @ WW $OPDX.267
Ohio/Penn DX Bulletin No. 267

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 267
BID: $OPDX.267
August 19, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4CEF, W5IJU & Island News, WB6VGI, NL7TB, DF4RD, DL9GOA & the DX News Letter, F6AJA, G4BUE & the DX News Sheet, JA1IDY, LU1DZ, ON6JG and W. M. Loeschman following DX information.

3V, TUNISIA. The DXNS reports that Eddie, W6/G0AZT, will be active October 9-13th, from 3V8BB. Operations will be mostly RTTY 80-10 meters low power. QSL direct only.

5R, MADAGASCAR. This is just a reminder! Look for Jean Michel, F6AJA, who is visiting Gerard's, 5R8EN, QTH and will be active from August 18th to September 8th. Both will probably be active from Nosy Be (IOTA AF-057) starting August 20th (or 21st) to August 24th as 5R8EN/P. Operations will be on SSB and CW. Jean Michel has taken some RTTY equipment with him for Gerard and perhaps after Nosy Be they will be on the air with RTTY.

7P, LESOTHO. Martin, G4FUI, is active as 7P8/G4FUI on CW/SSB. He will be there until the beginning of December. QSL via homecall.

CY0, SABLE ISLAND. If you missed the CY0AA operation you will have another chance in October. Murry, WA4DAN, plans to be active as WA4DAN/CY0 October 22-29th, which includes the CQWW SSB Contest. There will be other members of the team which include Ken/V73C/AH9C, Bob/KW2P, Atsi/VK2BEX and Ron/AA4VK.

J8, St. VINCENT. Buzz, N5FTR, will be active from September 2-7th. Buzz is going to request a J8 call but may have to sign J8/N5FTR. Operation will be mainly on SSB, but CW gear will be taken. Those wishing for a CW contact will have to be patient as Buzz is "relearning" the code. Operation will be with 100 watts to a Sommer vertical antenna from a beachfront hotel. QSL via Buzz's home call address in any call book.

KG4, GUANTANAMO BAY. Larry, WB6VGI, will once again be active from KG4 land for a 2 week period starting on the 10th of September. Look for KG4ML on the WARC bands (primary bands) and others as requested. Most of the Guantanamo ops use the other bands so the KG4 card isn't as hard to get on these. QSL via WB6VGI CBA.

KH4, MIDWAY ISLAND. By the time you read this, the big AH0W/KH4 operation should have started ands run through the 25th. QSL via KE7LZ. For more details read OPDX.263 and OPDX.265.

LU6Z QSLS ARE IN THE MAIL! Alberto, LU1DZ, reports to OPDX that the QSLs for the LU6Z South Orkney Island DX operation by a CW group from Argentina are in the mail and/or the bureau since 3 weeks ago.

SU, EGYPT. An Egyptian DX net called SU DX Net meets Fridays and Saturdays at 1500z on 14220 kHz. Operators who are usually present included SU1ER, SU1SK, SU1GS and SU3AM.

SV8, IONIAN ISLAND (Greece). SV1DPL and SV1CID plan to be active from this island (EU-052) and several other Greek islands until the end of the month. Activity will be on 160-10 meters. QSL via SV1CID.

SV9, CRETE. Island News reports that Ivan, IK7VEK, will be active August 21-29th, as SV9/IK7VEH. Activity will be maninly SSB. QSL to CBA.

TT, CHAD. TT8SP has been very active over the past few weeks. His activity includes operations on the WARC bands and mainly on CW. Check 18070 kHz around 1630z, 10102 kHz around 2330z and 20 meters (between 14003 and 14019) after 2000z. He has also been heard on 3500 kHz around 0430z. QSL via F5OIJ.

USI (United States Island Award Program) NEWS/ALERT. The North Shore Radio Club (IL) will be activating several Illinois islands on Saturday, August 24th, starting around 1500z and ending around 2000z. Watch for N9LUR, N9CHQ and KF9YL (Fred, Mike and Fred). QSL w/SASE to KF9YL. Only 3 Illinois islands have been activated to date. Stop by on 14260 kHz to help the guys qualify the new islands.
Meanwhile the following stations will be active in the upcoming 2nd Annual W/VE Island Contest (September 14-15th). Details on this contest will be forthcoming in a future OPDXB.

Jim, KA3UNQ, will "rover" from RI-03S, RI-05S, RI-06S, RI-07S (all NA-031), MA-03S, MA-22R and MA-23R.

John/NL7TB and gang will "rover" from WA-063R through WA-066R.

VK0, MACQUARIE ISLAND. It has been reported that Warren, VK0WH, had apparently agreed to show up on 40 meters on 7189 kHz between 0400 and 0830z on Wednesday. Jim Smith, VK9NS, reportedly "EMCEED" the list operations, and comments from him seem to indicate that they may do it again, but he does not know when. Also, Jim mentioned that Warren had been on 160 meters but not 80 to date. Apparently, Warren has been experimenting with new or repaired antennas, and he has been successful.

OPDX will try to keep you updated.

WEBSITES FOR DXERS/CONTEST....
A monthly updated Picture DX Bulletin has been prepared by ON4VT;
it can be found at: http://www.club.innet.be/~pub02749/sstv01.htm

This site will provide mileage and bearing between major world
cities. It will also paint a map showing the two choices.
It is at URL: http://www.indo.com/distance/

XW, LAOS. The DXNL reports: "Andreas, DK9LM, states that the officials
in Laos have several licence applications from DL, UA, JA and PA
operators. Due to the high number of applications Andreas hopes to receive
a positive answer from Vientiane in the near future".

XY, MYANMAR. Reports from Asia indicate that Kan, JA1BK, and Martti,
OH2BH, will be leaving for Yangon (XZ) on the 23rd of August. They
will be joined by Warren, KF7AY. It's not certain if they will be
on the air or not in Yangon, but it does not hurt to listen and look
for them.

-=-
IS THE TIME RIGHT? Over the past few years, several members of the
Northern Ohio DX Association (NODXA) have talked and thought about having
a DX Convention in Cleveland. Now that the International DX Convention
is no longer being held a week before the Dayton HamVention at Visalia,
should NODXA take the step in having the first annual "North Coast DX
Convention/EXPO"? Messages read on InterNet from the DX Community seem
to indicate they want something the weekend before Dayton. Just think
of it, a DX Convention and Dayton Hamvention within a week and a three
and one half hour drive between the two. Cleveland could easily fill
the days between the DX Convention and HamVention with visits to the
Rock-Roll Hall of Fame, Science Museum, Art Museum, Natural History
Museum, Auto Museum, the Cleveland's MetroParks Rain Forest/Zoo and
much more. Maybe Cleveland is ready to have its first DX Convention.
NODXA would like to poll the DX Community on their views and thoughts
of this possible event. We would ask that you answer the following
questions below. Answers can be sent via E-mail to:
ncdxc_expo@barf80.nshore.org

1. Would you attend the convention in Cleveland if it was held the
weekend before the Dayton HamVention (or possibly the weekend
after so as not to conflict with "Mother's Day)?

2. Where will you be traveling from to attend the convention?

3. What type of forums would you attend (technical, DXpeditions, etc.)?

OPTIONAL
4. Would you/group/organization be interested in conducting a forum?

5. Would you/group/organization be interested in helping to sponsor
the convention?

6. Any other comments/input you may have.

Your answers are very important to help us make our decision. Also,
time is an important fact to get the ball rolling on this event.
NODXA thanks you for your input..... 73 de Tedd KB8NW (President of NODXA)

>
>Well, I just received my call sign and am looking at building a
>radio. One of the kits I've seen is by Ten Tec. Does anyone
>have any experience with this company? I would like to hear you
>opinions, good and bad.

TenTec is a good company. They've been around a long time and have
a good reputation in the amateur community, particularly for after
sale service. They've primarily made factory assembled HF gear. The
kit business is a fairly new direction for them. It appears that
they want to do it right. The release of this kit was delayed almost
a year to make sure that it met their high standards.

>The kits may not have all of the features on it, but I would
>like to build a radio. The 2 meter kit for example doesn't have
>DTMF on it, but I should be able to add it on.

TenTec offers the *only* 2m transceiver kit worth considering. It
is, as you note, not feature packed, but what it does, it does
adequately. It *is* rather bare bones, however, and you certainly
can buy more radio for less money by shopping the used market or
taking up the challenge of converting surplus commercial two-way
equipment to the amateur service. The latter are also rather
featureless, but they're also bulletproof performers in high
Rf environments. Most amateur gear, including the TenTec kit,
is not. It costs too much money, space, and power to do that
right, and amateurs wouldn't pay for it. But when you can get
it for pennies on the dollar surplus, it's a great way to get
a high performance radio.

A *good* kit won't teach you much about radios, except how to
recognize parts and how to solder. A *bad* kit is much more
educational since you have to figure out how to fix what's
wrong with it. But that's not what you want when starting out.
So stay away from Ramsey and stick to TenTec, they're the closest
thing to Heathkit we have left. Later you may want to try your
hand at a bad kit. It'll teach you a lot about how *not* to
design a radio. (There are millions of ways to do it wrong,
but only a few ways to do it right. You need to experience
some of the wrong ways so you'll appreciate just how difficult
it is to get it right.)

If this is your first kit building experience, take it slow.
Read everything over several times before heating up the
soldering iron or clipping leads. Study the diagrams and

try to figure out how each circuit is supposed to work. If you are unsure of any step, stop, think, and if necessary ask someone more experienced. This isn't a race, it doesn't matter how quickly you get done. If you're careful, the finished radio should look like it was factory assembled, and work just as well too.

Approach this as a craft project. Make it something you'll be proud to show off to others, and not a horrid kludge that'll make you want to weld the covers on so others won't see your work. Read the construction practices chapters in the ARRL and RSGB handbooks a dozen times, look under the covers of factory equipment, be neat and economical in your work. Take the time to do it right so you won't have to do it over.

Gary

I made an error here. I forgot to include the factor of 2*pi in the
above figures. That reduces the safe distance for controlled exposure
to just 1.38 meters, and for uncontrolled exposures to 3.15 meters.
That's much better.

More like "just wishful thinking" I'm afraid. If this were true,
the results of the Milham study would have gone the opposite way.

Err..... stop sending them? <g>

Seriously though, in this day of electronic signatures and
verification systems, why not institute Net-QSL cards? If we can use
our credit cards over the Net (well, we will soon, with total safety)
then getting QSL cards across the Net should be a doddle for amateurs
with teh technology to get on line.

My pet peeve is A** holes that leave SMART A** comments without
answering a VALID QUESTION.

Rulings have been relaxed to allow CERTAIN types of communications
that result in DIRECT FINANCIAL COMPENSATION for one of the parties of
that communication. It USED to be that even a call to a TOW TRUCK
would have been questionable, since ONE of you was gaining monitarily.
HOWEVER a year or so ago FCC rules were changed to ALLOW this type of
communications. SO **YES** by STRICT LITERAL interpration of the
LETTER of the LAW, you could order a PIZZA - - however MOST repeater
custodians STILL **request** you NOT do so. .(at least the ones
around here) Since this individual or group had PAID $$ for the
equipment / maintainence, I really would suggest that you NOT tick
off the owner ot the repeater.... just to prove a point... but if that
is your inclination, it is within your right. It is my policy to
listen to (NEW) repeaters a while and get a "FEEL" for what is allowed
and what is not.... I guess the question in my mind is TWO FOLD: ? ? ?
WHY would you want to order a pizza or whatever from your two meter?
Even up here in the "STICKS" **CELL PHONES** are only $25/month, and
you wouldn't have to put up with 100 other people listening to your
order and then commenting "GEE, you buying for me too? - - Hey since
you gave your address over the air - we'll just drive over to share
your Pizza - - or if they dislike you perhaps vandalism / injury - -

Use the handheld for EMERGENCY / HOBBY I would be willing to wager
that 99 percent of amateurs that are using their handhelds to conduct
comerce, have access to a regular telephone network, even if they have
to pull over to the nearest curb and phone booth.

We have a gentleman that OWNS a business (real estate) and he would constantly check his CELL PHONE VOICE MAIL using his amateur radio handheld and the autopatch . . . . ?? WHY ?? Finally he was requested to cease by the owner of the (ham) repeater and he did - but the other gentleman around here that owns a painting business STILL blatently checks for availability of his paint mix order over his 2 meter handheld.

Guess the final statement to you would be to MONITOR the repeater and adopt the policy - - when in ROME . . . !

Thanks for the pointer. The regulation looks fairly ironclad to me. HOA's must allow TV antennas and 1m dishes. I think I will mail a copy of this to my HOA and get rid of the old cable monopoly I have been dealing with. At $30.00/mo., a TV antennas with mast and rotor will pay off very quickly!

>Lets all hope they extend this ruling to the Amateur Radio Service.

The legislation was driven by the type of economics thar we amateurs cannot muster. Also, with fewer people using cable, there could actually be more objections to amateur transmissions in these living quarters built in such close proximity. However, TVI and other interference concerns cannot be extected to improve when a law is issued giving free reign to most types of telecommunications. You can argue for a long time that you use your tribander antenna for TV reception (perhaps not the best reception) on the same antenna that you happen to transmit with. That's *if* anyone notices a difference between a TV antenna and a tribander (say a 10/15/20).
Anyways, it's something to try I guess ;)

>Good Luck with the HOA -- mine is hopeless.

I think after reading the regulation that your >HOA< is out of luck. You would have to have special circumstances affecting 'safety' (this would normally apply to tower hieght with respect to the closest adjacent residence, or possible zoning regulations for wind strength in some areas) or you would have to be in a historic district.

If your HOA does not believe the new regulation, or cannot undertsand it, it seems that you do not have to pay any penalties even if they 'fine' you. Like I say, it looks fairly ironclad but then again I am not a lawyer. I still think anyone having to live with one of these stupid antenna restrictions would be fairly safe going ahead and putting up a TV antenna...not much to lose, and a rather clear federal pre-emption to back you up.

Tony, I don't personally have the real answer to that question.
Personal anecdotes, though useful to illustrate a point, tend to
be the horror stories of when things didn't go as planned.

** Once again I am NOT speaking for my employer, Pacific Bell. **
This is just my personal opinion. Not only that, but I'm using
Pacific Bell's e-mail system to post this. -- (kinda awkward)

Central office power is not my area of expertise, I work in Electronic
Switching equipment. Even if it were, I would have to defer to the
official public information types. Getting my foot in my mouth IS
sometimes my area of expertise.

Back to your question: From personal observation, I'd say it's a case by
case decision - when an office switches its load over to an emergency
generator. As with a car battery, it can do damage to allow batteries to
become discharged to a very low voltage. Regular routines test the
ability of backup systems to function. Again, as in a car, an
engine that hasn't been used for a long time can let you down.

It's always a big no-no to discuss, in a public forum, any SPECIFIC
weaknesses or critical components of something as important to us all
as the telephone system. If some wacko wants to attack it, we don't
want to help him figure out just how to do it.

In general terms, reliability is provided in many different ways.
Routine testing and maintenance, as noted above, has always been done.
Various methods of duplication are used. Imagine operating a computer
that can't be allowed to stop, ever. How would you update it and put
new software on line? How do you train new people to work on it, but
not have them "crash" it in the learning process? Suppose it "hiccups"

when you're not there to see it. How do you install an entire new state-of-the art switching system and switch thousands of phones over to it without interrupting service? We do this stuff every day. Technology makes it possible - but people make it happen.

I don't know of any shortwave used in the schools here in Houston, Tx. The last few years I have been involved in the AFS - Foreign Exchange student program. The teachers and sponsors of these kids were just amazed that I could pick up most of their home counties on my radios. I was shocked at their lack of knowledge about radio and internation broadcasts. I like you feel there is a tremendous potential in getting students to use this almost free resource. The few that did know of shortwave thought the equipment was very expensive. I purchased a little portable from Radio Shack for $100 for the student from Paraguay who was living here, and she listened to home most evenings for the news. She also took it to friends so they could listen to the news from home, she became very popular with the other exchange students.

Hopefully some of the sponsors and teachers will get radio's of their own. I did all of my geography reports and sociology reports by using radio broadcasts and writing the stations for more information. Of course then I kept my sources secret from the other kids.

Hello there,

I have used the B&W 3.5-30 for several years. This is the earlier version of the model that you stated. It is a folded dipole. The antenna works great and I have made several thousand contacts with it. The SWR is fine throughout the bands, without and problems.

It is not as efficient as a dipole for every band, but does show gain on the higher freqs, and loss on the lower freqs compared to dipoles. However, if you want one antenna that can cover everything with not problems, this is it.

The military uses these for many applications, especially for Special Ops in remote base camps.

I wonder if you let the freezer sit idle before you started to try the
generator. The don't like to start under compression, and need to have the
refrigerant de-compress before restarting.

There is a 30kw generator for sale near here. It is designed to be run from
the power take off shaft of a farm tractor. Mounted on a small two wheel
trailer. About the size of a large lawnmower.

to many $$ at 1650 for me.

Well...technically no. Unfortunately it still isn't OK. But if I were a control op on a machine that had a patch available I might ignore such a violation. That would be wrong on my part but in THIS example I'd take the heat if any were dished out.

Such a call would still only be in your own and your employer's pecuinary interest. It would not be an emergency communication.

1251. RF exposure/balanced line/inverted vee

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-19 00:00:00 UTC
From: pklein@news.seattleu.edu
Message-ID: <4vaf02$6ab@handel.seattleu.edu>
Source record: 218612
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

The ARRL RF Safety guidelines mention that we should avoid using open wire line to minimize RF exposure.

For years, I have been using 300 ohm outdoor twin lead to feed various inverted vees. I used ladder line at first, but it tends to break. From what I've read, 300 ohm tends to confine the radiation to between the conductors rather than creating a field around them.

Am I correct that using 300 ohm twinlead might create less RF exposure than 450 ohm ladder line? And would using a Matchbox-type balanced tuner do a better job of minimizing line radiation than a T-match and balun tuner? I currently use an AEA AT-300 which is a box slightly bigger than an HF transceiver. It contains 2 coils and one variable capacitor, thus:

```
4:1
Ferrite---
Coax in-- L1--+---L2----Balun-----Balanced out
+ |
|
Gnd C1
|
Gnd
```

Now of course, my feedline is not symetrical with respect to the antenna. The only way I could get something long enough to work on 80m well (102 ft) was to run one leg of the inv vee from a ~35 feet up a tree at one side of my backyard back, to my shack window. The feed line goes down the tree to a height of about 7 feet, then under the eaves to the window, thusly:

```
/|\
/ || \
/ || \
/ || \
/ || \
|+------+
| feedln+-- shack
Tree
```

I have a feeling I'm going to have to move it to be incompliance with the big bad new environmental rules. I'm also running an R7 vertical just over my roof (base of ant. at about 23 feet). Then I also have 10db circular satellite beams at about 28 feet, on an 8' roof tower.

Am I going to have to move all my antennas to run 100 watts and still be in compliance? Information so far is kinda sketchy, and you have to wade through 50 pages of bureaucratese to find it.

So, Cecil and other antenna mavens, what's da scoop?

73,
Peter - KD7MW

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/~hamradio/callsign.html

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee

if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license
or a copy which was issued on or before 3/21/87 is acceptable by VEs.
VECs may be able to allow such credit based upon an original CSCE
issued on before that date which shows Element 3 credit for passing
the (then) 50 question Technician/General written test. If such
documentation has been destroyed, the FCC will itself issue the
necessary verification. To obtain such verification, acceptable
by all VE Teams and VECs, write to FCC and request a "Letter of
Verification of Technician License Held Prior To March 21, 1987".
Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd,
Gettysburg PA 17325-7245. If you include reference to a fax number
in your reply, the FCC will fax your verification letter to you.
Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT

PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-832-6803

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, (n) 301-317-7819 or 301-588-3924

M = The Milwaukee RAC Inc., PO Box 25707, Milwaukee, WI 53225;
414-466-4267.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068-0011; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926.
No fee.

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000. The 1996 test fee is $6.00.

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
910-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 423-688-7771. The 1996 test fee is $6.05.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1996 test fee is $6.05.

ftp://ftp.coast.net/Coast/win3/hamradio/imcpw311.zip
imcpw311.zip Morse code tutor with Farnsworth code option
318329 bytes

IMCPW (International Morse Code Processor for Windows) v3.11 is a Windows 3.1 & 95 compatible program which translates program-generated/user-defined text and text files to Morse code. Code speed is adjustable from 3-50 wpm with a character speed of 10-50 wpm for Farnsworth code. This is an excellent tool for learning and maintaining one's Morse code skills. Includes a comprehensive help facility, a main menu and popup menu, and eleven code practice lessons. It is Fully customizable from the Options menu. A Sound card is not required. Requires 692K of free hard disk.

IMCP has no special setup or configuration. Simply unzip the file, copy the files into a subdirectory of your choice, except for the files HITIME1.VBX and BIVBX11.DLL, which should be copied into the WINDOWS\SYSTEM subdirectory, and set up a Program Group or simply add the IMCP icon (earth.ico) to an existing Program Group.

Once installed, to quickly see how the program works,

o Execute file IMCPW.EXE.
o Click on title screen or wait 8 seconds.
o From main menu, select File|New.
o From main menu, select Translate|Text.

Changes: IMCP now has an adjustable character speed of 10-50 wpm for Farnsworth code. Eleven code practice lessons have been implemented.
Also some minor enhancements were made.

imcpw311.zip replaces imcpw31.zip

See README.WRI or IMCPW.HLP for information about license agreement and registration procedure.

Fantasy? RF is used all the time in medicine. Tell that to the
Chiropractor that totaly screws up 10m with his massaging wand. Uses
RF in the 27-28 MHz band to warm tissue deep inside. Tell that to my
Dentist who used an 'Radio Scapel' to trim back my gums the other day.

>show 1 in 4 women will suffer from that form of cancer. But let's please
>keep emotion out of this ruling. Self-denial that RF cannot cause illness
>will only hurt yourself, but coming on here and stating that to hundreds
>of thousands of folks is irresponsible.

No self denial. It would be irresponsible to keep quiet and bend over
for crap like this. They show proof that it harms, and how, then we
will worry about it. I thought we stopped using 'blood-letting' as a
treatment a long time ago, what they sugguest is the same thing.

'We don't know what it is, or if it is at all, but slit their rists
and let some blood out just in case.'

When did Part 97 start requiring people to use the lowest power setting all the time? I believe you're referring to 97.313(a), but you're apparently misreading it. 97.313(a) says "An amateur station must use the minimum transmitter power necessary to carry out the desired communications". There is a difference between 'minimum transmitter power' and 'minimum transmitter necessary to carry out the desired communications'.

I don't disagree that minimizing RF exposure is a good thing. I just don't agree with this reading of Part 97. Using the lowest power setting without regard to the ability to carry out communications might be considered 'liddish' by some ;-).

I used the B&W 3.5-30 also and was'nt satisfied with it so at one point I
ran a nearly side by side comparison with a G5RV and found the G5RV to
perform consistantly better. The biggest difference was on 80 meters. I
think the biggest benefit of the B&W is it's flat SWR. The two are very
close in length. The B&W was VERY pricey. My recommendation would not be
as glowing...

> Need to put some stabilizer in the remaining gasoline?

Scott-

You can change the gas in the tank, but it isn't as easy to drain the stuff sitting in the carburetor. (You would need to turn off a fuel valve, and run the engine until it ran out of gas.) I think residual gasoline in the carburetor, is what needs stabilizing most.

I started with a Coleman 2250 generator. It probably would have done all I wanted, but the neighbors got very mad whenever I ran it. I then got a heavy duty B&S muffler, but it was still too loud, and reduced the engine power. Fortunately, K-Mart has a good refund policy.

My vote is for the Honda line. Choose the one that meets your power needs, and it will probably be the quietest one in that class. However, it costs about twice as much. I've had an EX-1000 for a couple of years, and the only problem had been a cross-threaded oil-fill cap.

a
>Republican.

Is there a real difference between socialist and democrat?
Let's see:
Socialist: Government is in control of everyday life.
Democrat: Government knows best, you can't do it on your own
so we'll pass a law.

Socialist: Everyone is entitled to paid medical coverage.
Democrat: Let's provide free health care.

Socialist: Everyone is entitled to a job at a good (fixed) wage.
Democrat: let's raise the minimum wage by 90 cents.

Socialist: Everyone should be employed somewhere.
Democrat: You have to give THIS person over THAT person because
WE descriminated against THIS person's ancestors.

Socialist: Society (we) are all entitled to a "good" living.
Democrat: Tax the "wealthy" and give it to the poor/non-working
(welfare).

The all seem the same to me. ;)
For the humor impared the above was meant as a joke.
(the basis of much humor is truth)

The one person that responded to "The Burt Challenge"
was a no show this afternoon on 14.345.

A man went to a guts store to get some guts for dinner. He sees a sign
remarking on the quality of guts offered at this particular gut
store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

Unfortunately, your emotionally charged arguement is all you have to
prove your point that regulation is needed to the level it has been
applied.

It would be much better if we could ignore the people who wanted
to pass laws based on ficticious or emotionally founded fantasies.

Every so often the government does that, goes out on a "jag". They take
some information that is normally quite emotionally charged and use
it to pass laws that far surpass the need.

A good example was the "fact" that 50,000 children a year are abducted
and we needed new laws to stem this tide. They passed a bunch of new
laws, citing the dopey figure, without ever considering that it was
a lie. The laws remain to show how harmful a well-meaning but terribly
misdirected group can do.

> Be safe,
> Jeff KH2PZ

With the 2.5 watts my little HT puts out, I get into some of the
repeaters in the area marginaly, others not at all. With the 5 watt
pack, I get into most of them full-quieting, some of them marginaly.
I comply with part 97 in this respect.

When it comes to simplex use, it's a different story. With my Gp-9, I
can use the 30mw setting and make contacts in Mesa which is 30 miles
away. So my "KH2PZ incorrect" 2.5-5 watts is not necessary.
And to get right to it, there is no provision given, with respect to
the rule you mention, on any of these commercially available HTs to
comply. Think about it, if your power is adjusted in steps, and you
can operate with a lower output then that povided by the radio's
settings, are you in violation or not? It says minimum power
necessary, not minimum power setting on the radio.
And one other thing, I don't know what rock you live on, and whether
or not you have to deal with intermod, but squelch'es are used at a
high setting here in Metro Phoenix.

Don't make any assumptions as to my operating practices or proceedures, as I will (or would) not make any of yours. But it seems that when you are presented with reasonable debate, you resort to attacking the person and not the subject matter. Frankly, that in itself is not amateur like.

You mentioned part 97 at the end of your last post, mixed with the subject we *were* discussing. It appeared to me that you were implying that this EPA crap (which is now also part of 97) was the basis for you advising that HTs be held at arms length at minimum power. Thus accepting the regulation as being valid and worthwhile. I obviously disagree.

If you want to keep debating the issue, that's fine. But keep it on the level of subject and not assumptions. Ok?

Rob Neff (N7ORY)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 AUGUST AND FORECAST FOR 20 AUGUST - 22 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 18 Aug
Daily Proton Fluence >1 MeV: 6.9E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 4.8E+07
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Aug 21 Aug 22 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Aug: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 18 Aug
Learmonth 6 2223 1111
Fredericksburg 6 6
Planetary 5 5

Observed Kp for 18 Aug: 1103 2211

2B. MAGNETIC FORECAST
Date Ap Conditions
20 Aug 6 Quiet to unsettled
21 Aug 6 Quiet
22 Aug 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
19 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
20 Aug Normal Normal Normal
21 Aug Normal Normal Normal
22 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
19 Aug 1

Observed Australian Regional MUFs:
Near predicted monthly values observed at Townsville, Sydney
and Hobart, with some spread F observed during local night
at these stations.
Darwin: Depressed 15 - 30% during the period 00 - 07 UT,
otherwise near predicted monthly values. Some spread F
and sporadic E was observed during local night.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
20 Aug 10 near predicted monthly values
21 Aug 10 near predicted monthly values
22 Aug 10 near predicted monthly values

The other bad problem with many of those old switcher power supplies is
that they generate a lot of RF hash!

ehoffman@total.net (Big Boy) scribbled:

|I have a old crap 8088 'tole box' as you can say! With the power supply.
It's
|rated 7Amp at 12 Volts but i'm wandering if i can use it to supply my mobile
|(used as a base) 13.8V tranceiver unit. I dont know much of switching power
|supply technology and i want to know if it's safe. The problem may be when i
|switch from RX to TX and from TX to RX... could there be a fatal burst of
|voltage? Or peraps with a big cap, like 22 000uF, at the exit i can control
|those peek?

|Unfortunately, i dont have an scope to make charge test.

|E-mail me on that please...

I haven't seen the bureaucratic documents, but I doubt that your feedline is producing a stronger field than the dipole.

I expect there are very few installations that have the feedline at a right angle to the antenna all the way to the rig. The angle of your feedline will probably create some imbalance on the feeders, but a typical antenna tuner is not going to correct that.

I doubt that a Johnson Matchbox is going to show any significant improvement over an unbalanced tuner with an "RF TRANSFORMER" (NOT A BALUN) on the output of the tuner.

NOTE: See posting "Balun VS RF Transformer" for when to use a Balun and when to use an RF Transformer. If it is not on your news list, use the

http://dejanews.com

search engine to get it.

There's one piece of critical information missing from this thread.
PC power supplies regulate the 5V output. The 12V output is whatever it
is. For typical PC loads it all works out right.
If you try to run the 5V unloaded, there is not enough energy in the
core
to give full output on the 12V port.
So, you need a load resistor on the 5V output to make sure the 12V
supplies enough current for full load. You also need a load resistor
on the 12V output to insure it stays in regulation when the external
load
is off.

> repeaters in the area marginaly, others not at all. With the 5 watt
> pack, I get into most of them full-quieting, some of them marginaly.

Hmmm, strange, 2.5 to 5 watts is only 3db. 3db is only 1/2 an S unit,
certainly not much if any practical difference.

I'll have to double check at the office but I am 99% sure that the
license is still required for internal adjustments or repairs to
transmmitters in the aviation or marine service (including VHF-FM marine
on inland waters).

That is for transmitters. Many avionics are not transmitters - but for
the purpose of signing off any maintenance, I believe, you still have to
hold a FAA Radio Repairman Certificate (in addition to the GROL for
xmtrs). Don't hold me to that stuff as I don't service any avionics - I
rent airplanes and just want the boxes to work. However - I will work
on the VHF in my boat if the need arises.

Unless a change slipped by me in the last year or so.....

For aircraft: Part 87.73 Requires all transmitter adjustments and tests
during installation, servicing or maintenance of aviation stations be
completed under the direct supervision of a licensed general
radiotelephone operator.

For marine: Part 80.169 places about the same requirement on marine
transmitters. Except that 1st or 2nd class radiotelegraph operators
also qualify. Those telegraph operators are the only ones authorized to
work on marine radiotelegraphy stations. A radar endorsement is also

required for work on ship radar.

Yes, Their is,
its called E-Z Clone. Right now it supports The Yaesu FT-51 software and Hardware. Also supports the Kenwood TH-79 in the software but the hardware is not quite ready yet. One year free software updates. The interface and software sell for
$40 plus $5 shipping and handling.

for Publisher.
==============================================
To all Electronics Companies, Service Person-
nel, Webmasters & Hobbyists,

I am preparing a book tentatively titled "Sam's
Internet Guide to the Electronics Industry", to
be published by Howard W. Sams & Co. and PROMPT
Publications. The book will contain site add-
resses for electronics resources. Companies,
organizations and individual web creators are
encouraged to fill out a simple FORM at the ad-
dress below.
-----------------------------------------------
http://web.idirect.com/~ifx/book/
-----------------------------------------------
In addition, any electronics related addresses
or resources you run into while surfing please
let me know by filling out said form.

If you lack FORMS capability send an email with
the info below. I am especially interested in
sites offering simple electronics repair data,
service specs and hobbyist help-pages. Other
resources are more than welcome. Top Urls will
be printed in this directory and updated in
future issues.

Respond via E-mail to:
postmaster@originating.domain

something similar to:
To whom it may concern:
The article pasted to the bottom of this note was posted to
rec.radio.amateur.misc by one of your users. Not only is this article
off-topic, it is a promotions for a chain letter. Chain letters are
most definitely unlawful persuant to Title 18, United States Code,
Section 1302, the Postal Lottery Statute. For further details please
refer to:
http://www.usps.gov/websites/depart/inspect/chainlet.htm

If this post did originate from your domain I must make some
requests of you.
1 - review the user's posts and issue cancels for all that are
in this vein. Chain letter promotions are seldom if ever made to just
one newsgroup.
2 - take appropriate action to ensure that the user will make

no similar posts in the future.
3 - notify all users within your domain that such posts are
inappropriate and potentially unlawful.

thank you

Paste a copy of the offending post complete with all headers
to the bottom of your message and hit the send key. Unfortunately this
is after the fact and action by the SysAdm only prevent further such
posts from the same user.

I am selling out of HF.
On the road 2 meters is free and good for safety and directions.
Also I like to spread the "word of Burt."

I would solicit recommendations for a new HF radio. Mine was fried by
lightning. It was a TS440-S/AT and the replacement is a TS450-S/AT but
am considering an upgrade to the TS870S. Does anyone use that radio
and what do you think?

1294. Installing 2m in new Toyota Tacoma

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-19 00:00:00 UTC
From: Steve Hawkins <sjhawk2@ptes.com>
Message-ID: <32187275.6E95@ptes.com>
Source record: 218701

Has anyone out there installed a 2m radio in a Toyota Tacoma. I just bought a 1996 Tacoma and I am interested in where you mounted the radio and where you brought the power through the firewall. I would also like to know what kind of antenna you use and where you mounted it. It looks like I might be able to temporarily remove the brake light above the rear window and drill a hole in the roof behind it to mount the antenna. Then snake the coax between the head liner and the roof over to the left rear corner of the cab and then down and out near where the seat belt fastens.

Please E-mail any experiences you may have to sjhawk2@pacbell.com

Thanks You very much. de Steve Hawkins WV6U

>73, Lawrence GJ3RAX

The fact that you don't collect the QSL's is no reason not to confirm
a QSO as long as the other station will at a minimum generate a card
with the QSO information, and provide a return envelope with the
necessary postage in the form of IRC's or greenstamps. All you have
to do is sign the card to confirrm the QSO. You simply need to inform
the other station of your requirements. Not to much to ask! IF they
don't provide the above after you have informed them,....then they
don't deserve the card. The QSL is the final courtesy.

attention all amateur ops!!!

we are starting a major compilation
project of amateur radio operatr e-mail addresses,,
in order to create a web server devoted to the access of amateur
radio operators e-mail/internet addresses by the input of a call
sign.

much help is needed by the amateur community in the
development of this project,, please let your fellow ham know!!
in order to be included in this world wide database you must send
your name,, callsign and internet address!!,, that's it!!

at the completion of the database ,, in order to access a fellow
operators internet address,, all you will have to do is input the call
sign,, and if they are in the base you will be given the internet
address,,, thank you all for your help in this monumental project,

send your name ,, call and internet address to-- radiop@ix.netcom.com
for inclusion in the database

thank you mike,,,n2ucm,,,,73's

A terribly misdirected group. May be so may not be so. Do you have any facts to show that rf is harmless. Have you ever been in the near field of a broadcast antenna at 1KW even. I have, not the facts or figures, but by personal experiance know that the inner ears heats up at a frequency of 1450 Khz and 1000 watts if you are there for any significant period of time (ie. 30 minutes or so) Granted, amateur transmissions are usually short, but would you like a 4 El beam being fed with 1.5Kw pep rf pointed at your house???? I think not if it were your neighbors antenna. Do not poo poo the harm that non-ionizing radiation may or may not do. It is best to treat it with a little respect and use good engineering practice at all times. Hey, a well meaning, but misdirected group got a law passed because no one else has been able to prove them wrong with hard facts and figures. I for one, after spending a few years in the position of a chief broadcast engineer, treat an radiation, non-ionizing or otherwise with respect. remember your microwave oven operates in the middle of on ham band a about 1.2 gigahertz or so. And it cooks things very swiftly. Agreed it is not 3.9 Khz or 7.2, but it may be that the only differance is the power level and the exposer time?? who know for sure. I don't and have met few rf engineers that are sure. Who wants to be the test dummy for this one fellows. Do I hear any takers?

Wrong again. I made the repeater & operate it often but it is under
another callsign & control operator. It isn't being operated as my
repeater. Mike Scott always uses his address because he DOES have
an internet address, unlike me. If I had one, I would use it.

> Callsign: KA0SSF

HAHAHAHA, hell ALL my repeaters are made from COMMERCIAL FM equipment
either Motorola or GE. (mostly GE Mastr series)

You are a fool Jeff. If I had an internet address I would use it but
I don't. You SHOULD know this as you & I exchanged e-mail earlier this
year from my fidonet address. (remember, I don't have a internet
address)

But it is "YE OLDE FAHRTZ" that control the ARRL. This results in the
ARRL's tough stance against relaxation of the Morse requirements.

Remember, not too many years ago, the ARRL was adamantly opposed to the
creation of the no-code Tech license.

And the ARRL is supposed to speak for the interests of all amateur
operators. Uh huh. Sure. If you believe that, I have a beachfront condo
in Wyoming that I'd like to sell you.

can't agree with you here Gary. I'd love to send everything direct but the budget doesn't allow it. Yes, I know, hams
spend 1000's of dollars for equipment but when it comes to a stamp, they're cheaper than a vo-tech teacher
on Cape Cod. However, if you think about it, 2 bucks here, 2 bucks there, here a buck there a buck, everywhere
a buck buck..adds up quickly. So therefore the buro.

I do take pride in my contacts but economics sometimes overrides quick abit more.

just a thought

One MEOL official did try to take action against me last year for a non
MEOL post.
He made an apology.

.
> I am posting this from my office so you might want to complain
> to my employer if you disagree...

Belive there are plenty that would take you up on that.
Hams have no decency, sometimes.

They so have guidelines.
I do not post from my MEOL account nor do I post from work.
So you have no standing to complain.

That sounds reasonable. It's certainly safer to eliminate the
line than to risk injury from imagined dangers.

>For years, I have been using 300 ohm outdoor twin lead to feed
>various inverted vees. I used ladder line at first, but it tends
>to break.

Radio Works (among others) sells 16 gauge, stranded-conductor
ladder line that is VERY tough. If you're really concerned
about breakage, they also sell a special strain relief for
attachment to the dipole.

>From what I've read, 300 ohm tends to confine the radiation to
>between the conductors rather than creating a field around them.
>
>Am I correct that using 300 ohm twinlead might create less RF
>exposure than 450 ohm ladder line?

I suspect the actual operating conditions will have a much
greater impact on this than spacing, at least below 30 MHz.
Frequency of operation, current balance and power level are the
first things that come to mind.

>And would using a Matchbox-type balanced tuner do a better job
>of minimizing line radiation than a T-match and balun tuner?

The answer to this depends in part on the antenna. If you use
a 1:4 balun to feed 300 ohm balanced line and the antenna is a
resonant folded dipole, balance should be very good. Likewise
for a 1:1 balun, 75 ohm transmitting line and a standard dipole.

The problem occurs when the operator attempts to drive a non-
resonant antenna this way. The impedance seen by the balun is
often outside its capabilities, resulting in poor balance
(i.e. feeder radiation) and/or power loss in the balun.

>I currently use an AEA AT-300 which is a box slightly bigger
>than an HF transceiver. It contains 2 coils and one variable
>capacitor, thus:
>
> 4:1

> Ferrite---
>Coax in-- L1--+---L2----Balun-----Balanced out
> + |
> |
> Gnd C1
> |
> Gnd

I would not use this system to drive a non-resonant antenna unless specific measures are taken to provide a reasonable impedance to the balun. I'm not overly concerned about RF exposure, but feeder radiation can create RFI that can be very difficult (or impossible) to resolve. It can also cause grounds in the shack to carry enough RF to burn the operator.

>Now of course, my feedline is not symetrical with respect to the >antenna.

The situation you described is certainly not ideal, but I wouldn't worry unless you have problems such as RFI or noticeable shack RF. As far as I'm concerned, these are the primary reasons to minimize feedline radiation in most installations. Of course, some installations may also require minimal feeder radiation in order to extract the Nth degree of performance from the antenna.

>I have a feeling I'm going to have to move it to be incompliance >with the big bad new environmental rules.

I haven't read these. Can you point me to a source on the 'Net?

Gentlemen, and I always use the term loosley as I know how I amc
Compliance with any rule or law is needed in a society of strange
creatures the likes of wich we indeed are.

Seriously, can any of us state without a doubt if non-ionizing radiation is
harmful or not???? Folks in the past thought that driving a car on a
sunday spin or sight seeing trip was safe also. Just look at the record

of peoples killed in auto accidents to shoot that theory down. I know, it isn't the same thing, but no one can tell us yay or nay if radio waves will do permanent damage to your neighbors or not. So why not take that extra precaution and put together a system that has preventative measures in the first place, then later on you may be one of the few amateurs still operating out there. Another thought entered my mind (hmmmmm, musta left my mouth open again and one of those pesky things snuck in) about something called "good engineering practice" when building any piece of gear. You wouldn't leave your high voltage tank circut un-protected so that a member of you family could stick a finger in it now would you. (the question is, does the electricity kill you or is it your reaction to the high voltage that does the deed?)
Just a few thoughts from a former broadcast engineer that went through this 10 years ago. (including having to try to deny access to surrounding public lands adjacent to the 100K FM transmitter site.) Wether we agree or disagree with the rules, remember, the FCC and EPA and local and Federal government make the rules and can shut you down right or wrong if you infringe upon them. Also, by having a national standard we will be better off than if every Tom, Dick and Harry has a differant standard that we have to try to follow. So there is no cowardice in following the rules to protect your own hide from bureucratic invasion into your shack and the removal of your equipment and some of your hard earned cash from your person.

The National Loser Test

If you answer yes to ANY of the following questions you are a loser:

1. You hit your spouse.

2. You are a child molester and think you ought not kill yourself.

3. You ever drove drunk.

4. You are a typical ham radio operator.

5. You take illegal drugs.

6. You cheated on your spouse more than once.

7. You are in jail for a criminal conviction.

If you answer YES to three of the following you are a loser:

1. You are divorced and think you are not at all at fault.

2. You are fat and think it is not your fault.

3. You think alcoholism is a disease.

4. You are on welfare

5. You hit your children.

6. You are "living with somebody."

7. You use profanity frequently.

8. You own a gun "for protection" but do not live in a dangerous area.

9. You subscribe to Penthouse et.al.

10. You are proud of being a homosexual.

11. You are a member of N.O.W.

12. You smoke.

13. You dye your hair

14. You do not defend those that you agree with for fear you will not be liked.

15. You prefer doing anything over being with someone you truly love deeply (i.e. soulmate).

16. You are two faced.

15. Did not graduate high school

3 yes= smalltime loser
4-6 yes= moderate loser
7-10 yes think about Dr. Kevorkian
Over 10 yes= act on Dr. Kevorkian

Please feel free to add your own.

Burt Fisher you are a PUSSY so shut the fuck up.

You are dumb too.
------------------End John Mackey KA0SSF's anonymous post--------------

That particular post came from onyx.indstate.edu with the Organization
line reading "Myself & I-2." Your current "I own the Portland .435
repeater" came from biosys.apldbio.com with the Organization line also
reading "Myself & I-2." Both articles contain the address
suprise2@where2.edu, only this time you were actually dumb enough
to sign your name and callsign. I guess we should allow the possibility
that someone forged your name and call ("yeah, that's what happened")
but I believe that the accused is burdened in proving their innocence.

Prosecution rests.

Jeff KH2PZ

P.S. Any licensed ham can become a rptr owner - there's no virture
in that - and practically any transceiver can be made into a crude
rptr. Thus, you hold no special significance in the amateur community; but
now among the internet community you are scum for not having the courage
to use your real address to accompany your remarks.

Although I disagree with most of Burt's posts I must respect
his right to state his ideas and opinions. Burt does NOT post to this
newsgroup or any of the rec.radio newsgroups via his Massachusetts
Education On-line account, he uses his personal accounts. I seriously
doubt that the MEOL administrators would have any justifiable reason
to take any action against Mr Fisher concerning his posts made via
non-MEOL accounts.
They like you and I might not agree with the content of the
posts, but they will respect his right to have personal opinions and
his right to state them using a personal account. If Burt was posting
via his MEOL account, complaints might be justified, but he doesn't.
I am posting this from my office so you might want to complain
to my employer if you disagree...

Ooh, I have. I was silly enough to use a length of 2" dia pvc tube, grey
in colour, as a former for an atu coil. It didn't like being there, got
hot, and tried to leave the box though the holes in the bottom.

It is my understanding that the "OLDE FAHRTZ" have little to do with this
issue. It is, I believe a result of ITU treaty negotiations worldwide.

I received a shipment of QSL's from the W0 Bureau last week and included was a card for K0ZM. The QSL was from JA7MGP for a QSO with K0ZM back in 1981. I thought that rather than return the card to the BURO that I would contact K0ZM to sent him the card directly. Unfortunately I am unable to locate this person using the Whitehorse callbook CD ROM, QRZ, Buckmaster, etc.. Was this call ever issued? Is the holder a SK? If anyone can help me with info regarding K0ZM, I'll be happy to pass it along to Toshi. Thanks in advance for the help.

After reading all the comments that were placed to your post, I now
realize why ham radio is rapidly becoming as trashed as CB has.
The courtesy indicated by each and every reply to your post, proves
that courtesy is now non-existant in the ham bands.

The solution to waste is quit using bureaus and mail direct to the
intended party.

Those who don't take PRIDE in their contact's ALSO do not take PRIDE
in the hobby and it shows by their comments, attitude and usually
discourtesy on the bands.

The problem is that you can't PRACTICALLY enforce the rules to the
extent
needed. Hell, it is LEGAL to swear on ham radio as long as you are not
doing so during prime hours or offending the normal listeners.

I operate the 147.435 repeater in Portland & have similar users
to the San Francisco & LA systems. We are providing a BADLY
needed service to the ham community by giving refuge to
the undesirables & helping keep the other system cleaner.

Unfortunately, there are to many anal retentive LIDS that
do not understand this.

Ref: Environmental Impact Reports...

Over the years, we have noted that there is a group within the
Environmental Agencies that tends to go bananas! To acquire
funds to increase staffs, set up new departments, etc., these
groups will go to any lengths to stampede the people, members
of Congress, into a tizzy! This is all intentional...they do not
necessarily know that anything is wrong...not enough data,
not enought testing, etc.

Sad situation, in an Agency as important as this one, that we
have these "whackos" still embedded there. They need to
be purged, their agendas are not in line with the real world
needs of an Agency of this importance. Out, out with them!

Recently, the "hole" over the Antartic filled in...ozone
has returned...years ago, some "real-world" Nasa scientist
warned the "whackos" of the Environmental Agency
that their statements were premature and not substantiated
with known historical fact...nor was there sufficient historical
data to make such a statement....however, the "whackos"
message was widely spread by the "media"...it was pronounced
as "fact"...nothing could be further from the truth! We all remember
the hue and cry...the sky is falling..the sky is falling..disaster..
more funds..more funds! Sick situation..sick..sick!.

Leonard...

1338. What's our state of the art?

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-20 00:00:00 UTC
From: pgsperseng@aol.com
Message-ID: <4vcr7m$42i@newsbf02.news.aol.com>
Source record: 218579

Hi gang,

I'd like some suggestions for a piece I'm writing.

Specifically, I'm the editor of Personal Engineering & Instrumentation News, and I plan to write my lead editorial in the October issue on the topic of ham radio. What I'm trying to do is break down the stereotype of an old fart sitting in front of a CW key or mike on the HF bands on a ragchew. I want to show my readers (all of whom are scientists and engineers) that we're doing some really nifty state-of-the-art stuff...that we're still the experimentors and innovators of old...that the hobby can present some interesting technical challenges.

So, what is the state of the art? What kind of unusual attention-grabbing things are we doing? Remember, I'm trying to grab their attention, so I have to present the examples in a non-esoteric way and come up with a few that really give the light-bulb effect (gees, hams can do *that* !!??!!)

Just off the top of my head (I'm only starting to think about this piece), things that come to my mind include:
* conversations with MIR and other space vehicles
* satellite operation (actually becoming pretty commonplace)
* moonbounce
* international packet networks.

I'll have room for only a handful of examples, but I'm wondering what *you'd* put in if you had the chance?

Thanks for any suggestions,
Paul, AA1MI

>certainly not much if any practical difference.

As I recall (it's been too many years to be sure) FM is subject to what
used to be called the "thershold effect" where a small increase in
received signal will make a substantial difference in perceived noise.
This is what gives rise to the "quieting" effect mentioned by the
original poster - as in full quieting.

So, it seems your observation might be correct for someone running
SSB phone but not FM phone. Don't know about ACSSB.

Nope, you're I'm not going to let that one slide by. There are too
many other factors that could lead to the onset of cancer in Amateurs.
PCBs, work hazards (a lot of hams are in high tech jobs) etc..
Statisticly speaking, statistics don't work. They are only as acurate
as the intent and will of the statistitian.

>The frequencies where (RF heating) exposures are most harmful to humans

>strongly to the human body. That doesn't mean we can treat exposures

Couple? I suppose the good doctor had a flesh-dip meter? (GRIN) Did
he find that the subjects exhibited lower SWR characteristics when
loaded up for 30-300 Mhz operation vs. above/below?

"Well, we're not sure on this guy. Couldn't get the Gamma match to fit
on his arm, and he complained about where we put the SO-239."

>at other frequencies casually, but the evidence does indicate that
>higher or lower frequencies don't couple as strongly to the body.
>Therefore a higher exposure limit for them is tolerable.

I would much rather have a 20m antenna 10 yards from me, lit with
1.5kw then a 2.5gig magnetron at 750w. I wonder why microwave ovens
operate on the bands they do and not on 10m and 2m? And you say the
higher freqs are more subtle with regards to effect and heating? I
don't think so.

"Since the EPA regs were added, a lot of the guys who run QRO call a
QSO 'OM-BBQ'"

^^^^^^^^^^^^^^^^^^
Always looking for a reason. All in the name of safety. Never any
proof. Statistics are not proof, they are an indicator.
You can get one set of stats from the media, and read something
completely different from the MMWRs from the CDC!
(Morbidity and Mortality Weekly Reports)

EXAMPLE:
Like the 'assault weapons' crap. You hear how they are the preferred
weapons of criminals, and used in the majority of deaths in the
country. Then you read the Governments OWN statistics, you find out
that 'assault weapons' contributed to about .8% of total gun violence
in the US. (Firearm inflicted injury, 1995)

>but the mechanism isn't understood yet. Athermal effects have been
>most noticed at lower frequencies, particularly when those frequencies
>are pulsed at a low rate, IE in amateur radio that would correspond
>to OOK Morse style signals. In vitro studies have shown changes at
>the cellular level when exposed to fairly weak pulsed RF fields.

Oh no! An excuse to get rid of CW? (GAG)

>In particular, pulse rates in the 5-10 pps range have been shown
>to cause abnormal chromosome division. This is usually taken as an
>indication of a cancer causing agent at work.

Maybe this is the secret to evolution? If we didn't have small changes
in chromosomes, we probably would not exsist. And if we did, we would
probably all look exactly alike. I wonder what measurements are made
with respect to the amount of 'natural radioation' we receive on a
daily basis? The effects of cosmic rays on human development?

There has been a lot articles recently that contain obscene/filthy words (four letter specials), garbage that isn't approprate and reflects poorly on the *hams community.

While that kind of language is tolerated on USENET newsgroup, IT DOES NOT HAVE ANY PLACE IN AMATEUR RADIO NEWSGROUPS!

If you must use that kind of language, written or oral, do it someplace other than amateur radio newgroups. A likely place would be alt.garbage.mouth.filth You might find someone that likes it.

My .02 cents.

Um, this is yesterday's solution. Back in the dark ages of the internet (18 months ago) I used to use a book called the internet yellow pages. With the advent of the search engine (Alta vista, Lycos, Deja News etc...) it is easier and quicker to do an online search.

Good luck, I think you will need it.

>Jeeze Chris don't you recognize irony when you read it. I got a giggle
>out of this post and I'm sure Jim did also. Perhaps even a few others
>of the less humor impaired.

"Sarcasm" is what you meant to say...not "irony". None the less, sarcasm and tounge-in-cheek humor dont work out too well in written form. Anybody on the 'net more than a month would know this.

>>I suppose thats why Gerry contacted my employer in an effort to get me
>>fired over my posts to Usenet.

>Chris,

>Jerry (spelled correctly) did not contact your employer in an effort to
>get you fired.

You contacted my employer, in an effort to get me disiplined, for what I wrote to Usenet. That is what you asked of them, and they laughed you off.

Its a crying shame someone would stoop to such lows, in an effort to attack someone, because they were "called out on the carpet", and made a fool of.

Just remember Gerry...it wasnt me who made you look a fool...you did that all by yourself.

>Jerry contacted your employer after you challenged him>to do so.

(yawn) More lies. YOU said "How would your employer feel about what you post?" And I said, "I dont care...I dont speak for them, and they dont censor me."

Then you contacted my employer...hardly an "invitation".

>Jerry felt some of your posts should have a disclaimer.

I didnt care what Gerry thinks then...I dont now...and neither does the University.

>Jerry's letter
>explained that and the fact he respected your right to>free speach but was concerned that what you were posting might seem to>have University sanction.

I told you before that I didnt speak for the university...and you STILL tried to get me fired...AFTER the fact.

>The reply asked me, as a Physician, to>explain to you your errors. Since I
>never represented myself as a>Physician (I am not) I assume I was not the
>only one to write to them.

Did your Mother ever tell you what you do when you "assume"? fact is, you were
the only one that wrote, and I still stand by my posts AS FACTS, and will post
then that way if I see fit.

>If I had wished to cause you harm at your job I could have done a much
>more effective job. Your entire library of 645 posts from the past year
>could have been forwarded to the head of the Utilities Department.

Your childish threats dont impress me Gerry (yawn). Would you like his address?
Hes a ham too.

>Including: the McDonalds FAQs, your nasty little exchanges on alt.
>homosexualty.politics or the Christmas hiding of Drew sorted by time
>posted,like during normal business hours. No Chris I never went after
>your job.

Boy Gerry...you REALLY need to get out more. Anybody who has so much hate,
that they would waste SO much of their time "researching" someone because
of what they post to Usenet, really needs to take a hard look at themself. I
have NEVER posted to a.h.p.

And I only post on my own time Gerry...nice try, and revert back to the
"assume" statement.

>With anyone else I would not spend the bandwidth to explain this to you
>publicly but since you keep misunderstanding my email then misquoting
>me perhaps this is best.

As opposed to your blatent lies?

>Since you seem to want to try me in the court
>of public opinion I'll let you apologize for the bandwith in the
>future.

Ok...I hereby apoligize to everyone for having to listen to Gerry's
hate-attacks, double talk, and lies.

>If you insist on blasting me in these
>newsgroups I reserve the>right to defend myself here.

You cast the first stone my friend.

>Hearing nothing I will
>not address this>subject further.

Fine, but when I see you pulling your double-talk, lies, and hate campaigns,
I reserve the right to comment as well.

>You commented in the past I never help anyone. Perhaps I can atone.
>Yes you can use the same 128kb chips for the KPC-3 and the KPC-9612

Rather childish Gerry...where were you when I was asking?

>I can get you a generic part number for them if you wish. I would not
>recommend the 512kb chips as they really load the lithium battery.

I have already installed my desired memory chip.

>I would also be willing to assist you getting on the FM bird and packet
>birds if you wish.

No offense Gerry, but the fact is, I would take your advice fixing my lawn
mower.

>I do both and have elmered a number of folks.

And you will forgive me if I say "I dont believe you".

Take care Gerry, and good luck.

Message-ID: <4vb1k1$h0k@globe.indirect.com>
Source record: 218646

08/19/96

THREE ARRESTS IN MESA INTERFERENCE CASE

Friday evening August 16th and Saturday morning August 17th Mesa police, with the help of the ARA Interference Committee, FCC agents and several Mesa hams, executed search warrants and arrested 3 individuals who were suspected of causing interference by transmitting on police and public service frequencies. These individuals are also believed responsible for malicious interference and 911 abuse on numerous local repeaters, which is what lead the interference committee to their locations.

Their electronic equipment, including radios, computers, and telephones has been seized and numerous felony and misdemeanor charges are pending. They may also be facing sanctions from the FCC.

Watch your newspapers and the next squelch tail for details.

I did not know that you still were required to have a license for
nav/com/RADAR on aircraft. When I left Beechcraft in 1982 anyone
who worked on transmitters had to have a license but the recent
magazines I read only talked about ocean going vessles and Satellite.
Now the only transmitters I repair are medical telemetry, you would
thing the FCC would include medical telemety under one of the services
that still require licenses. I guess that one slipped by them...

Jeeze Chris don't you recognize irony when you read it. I got a giggle
out of this post and I'm sure Jim did also. Perhaps even a few others
of the less humor impaired.

>
>I suppose thats why Gerry contacted my employer in an effort to get me
>fired over my posts to Usenet.

Chris,

Jerry (spelled correctly) did not contact your employer in an effort to
get you fired. Jerry contacted your employer after you challenged him
to do so. Jerry felt some of your posts should have a disclaimer.
Jerry's letter explained that and the fact he respected your right to
free speach but was concerned that what you were posting might seem to
have University sanction. The reply asked me, as a Physician, to
explain to you your errors. Since I never represented myself as a
Physician (I am not) I assume I was not the only one to write to them.

If I had wished to cause you harm at your job I could have done a much
more effective job. Your entire library of 645 posts from the past year
could have been forwarded to the head of the Utilities Department.
Including: the McDonalds FAQs, your nasty little exchanges on alt.
homosexualty.politics or the Christmas hiding of Drew sorted by time
posted,like during normal business hours. No Chris I never went after
your job.

With anyone else I would not spend the bandwidth to explain this to you
publicly but since you keep misunderstanding my email then misquoting
me perhaps this is best. Since you seem to want to try me in the court

of public opinion I'll let you apologize for the bandwith in the future. If you insist on blasting me in these newsgroups I reserve the right to defend myself here. Hearing nothing I will not address this subject further.

You commented in the past I never help anyone. Perhaps I can atone. Yes you can use the same 128kb chips for the KPC-3 and the KPC-9612 I can get you a generic part number for them if you wish. I would not recommend the 512kb chips as they really load the lithium battery. I would also be willing to assist you getting on the FM bird and packet birds if you wish. I do both and have elmered a number of folks.

73 Jerry

Be sure your power supply includes minimum load resistor. Some may not.
If not, under light loading the supply could fall out of regulation.
Before hooking to $$ equipment, check voltage at all expected loads.

I was on a mountain top in Maine. I recognized a house belonging to a 90 year old lady. I stopped by her house to chat. She pointed to a densely wooded hill and said, when she was a girl the hill was blueberry fields. What a concept...trees could actually grow naturally.

A friend went to Maine from the California desert. She was surprized to see that people cut trees to build houses. In the desest they plant trees when the build houses.

City people see pavement preventing trees, country people see trees preventing pavement. (reminds me of the three blind men and the elephant)

Why not plant a couple trees

Yellowstone recovered

The worst problem with them is a very subtle one that few people know about. When you take a lightning hit that raises or spikes your AC inbound supply lines and your supply lines go through one of these surge protector deals, you can have BIG time problems!

All switching power supplies that ride behind these surge suppressors with the MOV varistor avalanche devices have the potential to knee up the ground reference leg by about a 1 to 4 ratio of the input spike! Thus a 6000 volt spike that is clamped to ground by the surge protector box suddenly becomes a 1250 volt pulse on the ground system of the device that is tied to the switching power supply!

That is how network cards, serial I/O and parallel cards and so on, as well as the ground foil lines to the phone jack stuff through external modems gets blasted to bits on computers that are tied both to switching supplies as well as to these common MOV surge suppressed boxes.

Linear power supply devices are not commonly prone to this unique failure mode described above! It's nice to have that $25,000 insurance policy they sell you with each of these wonderful surge jobs. The problem is, that if you really do take a hit, it is almost CERTAIN with one that you WILL have to use the guarantee!

If you use a switching power supply for a ham power supply, you are asking for exactly the same kind of failure mode here. Worse, since you are usually not really well protected from an antenna standpoint, the use of switching power supplies for ham gear is a double disaster just waiting to blow your nice ham gear all to hades during even near misses.

I gave up using ordinary computers with switching supplies in ham gear or commercial radio installations a long time ago. I blew up virtually every computer that ever was involved in one during hits prior to that time. Since going to the Integrand Research industrial cases with the nice big old 40 pound pig iron linear supplies and isolation transformers, I have never (knock on wood), ever had a failure in the sites since.....

I would like to sell the following radio equipment:

I have a Yaesu FT890 with internal antenna tuner retail price 1600
USD... on
the used market they are bringing 900 to 1000 EASY

I have an Ameritron Al-80A 1 KW amp with full breakin built-in (no
relays,,,pin diode switching... you can send morse code and receive
between
the dits and dahs...it's slick!!) retail 1200 USD WITHOUT the full
breakin.... the pin diode board is around 300USD. Used it's worth
around 900
for a FAST sell WITHOUT full breakin

I have a MFJ DPS (digital signal processor) retail 250 USD....175 used
EASY

All I want is 1500 for all the stuff.....

> I nor anyone else need justify their reasons for modifying radios. But

True ... for now, anyway. If instances of amateurs causing harmful
keep occuring, you will loose that "right".

The simple lack of a motive for needing a modified radio is evidence
as to the intention to cause interference.

I bet a bunch of prosecutors and juries would agree.

Anyone who modifies a radio for out of band interference ... oops, I mean
"use", without cause to need that modification, is asking for the trouble
they get. (This includes the trouble that will occur if their modified
radio is stolen and used criminally and then traced back to the owner.)

(Hey, Bob! WA8IMO! Can I use your flameproof suit as if the above doesn't
ignite a bruhaha, I don't know what will!)

>Provide us with the study(ies).

There are a bunch of them. A summary of some relevent ones can be
found at the end of the NCRP Report No. 86 which is a major part of
the the basis for the standard the FCC has adopted. Dr. John Moulder
at the Medical College of Wisconsin maintains a number of FAQs on
non-ionizing radiation exposure. The FAQs have a large number of
references. Look over in sci.med for the FAQs.

>Statisticly speaking, statistics don't work. They are only as acurate
>as the intent and will of the statistitian.

Statistics can show us correlations. Correlation is not necessarily
causation, but it is sufficient to cause us to take a closer look
for a causative link, and if strong enough, sufficient for us to take
prophylatic measures even if we haven't discovered the exact causative
link. For example, if I drop a 2 kg hammer on your foot from a height
of 1 meter, it may or may not break a bone depending on how it lands,
how dense your bones are, etc. Now if I drop the hammer on your foot
1,000 times, statistics say a bone will likely be broken because it
will strike with an edge on a small bone sooner or later and concentrate
enough force to break it. Or, I can take the hammer and drop it once
on each of 1000 people's feet and get roughly the same correlation.
Some people will have smaller bones, some will have brittle bones
(osteoporosis), some will just be unlucky with the impact angle, etc.

Correlation isn't 1 to 1 with causation, but if it is significantly higher than the number of broken toes I see among a population who isn't at risk of having a hammer dropped on their foot, l'm likely to recomend a prophylactic measure like steel toed safety shoes for people likely to get a hammer dropped on their foot even though I can't predict the outcome of any particular drop.

Now if I substitute a 200 kg safe for the hammer, the correlation is going to be so strong that I believe even you might consider wearing steel toed shoes. (That would be equivalent to an RF exposure significantly larger than 10 mW/cm^2.)

>>The frequencies where (RF heating) exposures are most harmful to humans

>
>Couple? I suppose the good doctor had a flesh-dip meter? (GRIN) Did
>he find that the subjects exhibited lower SWR characteristics when
>loaded up for 30-300 Mhz operation vs. above/below?

Indeed, what is regulated is called SAR. SAR is similar in concept to REM for ionizing radiation. Different frequencies of ionizing radiation from soft X-rays to hard gamma have different effects on the body. While you might get the same number of RADs from a dental X-ray as you'd get from exposure to a cobalt 60 source, the REM (Rad Equivalent Man) exposure you'd get is very different. So it is also with SAR. Different frequencies are absorbed by the human body differently depending on a number of factors, including resonance effects, so in a sense the SWR *is* different when the body is excited at different frequencies.

The SAR for various frequencies is determined by calorimetry. The limit exposure is 4 W/kg of heat in the tissue. Experimenters (using corpses) subject the body to different frequencies of RF at a given surface power flux in mW/cm^2 and measure the energy deposited in the flesh for that power flux at that frequency. The result is the familiar chart seen in the ANSI and NCRP standards. Similar to a RAD to REM conversion chart, this chart shows the relative values of biological absorption for a given frequency and surface power flux.

Looked at in antenna terms, the human body is 1.5 to 2 meters tall, and serves as a resonant structure in that range. And when you look at the exposure chart, the frequency range between 30 and 300 MHz is, unsurprisingly, the one with the lowest permissible power density. Currently, SAR is measured only for whole body exposures, but there is some concern that various subparts of the body (notably the skull) form resonant structures at higher frequencies (such as cellular). By the time you get up into the microwave region, however, gross body structures are too large to be resonant, though there can still be localized hot spots in the body.

>"Well, we're not sure on this guy. Couldn't get the Gamma match to fit
>on his arm, and he complained about where we put the SO-239."
>

>operate on the bands they do and not on 10m and 2m? And you say the
>higher freqs are more subtle with regards to effect and heating? I
>don't think so.

Microwave ovens operate where there is ISM spectrum. There happens
to be an ISM band at 2.4 GHz, and magnetrons for that frequency
happen to be cheap to produce. Another ISM band (900 MHz) couples
more strongly to flesh, and is used in certain large commercial
RF ovens, but the circuits are more expensive to produce for a
given heating value, so consumer microwave ovens operate at 2.4 GHz.

There are other ISM bands too. One is 27 MHz. That is used for
plywood drying (hint: 8 foot sheets). Another is a spot frequency of
13.56 MHz (near 20 meters). An ideal frequency for heating flesh happens
to be near 1.4 GHz, the "waterhole" resonance, because the body is 70%
water, but that isn't an ISM band, so the oven manufacturers couldn't
use it.

>"Since the EPA regs were added, a lot of the guys who run QRO call a
>QSO 'OM-BBQ'"

Well, the EPA didn't set these regulations. The Telecommunications
Act of 1996 mandated the FCC to set these regulations based on the
best scientific evidence available, and that's the NCRP-86 and ANSI-92
standards.

>>The new MPE is 1 mW/cm^2 in the 30-300 MHz region. That gives at least
>>a 10x safety margin (actually, the margin is probably greater than
>>that since 10 mW/cm^2 is about the lower bound for noticable RF heating

>^^^^^^^^^^^^^^^^^^
>Always looking for a reason. All in the name of safety. Never any
>proof. Statistics are not proof, they are an indicator.
>You can get one set of stats from the media, and read something
>completely different from the MMWRs from the CDC!

>(Morbidity and Mortality Weekly Reports)

Yes, as noted above, correlation is not necessarily causation. But
as also noted above, it can be compelling reason to take prophylactic
measures. (That's particularly appropo for things like AIDS and HIV.
There is a very strong correlation between the presence of HIV in
the body and the development of AIDS. The exact mechanisms aren't
all known, and various co-factors may need to be present, but taking
prophylactic measures against HIV exposure is still a very prudent step.)
The same is true with low level RF exposures. There's no doubt whatsoever
that high level exposures to RF are harmful, immediately and drastically,
but there is also a strong enough correlation at low levels of exposure
for longer term effects to make it prudent to take prophylactic measures
by setting exposure limits.

>EXAMPLE:
>Like the 'assault weapons' crap. You hear how they are the preferred
>weapons of criminals, and used in the majority of deaths in the
>country. Then you read the Governments OWN statistics, you find out
>that 'assault weapons' contributed to about .8% of total gun violence
>in the US. (Firearm inflicted injury, 1995)

Indeed, but that proves nothing either. There are roughly 200 million
firearms in civilian hands in the US, less than 15,000 are used annually
for violent murder (or suicides). That's only 0.0075% of firearms. Most
of the ones used in crime are stolen.

The so called "assualt" weapons made up 8% of all firearms available
"off the rack" for sale prior to Comrade Clinton's ban. If gun type
choice were random, we'd expect roughly 8% of the weapons used in
violent crime would be "assualt" weapons. As you note, the number is
actually 10 times less than that. Does that mean criminals don't prefer
"assualt" weapons? Maybe, maybe not.

Criminals don't choose their weapons "off the rack" because they've
been forbidden to purchase weapons at retail since 1968. They get them
mainly by theft, and the most common firearm stolen is the Smith and
Wesson Model 10 (because there are millions of them out there in civilian
homes, and on police belts, the majority of police killings are with the
officer's own gun), so unsurprisingly, that's also the most common firearm
used in violent crime. But does that make it the weapon of *choice*?

Probably not. Given a *choice* criminals might prefer a submachinegun,
but they don't really have that choice because there are less than
150,000 of them in civilian hands, and they are generally well protected
against theft. So criminals have to settle for less than their preferred
choice and use what they can most easily get.

I happen to believe that criminals wouldn't make an "assault" weapon
their first choice anyway. They're no better than any other cosmetically
challenged semiauto rifle, and they are much harder to conceal than a pistol.
Since criminals generally have to be stealthy, big ungainly weapons aren't

very suitable. But the statistics don't prove that one way or the other.

>>but the mechanism isn't understood yet. Athermal effects have been
>>most noticed at lower frequencies, particularly when those frequencies
>>are pulsed at a low rate, IE in amateur radio that would correspond
>>to OOK Morse style signals. In vitro studies have shown changes at
>>the cellular level when exposed to fairly weak pulsed RF fields.
>
>Oh no! An excuse to get rid of CW? (GAG)

Actually, the evidence is pretty darn compelling. This is one of the
strongest associations between athermal RF and biological activity.
The range of 5-10 pps is also the range of brainwave activity, and
includes the 7.62 Hz resonance shown to have behavioral effects
in animals.

>>In particular, pulse rates in the 5-10 pps range have been shown
>>to cause abnormal chromosome division. This is usually taken as an
>>indication of a cancer causing agent at work.
>
>Maybe this is the secret to evolution? If we didn't have small changes
>in chromosomes, we probably would not exsist. And if we did, we would
>probably all look exactly alike. I wonder what measurements are made
>with respect to the amount of 'natural radioation' we receive on a
>daily basis? The effects of cosmic rays on human development?

Natural RF radiation exposure is truly minute. There is less than
300 kW-hr daily of naturally generated RF energy on a global basis.
(Mostly due to tropical lightning discharges.) Humans didn't evolve
in a high RF environment. It is only in the last 80 years that
humans have been exposed to any great extent to RF, electric, and
magnetic fields oscillating at ELF to SHF frequencies. That's not
nearly long enough to make an evolutionary adaptation.

Note, there was an error in the H field calc. See the follow up
for a correction. Realize too that this is merely a crude approximation
based on an isotropic source. You have to adjust it for the parameters
of your actual antenna. It can serve as a ballpark estimate, but no
more.

>
>Leonard...

The "hole" fills in every year as the polar vortex breaks
up and the stagnant air is diluted by fresh air from the mid
latitudes. This isn't new, or news. Certain conditions have to
exist for the ozone hole to form. The stratospheric temperature
has to drop below -60 C, the air mass must be stagnant, and
enough Cl or Br radicals have to be present to catalyze the
decomposition of ozone. That also happens once a year.

What has the "whackos" in a tizzy is that in the 1950s there
was no ozone hole that formed once each year, now there is.
As stratospheric Cl and Br radical concentrations have increased,
thanks mostly to CFC discharges, so has the size and duration of
the ozone hole.

Some of us may be tempted to say "so what" to this. The hole is confined to Antarctica and we don't live there (nor does anything else of much global importance). Some of the "whackos" (of the no sparrow, or spotted owl, shall fall variety) are agitated and alarmed. Perhaps we should ignore them. But there are also "whackos" of the "if this goes on" variety who we can't dismiss so lightly.

The global ozone level over the mid latitudes is thinning too. Because conditions aren't as extreme as in the polar vortex, there is no hole (and probably can't be a true hole) at the mid latitudes, but there is a measurable increase in shortwave UV getting through. *We* live in the mid latitudes. This should concern us, at least a bit.

On the flip side, low level ozone concentrations over our cities are increasing. This shields us from the UV leakage through the thinning upper atmosphere ozone layer. But the "whackos" want to *deplete* this ozone layer. They say it is bad for us to breathe. They're right too.

Perhaps there has been over-reaction (led by the "no spotted owl shall fall" crowd), but *some* reaction is prudent. Neither we nor the plants we depend upon have evolved to tolerate the higher levels of shortwave UV now getting through. A cautious step back from casual releases of Cl and Br radicals is warranted.

The dwell time for these radicals is on the order of 50 years, so there's no immediate way of knowing whether serious or trivial harm is being done until it is far too late to reverse the process. So it is wise to take prophylactic steps now in case the effects of increased UV in the mid latitudes causes large scale harmful effects.

COLORADO 14ER RADIO EVENT ANNOUNCEMENT

The 1996 Colorado 14er Radio Event will be held Sunday, August 25th. During the event, a group of amateur radio operators will operate portable from the summits of various Colorado 14000 foot mountains. The operating times will be from 9 AM to 12 Noon local time.

Radio amateurs are encouraged to work as many of the mountaintop stations as possible. However, this is NOT A CONTEST, no points are awarded, no scores recorded. A special event QSL card can be obtained by QSLing to the mountaintop station's home QTH (please include a Self-Addressed Stamped Envelope). Most mountaintop stations will be running low power handheld radios. To reduce QRM, PLEASE DO NOT USE HIGH POWER (more than 50 Watts) and do not call 14er stations unless you can hear them.

Radio operators with 14er hiking experience who wish to participate should contact Bob, KB0CY at (719) 488-0859 or bobw@col.hp.com. To avoid having multiple stations on the same peak, radio amateurs that want to participate must coordinate with KB0CY.

Frequencies used during the event:

146.43 MHz Longs Peak
146.46 San Juan Range (Handies, Redcloud, ...)
Sangre de Cristo Range (Crestone, Humboldt, ...)
146.49 Bierstadt, Grays and Torreys
146.55 Coordinating Frequency
(Net Control, Pikes Peak)
146.58 Mt. Evans
147.42 Elk Range and North Sawatch Range
147.45 Mosquito Range (Quandary, Lincoln, ...)
147.48 South Sawatch Range (Huron and peaks south)
147.51 Pikes Peak (QSOs)
147.54 Reserved for Mountaintop Stations Only

223.5 Primary 222 MHz frequency

446.000 Primary 70 cm frequency
446.025 Alternate 70 cm frequency
446.050 Alternate 70 cm frequency

52.525 Primary 6M FM frequency

Other bands/modes: standard calling frequencies

re-tune the transmitter to cause interference?

>world you've done this you're telling us you're able to justify breaking
>federal law, and that you're too cheap to buy a radio designed for such
>comms.

GAG! I don't believe I read that from you!

Jeff, radios are similar to guns in this respect. Just because I have
one does NOT mean I will comit a crime with it. It is the operator and
his intent for use of the device, not the device.

There have been times when I could not reach any amateurs on 2m or 440
when out on the road. But scanning the PS bands, I could hear all
kinds of activity. If I am in a life and death situation, I would
much rather risk losing my license than die, or watch someone die
because I'm afraid to go 'out of band'.

I nor anyone else need justify their reasons for modifying radios. But
should those modified radios be used in a destructive manner, they and
the operator should be dealt with accordingly. Take KC7QPJ for
example, here in Phoenix (Mesa). May he and his co-horts reap the
fruits of their labor, and others learn from it.

A teacher who believes that it is THREE times as bad to assault an
adult as it is to assault a child.

Someone who claims to despise amateur radio and its users but who can
not refrain from endless graffiti-like postings in their newsgroups.

Someone who replies to Burt Fisher :-(

1398. Opinions of TenTec 6-meter transverter

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-21 00:00:00 UTC
From: zommbee@nwlink.com
Message-ID: <4vfkth$4qn@texas.nwlink.com>
Source record: 218528
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

I recently put out a posting looking for 6 meter gear, and almost
everyone who replied said the TenTec transverter is the best
way to go for the money. It sure sounds like it. But I have
a few questions maybe some one can answer:

1. I use a TS820S. Is the transverter output plug-and-play with the
TenTec unit? or do I still need to run off the main SO239 and crank
the power down to 5 watts.

2. How is the performance, with say a 3 element yagi of the homebrew
variety?

3. How does the frequency read out? I assume I would shoot 10 meters in
and use some sort of table to convert 10m to 6m, using the 500khz
scale to keep track of the actual 1khz freq. Is this how it works?

4. How tricky is the kit to build and get going? I built converters
years ago (tube days) and they were quite simple. Is the TenTec
along those lines, or is it fussy?

5. I assume, by the name Transverter, that this is a receive converter
as well. Is this true?

6. What is your overall opinion?

I hope I haven't asked too much! I don't have alot to spend on gear and want
to make sure I spend it wisely. There's nothing better than the internet
for getting opinions (whether you want to or not!!), and I often base
buy decisions on what I hear in these groups.

>
> Best regards, Stan

The GMDSS license is required to maintain equipment. GMDSS is an acronym
for Global Maritime Distress & Ship safety. The maintenance of this
equipment requires the knowledge to maintain different communication
systems. More information can be found at:
http://www.navcen.uscg.mil/marcomms/gmdss/gmdss.htm
Its fascinating, check it out. It's not just for satellites anymore:)

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12 noon. Please note the change for the month of June.
Re-scheduled because of Field Day and Father's Day.

Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring RED (TOP) buzzer
for entry.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1996 Exam fee is $6.05, please bring exact change.
* Novice exams (elements 1A & 2) are free.

>to insure sufficient use of the bands in the future. If we don't use them
>we can lose them. Look at 220.

well, we didn't exactly lose 220...still have 222-225 MHz that's primary amateur
and some opportunities for some stuff at 219 MHz.

>I agree. However, if the old farts on the bands keep acting like immature
>cbers we may have a hard time defending our use if it ever comes under
>attack. I am often embarressed to show a visitor what is going on on HF.

somehow we got to gets the peer pressure going on the few idiots.

>I hope you are right, but I fear the ham radio hobby is deteriorating like
>many other aspects of our society.

but who says that we have to follow the same philosophy of decay? it's
just so trendy today to claim everything's deteriorating as an excuse to
be lazy and lay back and watch another video on MTV.

everything needs upkeep. what's probably wrong is that we had a break in the
flow of people into the service..this is resulting in folks that have been stuck
doing a job for a long time (say, the guys that are the "inner circle" of a radio
club..) not knowing how to deal with newcomers in a manner that will bring
them into the organization and groom them for their turn in the box...

Just a small thought, how about 1296 & above eme being done with
small 10' satelite tv dishes & relatively low power (200-300 watts)for a
signal off the moon. This would include the building of your own
tsansverter (not much commercial gear for the higher bands), using DSP
technology to help pull that weak CW signal out of the noise etc.

hahaha, my "crude" repeaters made from "any transceiver" as you indicate
are General Electric Mastr Series Base Station/Repeater commercial
equipment. They are high performance receivers with GaAsFET
pre-amps & continous duty transmitters all using pas/reject duplexers.

By the way you are an IDIOT because I do se my name & callsign
on my internet entries. IF you were really a ham you would know
that all you need is a callsign to get someone's address so you
don't need to list an address in every entry.

Sounds like you are bootlegging on ham radio.

1409. Re: Ten Tec, Advice

Newsgroup: rec.radio.amateur.misc

From: nick@cs.unc.edu
Message-ID: <4vfn9b$qkp@altair.cs.unc.edu>
Source record: 218539

I built one of the Ten-Tec 2m transceivers a few months ago and had a great time. Ten Tec has done a very good job in trying to create a kit that is fun and informative to build and that delivers good value.

The manual is very high quality and tries to teach you something about what you are building. To this end, the construction is in phases - at the end of each phase you should know something about the circuit you just assembled and you can test its operation pretty easily. For instance, the first phase is to assemble the front panel displays and switches and the control microprocessor. Hook up a power supply and you can enter frequencies, offsets, PLL tones, etc. to see it work. Next step is the freq synthesizer - if you have another receiver you can pick it up as you change frequencies via the front panel. Receive and Transmit stages are similarly staged.

I had a good time building the rig, got just the sort of transceiver I wanted at a reasonable price (and from a US manufacturer), and best of all had a great big grin on my face when I finished building something that worked. It reminded me a lot of the feelings I got many years ago building Knight-kits or Heath-kits.

Another happy customer,
Nick KD4CPL

Sounds reasonable but first ASK if a QSL is wanted or will be replied to. Otherwise this is still junk mail. I gave up sending out QSLs some years ago when I found I was spending more time writing them than having the actual QSOs. For this reason my QTH has been removed from the RSGB call book. Unfortuneately the DX Callbook continues to publish an incorrect mailing address for me in spite of several letters asking them to leave me out.

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site for hams to post their request for over-the-air schedules. Included in the posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted.

Visit http://www.sarrio.com and participate in your first cybersched.

Excellent, keep up the good work. Nice to hear you enjoy code. You'll soon see by the responses, however, that not everybody does.

It's part of the hobby, though. A bit like electronics, if you don't know the basics you won't get on the air.

IT'S ANOTHER WINDTRAX
AMATEUR RADIO BALLOON FLIGHT!

All are welcome to participate and join in the fun!
We expect this to be another successful ATV, Repeater,
and GPS/packet flight of approximately 2-3 hours duration,
and the pre-flight and post-flight nets will extend the fun.
Join us!

DATE: August 24, 1996
TIME: 1200-1300 UTC (0700-0800 Indiana time) Wx dependent
LAUNCH SITE: Purdue University Airport, Lafayette, IN.

Prelaunch Freq's: HF check-in @ 3.869-3.871MHz
2 meter locals 147.135/R (W9YB)
Nets will begin at 1130 UTC

Flight Package's:
Crossband repeater provided by W9DUU, Paul
2m rcvr to 6m & 70cm xmtrs, with voice ID
Using half-wave antennas and 100mW.

GPS/Packet system provided by WB9QPG, Dave
Garmin GPS rcvr, controlled by MIM packet & downlinked to 145.79MHz xmtr, lithum powered.
1/4 wave antenna, 100mW output.

ATV package by KT9V, Terry
Contains two B&W CCD camera's & a WB8ELK color
video graphics card. Downlinked on Wyman ATV xmtr via 1/4 wave antenna. Lithum powered, the
cameras are aimed horz. and vert, with controlled switching.

Flight Freq's:
Crossband Repeater Dwn 52.525 & 444.85MHz
(50mW & 100mW) Up 144.3MHz
GPS/Packet: Dwn 145.79MHz @ 1200 Baud,(VP) 100mW out
ATV: Dwn 439.25MHz (VP) 1.5 watts output

Balloon Type: Kaymont 1200 Gr.
Parachute: Custom made by KB9BSV, Barb, is 5' in diameter

We welcome your email notes regarding your reception!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 AUGUST AND FORECAST FOR 22 AUGUST - 24 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 20 Aug
Daily Proton Fluence >1 MeV: 7.7E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.9E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Aug 23 Aug 24 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Aug: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 20 Aug
Learmonth 7 2322 3111
Fredericksburg 5 8
Planetary 5 7

Observed Kp for 20 Aug: 2332 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
22 Aug 5 Quiet
23 Aug 5 Quiet
24 Aug 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
21 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
22 Aug Normal Normal Normal
23 Aug Normal Normal Normal
24 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
21 Aug 5

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
22 Aug 5 near predicted monthly values
23 Aug 5 near predicted monthly values
24 Aug 5 near predicted monthly values

1417. Radio/Ham Equip & WTB: 900 Tk HT, Johnson Mobile, Yaesu FT40

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-21 00:00:00 UTC
From: eplatt@wco.com
Message-ID: <321b1e33.2271498@news.wco.com>
Source record: 218547
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Must Sell ASAP: (No reasonable offer refused):
(3) Uniden FPS910TS 900 trunked HT. 9 System, 9 group 'brick' radio (rather large, a tiny bit more than the BC1/200 HT). Comes with 2 brand new batteries, 2 older batteries, 3 rapid chargers (not available anymore, hard to come by!!!) and 1 vinyl holster (no belt loop, just more for shipping/travel. $200/ each, or $475 for all 2. Invested much more into it. 2 currently programmed for TAC use.

(1) Johnson 9 channel 40?? (maybe 60) watt mobile. VHF. Was from Florida Sherriff or police which went to 800. Programmable by computer from Johnson Dealer. Must use external speaker (I can dig one out, standard 3.5mm plug), hand mike, and power cord included. GREAT radio. Scans, PL, everything. $250/bo.

(1)Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels PL _AND_ DPL, Keypad programmable, dual VFO, Dual watch, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (I Can't find this in the manual, I think it;s a hidden trick.) (PLEASE don't ask how to do it, I was overrun by more questions on how to do it than offers to buy..)Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $280/BO.

WTB: Icom U-16, must be in good condition. Make offer, or trade for one of the above??

WTB: Yaesu VX-10 UHF.. Make offer, trade for ALL of the above?

All prices plus shipping + COD. I am NOT a company, just a collector of stuff I no longer need. <GRIN>

ALL PRICES NEGOT.! I need to sell, so give me an offer!

eplatt@wco.com, or call me anytime at 415-939-1037.

>
> Bill, KB7MRF

The GROL is the license to operate/repair HF/VHF/UHF equipment on ships and aircraft. The GMDSS license (not endorsement as I stated previously) has 2 types: one for operator and one for maintainer; they are separate licenses. The books I studied for GROL said that GMDSS was a satellite-based system as I recall. Of course, satellite equipment still needs receivers, transmitters, and antennas. Satellites are also capable of communicating using voice and data. I don't know the details of the GMDSS systems however; I only took the GROL tests, Elements 1 and 3.

More information about *all* commercial licenses can be found at:
http://www.fcc.gov/wtb/colems.html

>and what do you think?

My first (and current) HF rig was an Icom 735, with which I have been very satisfied. However, I spent some time playing with the TS870S at the local HRO, and was extremely impressed. Once you get the hang of the various DSP methods, they can make the difference between barely copyable and armchair copy -- and presumably between copyable and not copyable at all. (I haven't tried the new Icom or Yaesu HF rigs, so don't know how they compare.)

Personally, I will probably wait a year or two to see whether there are any problems with the TS870S, and give them a chance to fix any that might appear, but if I had to get a radio now, I would probably be leaning very strongly the same way that you are. (Also, when I looked, the price was considerably better than on the Icom or Yaesu DSP rigs.)

>on a car.

Gary -- Is there a published source for these FCC findings? Do you know what power levels were being used with these types of antennas which caused the limits to be exceeded, and the type of emission? I'm particularly interested since my antennas include (and ONLY include) -- you guessed it, the exact ones you mentioned.

What puzzles me about the categorical exemption for under 50 watts is that it applies regardless of frequency, and regardless of emission type. If it is essentially impossible for 49 watts to exceed the limits, even at the frequencies for which the limits are the most stringent, and even for an emission type with a high duty cycle, then it seems to me that power considerably higher than 50 watts would be equally to exceed the limits on 75 meter SSB, for example -- which is where higher power is most important.

Am I missing something, or is the single limit for the categorical exemption as nonsensical as it seems?

Dave-

I was in your same position recently! Go to www.arrl.org/ and
start digging down for all the freq allocations. Sorry, I don't
have the exact page bookmarked.

I bitched about this lack of visibility to the webmaster pointing
out that it should be featured on the home page. He did respond
pointing me to the exact page. Nothing otherwise has changed, however.
Tip: it's like something under "field operations".

Good luck, 73

> Lee, KE3FB

Prior to about 1900, humans were exposed to very little RF or magnetic
or electric fields in the 3-30 MHz range. The primary natural source
of energy in that range comes from lightning. The total global lightning
energy is about 300 kW-hr per day, most of it below 2 MHz. That represents
a power density calculated by the NCRP guidelines several million times
less than the power density limits the new FCC regulations require us to
meet. Of course if you're right under a thunderstorm, you could get a

higher exposure, but when you time average as the guidelines require,
you're still way below the standard. Almost all of the RF exposure
humans have gotten has been from manmade sources.

You touched on the issue without even realizing it. We don't know much. But we can't go living our lives as if everthing is going to kill us. I'm all in favor of further study, but please, no more stupid epidemiological studies. They can't and don't shed much light on the issue because electromagnetic radiation is so pervasive. We need controlled lab studies which show cause and effect. Once these studies have quantified the risk, then we can take action.

The concept of "prudent avoidance" is not applicable unless we can at least determine the correct magnitude of the hazard. No-one has done that. Studies show all sorts of conclusions from relative risks of 2 (twice as likely) to relative risks of 0.8 (meaning that you're actually safer with the RF than without it). The effects of RF may be quite secondary. Also these effects are extremely weak. A relative risk of twice a very small probablitiy is still a very small probability. That is the most anyone can show.

"Prudent avoidance" is not appropriate when you aren't even sure that it is the RF, and not some secondary effect, which is causing problems.

One might as well advise everyone not to eat banannas because you notice that when people do eat banannas, other people slip and fall almost twice as much as when you don't eat bannans (they slip on the peels some slob dropped, a secondary effect).

I think many contributors to this thread ought to go take a class in risk quantification. Scientific American did an article about that a couple years ago. It is amazing how warped most people's perception (even mine) of risk can get...

Howdy Dave. The info you are looking for is at URL:

http://www.arrl.org/field/regulations/allocate.html#17

The WARC Bands are 30M, 17M and 12M -- opened up in the early 80's as I
recall.

You might try for an MFJ 300W Dummy load runs abt $29 new.
A little over your $ range. May do better at the discounters at
some of the 800 numbers in the mags.

> 73 de KN0Z Gary

The problem with that one Gary is that I still got lots of people calling me who did not want to talk to me. With a slightly rare prefix I had to resort to a drastic solution to eliminate both the junk mail and the QRM. It is now less of a problem since we got 12 and 17 metres as these bands seem to have less attraction for those who go for short rubber-stamp QSOs. I now very rarely use 20 metres.

We all have different ideas of what the hobby should be about. While I do not want to spoil other peoples fun, I do not want them to spoil mine. I used to get too many card chasers interrupting interesting QSOs. I now enjoy being able to experiment and communicate. I have spoken to some people who have abandonned HF for 2 metre FM just to avoid the deluge of cards.

If my ideal version of Amateur Radio was adopted we would have no QSLs, certificates or contests and not be allowed to use commercially made equipment. Now that would reduce the QRM!

The Raymond Sarrio Company's Ham Radio WWW site has a very large data base of ham radio classified ads. ALL LESS THAN 30 DAYS OLD! at:

http://www.sarrio.com.

This new classified section allows Hams to search for equipement with the help of our new and unique search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

Unfortunately, given that yours is a relatively new license, you probably only have elements 1a (5 wpm), 2 (novice theory), and 3a (technician theory) to your credit. This means that you must pass elements 1b (13 wpm) and 3b (general theory) to upgrade to a general class license. If you passed the old element 3 which was the technician/general theory test then you indeed need only pass 1b to upgrade.

Source record: 218373

Another reminder!! THIS SUNDAY!
Times are approximate: 9:30AM til 5:30PM PDT

Look for and work us!!

The Sonoma County Radio Amateurs will be conducting a mini-DXpedition to Alcatraz Island in the San Francisco Bay on August 25th. It will be a one day event and we plan on working 40/20/15 meters SSB and/or CW and 2 meters FM and SSB and/or CW and possibly 70 cm. SSB and/or CW.

The club callsing of W6LFJ will be used. Actual frequencies we are planning to run are (+/-):

40m 7.120 MHz CW
20m 14.075 MHz CW
15m 21.140 MHz CW
6m (?) CW(?)
2m Std. call CW
70cm Std. call CW

40m 7.265 MHz SSB
20m 14.270 MHz SSB
15m 21.400 MHz SSB
6m (?) SSB(?)
2m Std. call SSB
70cm Std. call SSB
2m 146.520 MHz FM Simplex

We will be offering a special QSL commemorating the event. We want to contact YOU! Spread the word!

To find out more you can contact Larry Gustafson, KD6VUM at kd6vum@sonic.net or you can head your browser to:

http://cds1.net/scra/

and click on the Mini-DXpedition announcement.

73,
Ken

I am wanting to build some dual band 2mtr/440mhz antennas by using 450 ohm ladder line and possibly in a j-pole configuration. i would like to enclose these antennas in either 3/4 inch or 1 inch pvc pipe to make them rigid and to weather proof them. i could put a cap on the top and would like to mount a so-239 in the base so a coax could be connected. does anyone have any plans or information on the dimentions , gain, swr, etc that could be achieved. also looking for any other ideas even if not with the ladder line as long as it would mount in the pvc pipe. please email me at tcmedlin@cris.com

thanks, tom WA5KUB

>
>Am I missing something, or is the single limit for the categorical
>exemption as nonsensical as it seems?

The exemption is not because it is categorically safe. The exemption
is political, a result of ARRL lobbying. It was judged too burdensome
on amateurs to make them do the required study on their low power mobile
and handheld radios. Some of them will certainly exceed the exposure
standard, perhaps by substantial margins (especially mobiles using
on-glass antennas). The FCC justified the exemption based on the
assumption that their use would be very low duty cycle, and any
exposure would be very transient to any member of the general public.

This assumption may not be warranted in many cases. A 45 watt mobile
using an on-glass antenna can grossly violate the exposure standard
for occupants of the vehicle. If there are children in the vehicle

too young to give informed consent, I'd say that was reckless. OTOH
the FCC study showed that thru-hole roof mounted VHF antennas had
exposures to the occupants of the vehicle well below the standard,
so that's suitable for a categorical exemption.

HTs are more problematic. Whole body exposure for HTs under 7 watts
is generally within the standard. But exposure to particular parts
of the body, something not well addressed in the new FCC rules, could
still exceed the standard by a large margin, especially exposures to
the eyes. The lens of the eye is particularly vulnerable to RF heating
because there are no blood vessels in it to rapidly carry away excess
heat.

I'm concerned by that. I'd suggest that amateurs do the study on
all their radio setups, not just the ones running 50 watts and
more, and treat any found out of compliance with a good bit of
caution.

The Milham study used public records, lists of silent keys from
QST and public death certificate information filed with the coroner
of each jurisdiction in Washington State where the amateurs died.
(The study was only of deceased amateurs in Washington State.)
The control group was taken from the general morbidity information
from Washington State for the same time period.

The study does have several serious flaws. No adjustments were
made for other factors than being an amateur radio operator, and
no actual on-site field strength readings were made at any of the
deceased amateurs' stations, or at the homes of any of the control
group members (also deceased during the same interval). The assumption
was implicitly made that amateurs are generally like other members of
their communities in lifestyle factors (other than their amateur radio

activities). That may or may not be true.

It is possible to postulate that persons particularly at risk for certain cancers are also particularly drawn to amateur radio. Factors such as personality type have been implicated in other studies as co-factors increasing certain cancer mortality risks. It could be, in other words, that people drawn to ham radio just don't take as good care of themselves as the general population. (I don't know of any studies on this, but it is my personal observation that few amateurs appear to be very health conscious.)

Paradoxically, however, amateurs were generally older at time of death than the age of the general population of Washington State at time of death. So while more may die of certain cancers, it *appears* that they do so at a more advanced age. That could be a mere statisical anomaly due to the fact that amateurs are on average older than the general population anyway (the demographic fact that some of us have been pointing to with alarm for some time now, IE the greying of amateur radio, may play an unrelated role here). The general population has deaths included of people of a much younger age than there are amateurs, IE infant and child mortality is included in Milham's general population, but no infants and few children are likely to be amateurs. This could skew the age curves to make it *appear* that amateurs die at a more advanced age.

But Milham isn't the only study of the risks of RF exposure. It is merely the one best known for focusing exclusively on amateur radio as a risk factor. Other more controlled studies have been done on workers exposed to EM fields. The IBEW paid for one such study. There have also been a number of in vitro studies of the effects of RF on living cells. Those too have shown suggestive changes that would be taken, if the causative agent were a new chemical or drug being tested, to be indications of carcenogenic activity.

Note that this issue is separate from the thermal effects of RF. That's well understood to be a risk. The new FCC exposure rules are designed primarily to address that hazard. The issue of EM fields inducing or promoting cancer is not solidly enough established to form the basis for exposure standards yet, so that was not addressed in the FCC proceeding.

Some other countries have been convinced to set considerably stricter exposure standards than the US has been using, based on cancer risk studies. Notably the ex-Soviet Union had for years an exposure standard 10x stricter than the one we have been using, IE ANSI-82. Some other European nations have imposed stricter limits than NCRP-86. I don't think we are over-reacting. The new standard is still pretty lax compared to those in some other countries. We may be erring on the side of caution, but if we must err, that's the side to be on.

>world is a very different place!
>
>Can some one please give me the basic rundown of the WARC
>bands, and what the allocations are? I have a general
>class license. What segments/modes are in my license class?

Ok, the so-called WARC bands are open to General Class and
above. Here's the mode breakdown.

30m 10.1-10.15 MHz RTTY/data

Note, the 30m band is shared with the international fixed radio
service and amateurs are not permitted to interfere with fixed
service stations.

17m 18.068-18.110 MHz RTTY/data
17m 18.110-18.168 MHz Phone/image

12m 24.89-24.93 MHz RTTY/data
12m 24.93-24.99 MHz Phone/image

There are *no* CW (IE OOK Morse) subbands on HF (only on 50.0-50.1 MHz
and 144.0-144.1 MHz). CW is permitted anywhere on any amateur band, of
course, but is predominantly found in the RTTY/data band segments by
custom. Amateurs of other nations don't necessarily follow US bandplans.

An interesting discussion!

When I first heard of the Milham (?) study, I was told that the figures for hams were based on selecting names that appeared in "Silent Keys" in QST and that the "general public" is what the smaller group was compared with. A question I had at the time that has not been answered is if a similarly sized subgroup was selected based on some other criteria was examined to see if the same kind of statistical variations would appear. Apparently, while hams appeared to be slightly more likely to die of some kinds of cancer, they were also slightly less likely to die from other cancers.

It is my understanding that the database on which the study was based is not publicly available. If this is so, the study is seriously flawed in that there is no way I or most anyone else can tell if the conclusions extracted are in fact supported by the data. Given that the observations on which the conclusions were based are unavailable, the conclusions can have no scientific validity. Note that I am not saying that the conclusions are wrong. I am saying that niether I nor anyone I know is able to repeat the observations and independently confirm or refute the conclusions.

Put simply (and crudely), Joe McCarthy had a list of "bodies" too.
How many of HIS claims were true?

Super Morse is a good program. it has been around for years and has quite a few different versions.

1463. GB2RS News 25th August 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-22 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <840730103snx@llondel.demon.co.uk>
Source record: 218479
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 25th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

There is a new RSGB QSL Bureau sub-manager for the G0I series of callsigns. He is Anthony Lord, G4KHT, whose address is correct in the RSGB Call Book. Anthony takes over the position from Mr I Webb, G4JFF, who is thanked for his services as sub-manager for this series in the past.

This weekend, the 24th and 25th of August, is the Historic Scotland Weekend, and ten special event stations are on the air from historic sites around Scotland. Each station is active until 1700UTC Sunday, mainly on 20, 40 and 80 metres SSB. Details of the callsigns and location of the stations can be found on page 94 of the August RadCom, but please note that unfortunately GB2HSA will not be active. An award is available for contacting these stations: for full details, contact Mike Dalrymple, GM4SUC, whose address is correct in the Call Book, or phone him on 01292 443127.

Listeners to the 2 metre GB2RS news broadcast at 9.30am local time in Cornwall should note that from the 1st of September it will be made through the north Cornwall repeater on channel R5, and not on S21. This will be for a trial period of four months. Reports will be welcomed either by the newsreader or direct to GB2RS manager Ian Kyle, GI8AYZ, whose address is correct in the RSGB Call Book. The purpose of the experiment is to improve coverage in this difficult terrain.

Jamboree On The Air takes place this year over the weekend of the 19th and 20th of October. All those applying for a GB special event callsign for Jamboree On The Air will receive a free 'JOTA Pack' containing lists of participating stations and countries permitting third-party greetings messages, plus a newsletter from the Scouts Association. Groups intending to operate during Jamboree on the Air using club station callsigns with prefixes such as GX or GS should inform Eva Telenius-Lowe at RSGB headquarters by the 4th of October if they also wish to receive a free JOTA Pack.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Corsica, F2YT is active as TK/F2YT from now until Monday the 2nd of September. He will also try to operate from some of the coastal islands off Corsica.

From Crete, IV7VEH is active as SV9/IV7VEH from now until Thursday the 29th of August on SSB only.

And from the Aland islands, OH2KMG will be active as OH0KMG from Friday the 30th of August for three days, on CW and SSB.

Now news of some special event stations:

GB2LAM is operational from Ludham Air Traffic Control War Museum this weekend, the 24th, 25th and 26th of August. The station is operational on 2, 20, 40 and 80 metres using FM, CW and SSB.

And GB4DAR is being operated by the Derwentside Amateur Radio Club at Allensfords Show today and tomorrow, the 25th and 26th. The station is on the air between 10 and 1700 UTC, mainly on 40 and 80 metres.

Next the Rally News:

The Torbay Amateur Radio Society rally is held at the Torbay Leisure Centre, Clennon Valley, in Paignton, today, Sunday the 25th of August. Doors open at 10.00am.

The Galashiels and District Amateur Radio Society's open day and rally also takes place today, the 25th, at the Volunteer Hall, St John's Street, Galashiels from 11.00am.

The Coleraine and District Amateur Radio Society's radio rally is being held at the Lodge Hotel in Coleraine on the 25th. Doors open at 12.00 noon.

Huntingdonshire Amateur Radio Society are holding their annual August Bank Holiday Monday rally on the 26th of August at The Ernulf Community School, St Neots, Cambridgeshire. The event features a car boot sale and a large hall with traders. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For further details contact David Leech, G7DIU, on 01480 431333.

And Swansea Amateur Radio Society are also holding an amateur radio and computer show on Monday the 26th of August in Singleton Park, Swansea, as part of the Swansea City and Council Summer Show. Doors open at 11.00am and for further details you can contact Roger, GW4HSH, on 01792 404422.

The Milton Keynes and District Amateur Radio Society Radio Fayre takes place next Sunday the 1st of September, in Bletchley Park. There will be a bring and buy stall, a club antenna erecting challenge, Morse tests, demonstrations by service organisations, and arena events for the family, including live music. Talk-in will be on 2 metres channel S22 and for further details please ring 01908 672920.

The Bristol Radio Rally and Computers and Electronics Market will be held at the Brunel Centre, Temple Meads Station, Bristol on Sunday the 1st of September. For further details ring 01275 834282.

Next Sunday, the 1st of September, the Telford Radio Rally will take place at the Telford International Centre. The event features dealers, a flea market, bring and buy stand, Morse tests on demand, and an RSGB book stall and membership information stand. For further details please ring 01743 235619.

Now for the contest news:

The Worked All Britain 144MHz QRO Phone contest will be on Sunday the 15th of September and not on the 8th of September as previously advertised. Full details are available from the WAB Contest Manager, Graham Ridgeway, G8UYD, whose address is not correct in the 1996 Call Book. Graham's address is 6 Rosewood Avenue, Blackburn, Lancashire, BB1 9SZ.

The fourth of six sessions in the RSGB 10GHz Cumulative Contest takes place today, Sunday the 25th of August, between 0900 and 2100UTC. The rules were published in the March 1996 RadCom.

And now the solar factual data for the period from the 12th to the 18th of August, compiled by Neil Clarke, G0CAS:

Solar flux levels declined slightly and averaged 69 units. The 90-day solar flux average on the 18th was 70 units. X-Ray flux levels also declined and averaged A1.5 units. Geomagnetic activity started the period at 'quiet' with an Ap index of 5, but during the second half of the week increased to 'unsettled', with an average of Ap 9 units.

Now the ionospheric data for Central France for the period from the 9th to the 15th of August. The average F2 daytime critical frequencies declined to 5.7MHz on the 11th and 12th, then increased to 7.2MHz on the 14th and 15th and the average was 6.4MHz. The darkness-hour lows averaged 3.1MHz. The daytime highs took place between 1900 and 2100 hours every day and the darkness-hour lows were between 0200 and 0400. 15 hours of blanketing E was recorded by Meudon.

And lastly the solar forecast. This week the more active side of the sun is expected to be looking our way and solar activity could increase from very low levels if any solar flare activity takes place. Solar flux levels are expected to increase to the high 70s or even the low 80s. Geomagnetic activity is expected to be 'quiet' for most of the week, but levels could increase around midweek. MUFs during daylight hours at equal latitudes are expected to be about 19MHz for the south and 16 MHz for the north. However, these levels could be slightly higher, especially down to South Africa and South America, and particularly during the evening. The darkness hour lows are expected to be about 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Kilo and M1 Alfa Yankee series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Golf series.

I've talked to some folks that indicates that an FCC license
is no longer required by the FCC. That can still be true while
the FAA maintains its own criteria. That's no differeb than
a private company requiring some type of license to work
on their mobile radios even if the FCC doesn't mandate it.

As to the specifics below, perhaps someone can verify
the current applicability of the rules cited.

Anyone have the pinout specs for a DB9 connector to 1/8" stereo plug
to make a cable to connect the FT51R to computer? (like the ADMS cable)
Also need the same for the cable to the FT50. (they are different)

Bob

Not sure I've followed the main idea of this thread or not.

Is the problem that hams participating in exchanging QSL cards are
not following through or that unsolicited QSL cards are unclaimed at
a QSL bureau?

If the first, then _maybe_ there's a problem with manners. If the second,
then the potential recipients don't seem to be at fault to me.

I've been licensed since '88 and haven't participated in exchanging QSL
cards. Not through any particular thing other than I was never interested
in doing so. Didn't buy any cards, didn't ask for any. Don't recall that
getting a ham license required me to exchange QSL cards, either.

If the subject comes up at all during a QSO (and it doesn't very often), I
just tell the other ham I don't have any cards and don't trade 'em. Since
we are usually rag chewing and clearly aren't hunting paper it's never
been a problem.

Speaking of paper hunting, all it took to COMPLETELY turn me off to
that concept was a WAS net.

I don't know how to use a QSL bureau and could care less how to. If
QSL cards to me are gathering mold in one, then they are unsolicited
and hardly my problem. I have received maybe a dozen QSL cards direct
and have always acknowledged by letter, but I still don't intend to buy
cards I don't want just to respond to cards I didn't ask for but received
anyway.

I also doubt that a QSL card from me would make any realistic difference
on the other end. North Carolina is not rare dx :-)

If others want to chase paper certificates or exchange QSL cards, I'm all for it. Ham radio has room for all kinds of activities. But seems to be an unfortunate tendency in this hobby to berate those who don't share a particular view of what "should be" or participate in someone's favorite activity.

Message-ID: <4vi15j$bd6@dfw-ixnews8.ix.netcom.com>
Source record: 218488

From National Radio Examiners Commercial Radio Examiner's Manual rev jul 96.

The General Radiotelephone Operator License (GROL) is required to adjust, maintain or internally repair transmitters in aviation, maritime and international fixed public radio services. It is also required by most AM/FM/TV brodcast licensees. In addition to all of the operating authority of the MROL, it also permits operation of maritime land or ship radio stations operating with more than 1,500 watts PEP and voluntarily equipped ship or aeronautical stations with more than 1000 watts PEP.

1473. Bootleg ELNEC being sold

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-22 00:00:00 UTC
From: w7el@teleport.com
Message-ID: <4vgqos$304@nadine.teleport.com>
Source record: 218489
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I just received a call from someone who purchased a copy of ELNEC (antenna analysis program) at the Jacksonville, FL hamfest a few weeks ago. According to his report, the seller had several copies, and he recalled paying about $22 for it. ELNEC, EZNEC, and EZNEC-M are commercial, copyrighted software. They are not shareware or freeware. I sell only direct; I have no representatives or distributors.

If anyone can identify the individual selling these programs, please contact me right away at w7el@teleport.com. If you see any of these programs being sold anywhere, by anyone, please identify the individual and company if you can, and contact me. I've spent well over 1,000 hours developing these programs and will take legal action against anyone selling them. Anyone attending the forthcoming Melbourne hamfest would do me a great favor by keeping an eye out for this person.

The only ways to get a legal copy are:

- purchase it from me, or

- purchase it from a person who is a registered owner and is giving up his license to you. That is, the seller can not use the program after he sells it. Upgrading at a discount price doesn't confer a second license. That is, a person can't sell or give away his old ELNEC when upgrading to EZNEC, or an older version when upgrading to a newer one, unless he pays full price for both the original and upgrade.

There is a demo version of ELNEC, which is clearly identified on the screen and in the manual as a demo version. ELNEC is started by typing 'ELNEC'. The demo version requires a different word to start. The demo version _only_ can be freely distributed and copied. (It's available from ftp.teleport.com/pub/vendors/w7el and other sources as ELNECDEM.EXE. "Running" it expands it into several files, including a READ.ME file which, again, identifies it as a demo version.) There are no demo versions of EZNEC or EZNEC-M.

If piracy is condoned and allowed to persist, nobody is going to make the very substantial effort of developing quality software. So your help will also make it possible to keep quality software available.

Thanks for your help!

73,
Roy Lewallen, W7EL

Sure, if we all keep bending over for crap like this EPA stuff..

>The simple lack of a motive for needing a modified radio is evidence
>as to the intention to cause interference.

Not really, it proves that the prosecution has lack of evidence.

"He owns a gun, he must be bad. Why, he'll probably be shooting
someone soon.." Yeah, right.

>I bet a bunch of prosecutors and juries would agree.

>Anyone who modifies a radio for out of band interference ... oops, I mean
>"use", without cause to need that modification, is asking for the trouble
>they get. (This includes the trouble that will occur if their modified
>radio is stolen and used criminally and then traced back to the owner.)

If a situation came up where you had an accident in the middle of
nowhere, people are bleeding and strewn about the road.. You call for
help on all the simplex freqs, even try a couple repeater pairs to no
avail.. You tune out of band to hear a DPS officer, BUT, since you
didn't have a modified radio, you sit and watch the others die,
knowing.

God help us if we ever need to, but its worth the risk to save a life.

I feel like I just woke up out of a 12 year sleep and the
world is a very different place!

Can some one please give me the basic rundown of the WARC
bands, and what the allocations are? I have a general
class license. What segments/modes are in my license class?

I know there are probably a ton of ARRL publications on this,
but I haven't seen them and I'm getting really curious. Using
my Kenwood R1000 GC receiver I have monitored 10.1-ish and
heard what must undoubtedly be the 30-meter CW band, but where
does it stop?

I went to the FCC frequency allocation site on the web and
got virtually no understandable information from it.

Any information would be greatly appreciated.

My layperson's understanding of this is that even if we were to be required to file such documents under NEPA (or CEQA in California), they very strongly frown on duplicative efforts. In many cases, existing studies of essentially the same problem can often be included by reference. So, for example, if W1AW were required to do an EIR and the ARRL was sufficiently dilligent in preparing its report, then those of us whose situations were sufficiently similar (or obviously less severe) could utilize their work, and would likely require very minor individual effort. (Of course, this should be considered as the speculation of an untrained concerned citizen and appropriate counsel should be sought if the question at hand applies to you in more than a theoretical or rhetorical context).

Internet: http://www.fcc.gov

FCC PUBLIC NOTICE

Federal Communications Commission
1919 M St., N.W.
Washington, D.C. 20554

August 22, 1996

AMATEUR STATION VANITY CALL SIGN SYSTEM
FILING GATE 2 OPENS SEPTEMBER 23, 1996

Amateur operators who meet the following eligibility standards may request a vanity call sign on or after September 23,1996. File your request on FCC Form 610-V. Legibility is critical! If the information on your application is not legible, you could experience a delay in processing, lose the opportunity to obtain a requested call sign or even obtain a call sign different from what you want. You must hold an unexpired amateur operator/ primary station license grant of the proper operator class, as described below, to request a vanity call sign for your primary station. To request a vanity call sign for a club station, you must also hold an unexpired club station license grant listing you as the license trustee. Refer to the licensee data base to verify that the call sign you are requesting is not already assigned. A call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio, or death of the grantee. See Fact Sheet PR5000 Number 206-V AMATEUR STATION VANITY CALL SIGN SYSTEM. For explanations of Groups A, B, C and D and the geographic Regions, see Fact Sheet PR5000 Number 206-S, AMATEUR STATION SEQUENTIAL CALL SIGN SYSTEM.

NOTE: A separate Public Notice will be released providing guidelines for the implementation of electronic filing procedures for FCC Form 610-V.

REQUEST BY LIST (PRIMARY OR CLUB STATION) - Provide a list of up to 25 call signs in the order of your preference. The first assignable call sign on your list will be assigned to your station. When so requesting for your primary or club station:

* The call sign must have been unassigned for at least two years.

* If you are an Amateur Extra Class operator, each call sign must be in Group A, B, C or D.
NOTE: Advanced, General, Technician Plus, Technician, and Novice Class operators are not yet eligible to request by list. Advanced Class operators

will be eligible at Gate 3. Others will be eligible at Gate 4.

* Each call sign must be one designated for the Region of your mailing address as follows:

** One of the contiguous 48 states - Regions 1 to 10.
** Alaska - Regions 1 to 11.
** American Samoa - Regions 1 to 10, or Region 13 having numeral 8.
** Commonwealth of Northern Marianna Islands - Regions 1 to 10, or Region 13 having numeral 0.
** Guam - Regions 1 to 10, or Region 13 having numeral 2.
** Hawaii - Regions 1 to 10, or Region 13 having numeral 6 or 7.
** Puerto Rico - Regions 1 to 10, or Region 12 having numeral 3 or 4.
** Virgin Islands - Regions 1 to 10, or Region 12 having numeral 2.

REQUEST BY FORMER HOLDER (PRIMARY STATION) - Opened May 31, 1996.
For your primary station, you may request a call sign that was previously assigned to your primary, secondary, repeater, auxiliary link, control, or space station. When so requesting for your primary station:

* You may request your former call sign even though it has been unassigned for less than two years. The two year requirement does not apply to an otherwise eligible primary station if the call sign was previously assigned to a station of the requestor.

* You do not have to hold a class of operator license required for the Group (A, B, C, or D) for the call sign requested. A call sign request by former holder may be from any Group in the sequential system.

* Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested by former a holder may be in any Region.

REQUEST BY CLOSE RELATIVE OF FORMER HOLDER NOW DECEASED (PRIMARY STATION) - Opened May 31, 1996.
For your primary station, you may request a call sign that was previously assigned to the primary, secondary, repeater, auxiliary link, control, or space station of your now-deceased spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law. When so requesting for your primary station:

* You may request the former call sign of a close relative now deceased even though it has been unassigned for less than two years. Upon the death of the holder, a call sign is assignable immediately to an otherwise eligible primary station of a close relative.

* You must be an Amateur Extra Class operator to request a Group A call sign.

* You must be an Amateur Extra or Advanced Class operator to request a Group B call sign.

* You must be an Amateur Extra, Advanced, General, Technician Plus, or Technician Class operator to request a Group C call sign.

* You must be an Amateur Extra, Advanced, General, Technician Plus, Technician or Novice class operator to request a Group D call sign.

* Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested by a close relative of former holder now deceased may be in any Region.

* You must show your relationship to the deceased person exactly as listed in the instruction, i.e., child, niece or in-law.

* The license grant of the former holder now deceased must have been deleted from the licensee database. That is accomplished by a relative of the deceased submitting a signed request to have the license grant cancelled accompanied by a copy of an obituary or death certificate. The request for cancellation must be submitted to the FCC, 1270 Fairfield Road, Gettysburg, PA 173257245 prior to filing the application for a vanity call sign.

REQUEST BY FORMER HOLDER (CLUB STATION) - Opened May 31, 1996.
For the club station for which you are the license trustee, you may request a call sign that was previously assigned to that station. When so requesting for a club station:

* You may request your club station's former call sign even though it has been unassigned for less than two years. The two year requirement does not apply to an otherwise eligible club station if the call sign was previously assigned to the club station for which the requestor is the license trustee.

* You do not have to hold a class of operator license required for the Group (A, B, C, or D) for the call sign requested. A call sign request by former holder may be from any Group in the sequential system.

* Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested by a former holder may be in any Region.

REQUEST IN MEMORIAM (CLUB STATION) - Opened July 22, 1996.
If you are the license trustee for your club station, you may request in memoriam for your club station the call sign previously shown on the primary, secondary, repeater, auxiliary link, control, or space station license of a deceased person who was a member of the club. When so requesting in memoriam for your club station:

* The club must have held a club station license grant on March 24, 1995, or you must be an Amateur Extra Class operator.

* You may request the call sign even though it has been less than two years following death of the club member. Upon the death of the holder, the call sign is assignable immediately to an otherwise eligible club station.

* You must have in your station records a written statement (do not send to FCC unless requested) from a spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law of the deceased confirming the deceased person's association with the club and showing consent of the relative to your request.

* You must be an Amateur Extra Class operator to request a Group A call sign.

* You must be an Amateur Extra or Advanced Class operator to request a Group B call sign.

* You must be an Amateur Extra, Advanced, General, Technician Plus, or Technician Class operator to request a Group C or D call sign.

* Your mailing address does not have to be in the Region designated in the sequential system for the call sign requested. A call sign requested in memoriam may be in any Region.

* You must enter the relationship to the deceased person giving consent exactly as listed in the instruction, i.e., child, niece or inlaw.

* The license grant of the former holder now deceased must have been deleted from the licensee database. That is accomplished by a relative of the deceased submitting a signed request to have the license grant cancelled accompanied by a copy of an obituary or death certificate. The request for cancellation must be submitted to the FCC, 1270 Fairfield Road, Gettysburg, PA 17325-7245 prior to filing the application for a vanity call sign.

A $30.00 fee is required with your FCC Form 610-V application. Payment of fees may be made by check (payable to "FCC"), bank draft, money order or credit card. If paying by credit card, you must also complete and submit FCC Form 159 with your FCC Form 610V. Do not send cash.

Send your application package to:

Federal Communications Commission
Amateur Vanity Call Sign
Request P.O. Box 358924
Pittsburgh, PA 15251-5924

If you do not qualify under the forementioned eligibility standards, your application will be dismissed. A future public notice will announce Gate 3 which will have expanded eligibility standards.

For further information, contact the Consumer Assistance Branch at 1-800-322-1117.

This is indeed the flaw that the FCC never really faced up to when they wrote their silly new regulations on RF exposure. There is no easy way to model many of the antennas we hams use. And even if there were, that sort of thing is beyond the technical ability of at least 95% of all hams.

The test equipment the FCC made references to cost many thousands of dollars. I think it probably costs more than most hams have spent on their entire stations.

Anyhow, what we need is a simple reference. We can use a simple receiver, portable antenna, and an attenuator set to act as a relative FS meter. We can place exactly one watt in to a reference (NIST) dipole for VHF measurements and then back off in to the far field at some given distance for a known field strength. --But I still don't see how we can make a
usable FS reference scheme for anything below 50 MHz.

Radio shack sells 'em, and several of the mail-order catalogs (Sharper Image, Damark, for starters) also deal in these things... and they go for prices so low that you can't hope to build something workable for anything close, in my opinion. I found a set of Radio Shack FM transceivers at a flea market in Chicago for $20- they're just what you describe. But pay attention to the headset, too- for motorcycle use, you might need noise-canceling mikes.

This is indeed the flaw that the FCC never faced up to when they wrote their silly new regulations on RF exposure. There is no easy way to model many of the antennas we hams use. And even if there were, that sort of thing is beyond the technical ability of at least 95% of all hams.

The test equipment the FCC made references to cost many thousands of dollars. I think it probably costs more than most hams have spent on their entire stations.

Anyhow, what we need is a simple absolute reference. We can use a portable receiver, antenna, and an attenuator set to act as a relative FS meter. For VHF and up we can calibrate it by putting exactly one watt in to a reference (NIST) dipole for VHF measurements and then back off to the far field at some given distance for a relatively accurate field strength.

Below VHF, I don't know how we can make a usable FS reference scheme for anything below 50 MHz. The size gets unwieldly. Anyone have suggestions?

Adding my own...

Your write email to news groups that has little or nothing to do with the
news group. Having the text "typical ham" in your post dowsn't make it
relevent to a ham radio news group.

THREE ARRESTS IN MESA INTERFERENCE CASE

Friday evening August 16th and Saturday morning August 17th Mesa police, with the help of Arizona Repeater Association's Interference Committee, FCC agents and several Mesa hams, executed search warrants and arrested 3 individuals who were suspected of causing interference by transmitting on police, fire, and several other agencies channels. More arrests are pending.

This interference has consisted of transmitting false officer emergency calls "999", hot tones, using profanity and describing sex acts on the police channels. This has interfered with police and fire traffic and caused delays in the ability to dispatch emergency traffic. These individuals are also believed responsible for malicious interference, bomb threats, and 911 abuse on numerous local amateur repeaters, which is what lead the Interference Committee to their locations.

All three subjects were identified and arrested for interfering with public safety frequencies, impersonating a police officer, and false reporting. Their electronic equipment, including radios, computers, and telephones has been seized and numerous felony and misdemeanor charges are pending. They may also be facing sanctions from the FCC.

To the best of my knowledge TEN-TEC no longer has any retailers, they
sell factory direct. They do have a Web page though. I have owned over
12 Ten Tec rigs and wish I kept them all. They are not quite as fancy as
the Jap rigs, But are a TRUE HAM RADIO. A rig the average ham can
understand, and thats what its all about!

>the rsgb have 2,000,000 cards through per year but only 50% are
>collected. what a waste of trees by radio amateurs.
>what can be done to lessen this waste.

This is partly due to a peculiar feature of the RSGB:
They distribute cards also for non-members to the local
QSL-managers. A ham in the UK who choses not to be
RSGB member can either not bother to collect the QSL cards
or if he does he woukd have to reply by mail.

Returning QSL-cards addressed to non-members to the sender, like
some buros do, is may be more work but clarifies the fate
of the card for the sender.

I thought about building a simple Morse Code keyer with
the PIC (Parallax & Micrchip) 16C71 series

has there been any recent articles on this ?? in the ham mags??

two POTS - Speed & Pitch into the A/D Inputs

3 TTL Inputs -- Dash Paddle, Dot Paddle, & Straight Key

two outputs - Key rig - Open collector
and speaker driver.

perhaps another push button input for record to use the
memory as a CW buffer to memorize call signs ...

the chips are about $7 each and two pots and a switch and
paddles and a xtal is the cheapest most band for the buck
keyer i know...

Any feed back - email me too !! thanks -- Wb9raa Ed March

I'm selling my Icom Z-1A with detachable face plate. IT's brand new. I've only used it for 1 month. It is a true duel band, with cross duplex. I've only used it in the car. It has a special tone squelch and everything. This one of the best I've ever used. I bought it for $450, and am willing to sell it for $350 FIRM.

I have been looking for two weeks for information on all Amateur
Magazines except QST.
Would you send me email giving me the email or web internet
address of any of these magazines. Of course the ddd phone number
is the last resort.

This kind of information is generally on publishers page 2 or 3.

Thanks for your help
John

Hey Lame,
There are two sources for a lot of shareware like you are looking for.
1. The ARRL has a lot of stuff you can down load from their
automated mail server or you can ftp from the same server.
2. A lot of the CD's with call sign data bases have tons of
software on them. I just got ver 7 of QRZ at the hamfest in
Springfield and it has a two page list of zipped up terminal progams.

If your mail program will handle attachments, I will be glad to send
you some of them. Contact me directly if you do. I don't think it
would be good to send big files through the list-server.....

If the lowered deviation levels don't mean anything to you, then make
sure your CTCSS unit on the repeater is functioning properly. I'm sure
this is why most repeaters have them, to "reduce interference".

I've heard that there are devices on the market that will analyse a signal generated by a transceiver and be able to distinguish it from others on a recheck.

Has anyone else heard of these, and if so, do they work well? Do they track the oscillator? How do they work?

Thanks

I'm thinking about doing just that, as an add-on to the NorCal "Forty-9'er" kit that I just received in the mail yesterday. The Forty-9'er is so small though (52x68mm) that adding two of my junk-box panel-mount pots would just about *double* its size.

My idea was to use the PIC16F84 (was PIC16C84A) and no pots. With just a couple really tiny pushbuttons, I can "chord" with the paddles to adjust speed and tone or to store a pattern in the on-chip data EEPROM (which the PIC16C71 doesn't have).

I'll have one button held to adjust speed, the other held to adjust pitch. Thumb paddle decreases, finger paddle increases. Hold both buttons while you store a Morse pattern. Pressing both buttons without hitting a paddle plays back the pattern.

I'll keep the current settings for speed and pitch in the data EEPROM as well, so you won't have to readjust them every time you power up.

I'll post the listing once I've got it done.

>Jim.. WA5VPW..
>
I routed cables in my 84 Toyota Landcruiser and 1995 Dodge Ram. First, I used 12 gauge stranded wire for the leads. Next I looked on the firewall for a rubber grommet or gasket that had a cable (mechanical or electrical). Find one nearest the point of hook up on the interior and also on the side of the battery. Then take a stiff wire (yes, the ubiquitous coat hanger will work) tape the ends of the wires to it and poke it through the grommet or gasket from the engine side - usually the easiest. Find the end of the stiff wire and pull through into the passenger area - make sure you have enough wire to work with and get to your connection point. You may want to use cable ties or tape to keep the wire contained under the dash. If you are really paranoid, you can put tape over the wires where they go through the firewall to reduce the possibility of abrasion.

Carefully and neatly route the wires to the battery area. Make sure you avoid moving parts, hood closure, etc. I put fuses in both wires as I have seen recommended. Make the appropriate battery connections. I used crimp-on connectors and fastened them to the bolts on the battery cables. Again, use cable ties or tape to keep the cable secured.

Make sure the connector you use inside the passenger compartment does not leave the hot wire exposed when its disconnected from the radio.

So far these installations have survived a lot of off-road driving in all kinds of conditions. It's not really too hard.

>Super Morse is a good program. it has been around for years and has
>quite a few different versions.

True,

but it has lots of bugs. An older version I used was very difficult
to get running, and in the version 415 (current?) the feature
"enhance words" does not function right: the program draws only
words beginning with s to z from the thesaurus. I am using
version 4.06 occasionally and it seems to be OK. Another problem is the
audio quality: SM like some others produce noticeble key clicks,
making the character H sound like tick tick tick tick at 30wpm.
I have com across a program that is much better at that.

I think this might be what the cellular industry is calling
"RF Fingerprinting". Sure sounds similar. Don't know for sure how it
works but it's been going around in the cellular groups for a while.
I think they look at spurs, harmonics, response and such. It's some
sort of ultra gee-whiz DSP stuff as far as I know. The cell carriers
are looking at (using?) it to prevent cloning, or the abilty to use a
cloned phone.

HI Rick-
I am a VE with both ARRL & W5YI, I have been testing since 1990.

To upgrade from "Tech-Plus" to General you WILL need to pass element
1B which means 13 WPM Morse Code. In addition, unless you have a
tech license previous to 1987 (I don't remember the EXACT month &
day) you will need to pass element 3B which is a 25 question test.

You can also call the ARRL VE group at 800-927-7583.

According to wht I pulled up on QRZ his tech plus was issues just this year so he will indeed have to pass BOTH the 13 WPM & the 25 question element 3B.

BTW- It sosts $6.05 per testing session, there is NO limit on how many elements may be taken per session.

You need to pass the 13wpm code exam, as well as the General
written exam.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 AUGUST AND FORECAST FOR 24 AUGUST - 26 AUGUST

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 22 Aug
Daily Proton Fluence >1 MeV: 9.3E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 2.1E+07 (normal)
X-ray background: A4.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Aug 25 Aug 26 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Aug: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 22 Aug
Learmonth 12 3343 3121
Fredericksburg 15 5
Planetary 15 5

Observed Kp for 22 Aug: 1111 1222

2B. MAGNETIC FORECAST
Date Ap Conditions
24 Aug 10 Quiet to unsettled
25 Aug 5 Quiet
26 Aug 5 Quiet
COMMENT: Cause of mild activity on 23 August is uncertain.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
23 Aug Normal Normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
24 Aug Normal Normal Fair
25 Aug Normal Normal Normal
26 Aug Normal Normal Normal
COMMENT: High latitudes may have experienced degraded HF comms
on 23 August due to mild geomagnetic activity.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
23 Aug 12

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
24 Aug 10 near predicted monthly values
25 Aug 10 near predicted monthly values
26 Aug 10 near predicted monthly values

: the rsgb have 2,000,000 cards through per year but only 50% are
: collected. what a waste of trees by radio amateurs.
: what can be done to lessen this waste.:
Having read about 6 of the replies to this post, I am somewhat suprized at the remarks - some tongue in cheek. "Don't QSL", "Use E-Mail", "Drop DXCC (or other) certs", "Who wants another (fill in your QTH) anyway?"

Don't QSL - Sure, now the other 50% is out of luck. Many got into the hobby because of the concept of having a snail-mail dialog with others. Wallpapering the shack is inpressive to my non-ham visitors. (I still have plenty of ugly wallboard to cover) I agree that most are the simple, minimum, contest type card - but that is made up for by that infrequent good looking or different card or the occasional remark on the back.

Use E-Mail - Agree that technology provides a more efficient and consistant method of confirmation. BUT this is also a hobby. Are we looking to always let the newest drive out the old? How about stamp collectors trading FAXes? Or replace the Louvre with a server full of gif files?

Drop DXCC certs - See above The same wallboard needs to be covered.

Who wants another xxx anyway - I hope it is a younger ham that is trying to get WAS or still considers a 1 land to 6 land QSO as good DX.

THINK POSITIVE - We all talk about the hobby dying away and only supported by graying OM. Lets encourage the varied aspects of the hobby - 100% return QSL. The cost can't be that great a factor - abt 35 cents in the US and abt a $1 for DX (the Buro is still the best deal here).

Gary-

I believe you! Now, how does that relate to the average Ham? Although 10 mW/cm^2 sounds like a miniscule amount, it doesn't sound so bad when you convert it to 100 W/M^2 (did I do that right?).

What are "real world" exposure levels that a Ham is likely to encounter in each of several areas of the Ham spectrum? Suppose I have a 100 Watt HF transceiver to a dipole, about 20 feet off the ground. Is anyone at risk while I'm on the air? What if I run a KW? What if I use a beam that is 50 feet up?

How about a typical Two Meter installation?

What I'm leading up to, is that the FCC might accomplish more, if they were to perform the math (or make the measurements) for common situations, and publish examples where harm might occur.

>>Either way, the FCC is not going to put out
>>money to hire somebody to sit in your neighborhood to make sure that
>>the FRS users obey the law.

Of course not. But the FCC has, for the first time in history, FORCED co-sharing of a band between licensed, commercial operators and unlicensed moroms, er, I mean, unlicensed operators. With absolutely NO RECOURSE for solving intentional interference problems.

BABY MONITORS - yep, continuous transmission FRS baby monitors are what Tandy has in store for the FRS. Imaging one of these set up within a half-mile of existing GMRS repeater sites - only 1/2 channel away from our inputs.

You're on the right track. If you read the Report&Order, other services
like paging, cellular, etc, received exepmtions for specific scenarios
(like for a given antenna, antenna height, and power below some level).

Why the ARRL went with the silly "prudent avoidance" (whatever that
means)approach is beyond me. What exemption did we wind up with? One,
less than 50 watts (irrespective of freqy, mode, antenna type and height.
This makes no sense. The ARRL "dropped the ball" again.

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #178 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 30-Aug:
-
1. FCC Announces Gate 2 Opening Date for Vanity Call Sign Program
2. JARL/JAMSAT Successfully Launch JAS-2/FUJI-3 Satellite
3. NASA Astronaut Gets License, Scheduled for '97 or '98 Mission
4. ARRL Announces Results of Section Manager Elections
5. "Ancient Amateur Archives" with Bill Continelli, KE2XB
6. Weekly Propagation Forecast
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Comments Filed by ARRL on Part 15 Use of 5 GHz for Data LANs
9. Eli Nannis, K4JMH (ex-W1HKG), Bill Stevens, W6ZM, Listed as SKs
10. Special Event Station Calendar
11. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from Dana Rodakis of St. Petersburg,
Florida, and the AJ1R repeater system, serving Florida's Sun Coast
on 51.84, 145.230, 147.285, 442.075, 443.625, and 443.95 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
```

at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

ny licensed ham can become a rptr owner - there's no virture
>in that - and practically any transceiver can be made into a crude
>rptr. Thus, you hold no special significance in the amateur community; but
>now among the internet community you are scum for not having the courage
>to use your real address to accompany your remarks.

Mackey, KA0SSF
>Owner, 147.435 repeater, Portland, Oregon

Ask John about how he singlehandedly tore up other HAM repeaters in
the portland area. His post he thought was private was funny!

He was apologizing, and trying to explain!

Greetings All

I am collecting ex military radio equipment. One of the pieces in my collection is an australian Field Radio Test Set, model OA-FI-AI,
6625-66-100-5448
6625-66-025-5304
I believe it was constructed in 1971

If anyone has any info on this particular item (circuit diagrams, operating instructions etc) could you please contact me.
Also if you have any old items for sale (preferably working) please let me know.

I can be contacted via e-mail on:
walkindude@fastlink.com.au

or by snail-mail:

Alistair Harding
PO Box 138
Charlestown

>>
>A terribly misdirected group. May be so may not be so. Do you have any
>facts to show that rf is harmless.

It is almost impossible to prove a negative. Please show me a definitive study with a properly established scientific basis that will show that RF is harmful. After all, it is your theory.

This is the same science that stated that bran was wonderful, only to state a few short months later that it was not. The same science that stated that ALAR would kill everyone in the free world, only to state later that the basis was flawed. This is the same science that said the cranberries would cause cancer in huge numbers of people, only to be shown to be false.

Chocolate is SIMILAR to marijuana? The center for science? and disease control is headed by a bunch of people who at best are self serving boobs, concerned only about perpetuating their high paying jobs.

I don't KNOW if RF is harmful or not but virtually everything in the human experience is harmful, or at least potentially harmful. Cars kill thousands every year but we raised the speed limit to 75 knowing that there will be an incremental increase in the highway death toll.

The prez has declared that tobacco (cigarettes) are a nicotine delivery system while VERY recently we de-drugged Nicorette gum. My mother has smoked for over 70 years and is in better shape than most 60 year olds I know. I do not condone smoking but I believe that the benefits to society COULD outweigh the negatives (agreed not likely but every bit as speculative as your hypothesis) BTW, could you name any ... ANY person who has been shown to have died from second hand smoke?? Why has the average lifespan increased in the last 200 years?

Point of speculation.... In 23 years scientists will determine that a pack of cigarettes a day will decrease your chances to contract PMS/Prostate trouble!

Every state (to my knowledge) has some sort of law regulating the sale of cigarettes to minors so enacting new laws is just plain stupid

until we try to enforce the current laws.

Get a clue folks, the government is rapidly taking ALL of yur
Constitutional Rights away. Read the Federalist Papers to understand
that the founding fathers were aware of this possibility and
considered it to be the biggest potential problem the country would
face.

1560. Windows Logging/Packet Freeware

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-24 00:00:00 UTC
From: "Mike McAmis"
Message-ID: <4vlks9$rna@dartvax.dartmouth.edu>
Source record: 218258

Disappointed with your commercial/shareware logging or
packet software for Windows? Try XMLog, freeware that's
available on the Internet. XMLog provides a flexible set
of coordinated logging and packet features.

If you're using a Web browser, start at Boston Amateur Radio
Club's home page (http://www.acs.oakland.edu/barc/barc.html)
- scroll down to the "BARC FTP Archives" section
- click on "FTP Archive"
- scroll down to "Software Archives"
- click on "PC Files"
- click on "logging"
- scroll down and click on "xmlog124.zip"

(Even though the directory says DOS, it really is a Windows
program...)

For ftp users, sign on to ftp.barc.org with the userid
of anonymous and a password of guest. Move to the
/pub/hamradio/dos/logging directory and get xmlog124.zip

XMLog is now also available from ftp.funet.fi in Finland.
Sign on with a userid of anonymous and supply your e-mail
address as the password. Move to the directory
/pub/ham/hf-log and get xmlog124.zip

Version 1.24 has mostly minor improvements - the big changes
are DXCC/WAS/WAZ award submission tracking and support for
the Radio Amateur Callbook (Flying Horse) CD.

Version 1.23 is still available for those with PC's that
only have 4mb of memory (1.24 requires 8mb).

The archives can be busy at times, don't give up if you
can't sign on right away. Let me know if you:
- want more info
- can't fetch the file
- want diskettes instead

Have fun...

1563. GB2RS News 25th August 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-24 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <840904721snx@llondel.demon.co.uk>
Source record: 218261
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

[apologies if anyone gets more than one copy of the main news. This is the third attempt, the others having disappeared without trace]

Good morning. It's Sunday the 25th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

There is a new RSGB QSL Bureau sub-manager for the G0I series of callsigns. He is Anthony Lord, G4KHT, whose address is correct in the RSGB Call Book. Anthony takes over the position from Mr I Webb, G4JFF, who is thanked for his services as sub-manager for this series in the past.

This weekend, the 24th and 25th of August, is the Historic Scotland Weekend, and ten special event stations are on the air from historic sites around Scotland. Each station is active until 1700UTC Sunday, mainly on 20, 40 and 80 metres SSB. Details of the callsigns and location of the stations can be found on page 94 of the August RadCom, but please note that unfortunately GB2HSA will not be active. An award is available for contacting these stations: for full details, contact Mike Dalrymple, GM4SUC, whose address is correct in the Call Book, or phone him on 01292 443127.

Listeners to the 2 metre GB2RS news broadcast at 9.30am local time in Cornwall should note that from the 1st of September it will be made through the north Cornwall repeater on channel R5, and not on S21. This will be for a trial period of four months. Reports will be welcomed either by the newsreader or direct to GB2RS manager Ian Kyle, GI8AYZ, whose address is correct in the RSGB Call Book. The purpose of the experiment is to improve coverage in this difficult terrain.

Jamboree On The Air takes place this year over the weekend of the 19th and 20th of October. All those applying for a GB special event callsign for Jamboree On The Air will receive a free 'JOTA Pack' containing lists of participating stations and countries permitting third-party greetings messages, plus a newsletter from the Scouts Association. Groups intending to operate during Jamboree on the Air using club station callsigns with prefixes such as GX or GS should inform Eva Telenius-Lowe at RSGB headquarters by the 4th of October if they also wish to receive a free JOTA Pack.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Corsica, F2YT is active as TK/F2YT from now until Monday the 2nd of September. He will also try to operate from some of the coastal islands off Corsica.

From Crete, IV7VEH is active as SV9/IV7VEH from now until Thursday the 29th of August on SSB only.

And from the Aland islands, OH2KMG will be active as OH0KMG from Friday the 30th of August for three days, on CW and SSB.

Now news of some special event stations:

GB2LAM is operational from Ludham Air Traffic Control War Museum this weekend, the 24th, 25th and 26th of August. The station is operational on 2, 20, 40 and 80 metres using FM, CW and SSB.

And GB4DAR is being operated by the Derwentside Amateur Radio Club at Allensfords Show today and tomorrow, the 25th and 26th. The station is on the air between 10 and 1700 UTC, mainly on 40 and 80 metres.

Next the Rally News:

The Torbay Amateur Radio Society rally is held at the Torbay Leisure Centre, Clennon Valley, in Paignton, today, Sunday the 25th of August. Doors open at 10.00am.

The Galashiels and District Amateur Radio Society's open day and rally also takes place today, the 25th, at the Volunteer Hall, St John's Street, Galashiels from 11.00am.

The Coleraine and District Amateur Radio Society's radio rally is being held at the Lodge Hotel in Coleraine on the 25th. Doors open at 12.00 noon.

Huntingdonshire Amateur Radio Society are holding their annual August Bank Holiday Monday rally on the 26th of August at The Ernulf Community School, St Neots, Cambridgeshire. The event features a car boot sale and a large hall with traders. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For further details contact David Leech, G7DIU, on 01480 431333.

And Swansea Amateur Radio Society are also holding an amateur radio and computer show on Monday the 26th of August in Singleton Park, Swansea, as part of the Swansea City and Council Summer Show. Doors open at 11.00am and for further details you can contact Roger, GW4HSH, on 01792 404422.

The Milton Keynes and District Amateur Radio Society Radio Fayre takes place next Sunday the 1st of September, in Bletchley Park. There will be a bring and buy stall, a club antenna erecting challenge, Morse tests, demonstrations by service organisations, and arena events for the family, including live music. Talk-in will be on 2 metres channel S22 and for further details please ring 01908 672920.

The Bristol Radio Rally and Computers and Electronics Market will be held at the Brunel Centre, Temple Meads Station, Bristol on Sunday the 1st of September. For further details ring 01275 834282.

Next Sunday, the 1st of September, the Telford Radio Rally will take place at the Telford International Centre. The event features dealers, a flea market, bring and buy stand, Morse tests on demand, and an RSGB book stall and membership information stand. For further details please ring 01743 235619.

Now for the contest news:

The Worked All Britain 144MHz QRO Phone contest will be on Sunday the 15th of September and not on the 8th of September as previously advertised. Full details are available from the WAB Contest Manager, Graham Ridgeway, G8UYD, whose address is not correct in the 1996 Call Book. Graham's address is 6 Rosewood Avenue, Blackburn, Lancashire, BB1 9SZ.

The fourth of six sessions in the RSGB 10GHz Cumulative Contest takes place today, Sunday the 25th of August, between 0900 and 2100UTC. The rules were published in the March 1996 RadCom.

And now the solar factual data for the period from the 12th to the 18th of August, compiled by Neil Clarke, G0CAS:

Solar flux levels declined slightly and averaged 69 units. The 90-day solar flux average on the 18th was 70 units. X-Ray flux levels also declined and averaged A1.5 units. Geomagnetic activity started the period at 'quiet' with an Ap index of 5, but during the second half of the week increased to 'unsettled', with an average of Ap 9 units.

Now the ionospheric data for Central France for the period from the 9th to the 15th of August. The average F2 daytime critical frequencies declined to 5.7MHz on the 11th and 12th, then increased to 7.2MHz on the 14th and 15th and the average was 6.4MHz. The darkness-hour lows averaged 3.1MHz. The daytime highs took place between 1900 and 2100 hours every day and the darkness-hour lows were between 0200 and 0400. 15 hours of blanketing E was recorded by Meudon.

And lastly the solar forecast. This week the more active side of the sun is expected to be looking our way and solar activity could increase from very low levels if any solar flare activity takes place. Solar flux levels are expected to increase to the high 70s or even the low 80s. Geomagnetic activity is expected to be 'quiet' for most of the week, but levels could increase around midweek. MUFs during daylight hours at equal latitudes are expected to be about 19MHz for the south and 16 MHz for the north. However, these levels could be slightly higher, especially down to South Africa and South America, and particularly during the evening. The darkness hour lows are expected to be about 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Kilo and M1 Alfa Yankee series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Golf series.

Hmmm. Address is different, but name and birth date are the same. Now this guy is in _big trouble_ with the FCC for not sending in his 610 to change his address :-)

And don't go ragging on the Technicians - this guy learned the code!

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 922 18TH AUGUST 1996

COLS COLUMN

IN LAST WEEKS CAST I SAID THERE WOULD BE A REPORT OF THE
ANARTS MEETING HELD ON FRIDAY 9TH AUGUST. HERE IS A SUMMARY OF
THE MEETING.

THE COMMITTEE DISCUSSED A SUGGESTION BY RON AB5KD REGARDING
THE CERTIFICATES AWARDED IN THE ANARTS WW RTTY CONTEST. HE
SUGGESTS A CERTIFICATE BE AWARDED TO :

THE FIRST FIVE IN WORLD IN EACH CLASS.
THE FIRST THREE IN EACH OF THE SIX CONTINENTS IN EACH CLASS.
FIRST THREE IN EACH MULIPLIER IN EACH CLASS
(THAT IS EACH COUNTRY OF DEFINED AREA).
THE TOP WORLD CONTESTANT IN EACH CLASS TO RECEIVE A PLAQUE.
EACH OTHER WINNER TO RECEIVE EITHER A CERTIFICATE ENDORSED
WITH ALL THE NECESSARY INFORMATION SHOWN, OR A SEPARATE
CERTIFICATE TO COVER EACH AWARD.

THE COMMITTEE AGREED WITH THE SUGGESTION, IT MAY BE TOO LATE
FOR THIS YEARS CONTEST, BUT JIM THE CONTEST MANAGER WILL TRY
TO INCLUDE THE NEW CERTIFICATES IF HE HAS TIME. THE RULES WILL
BE AMENDED FOR NEXT YEAR.

THE FOLLOWING WERE DISCUSSED :

THE CONTEST MANAGER NOW RESIDES IN KARUAH, LOCATED NORTH OF
NEWCASTLE NSW. THE CONTEST ADDRESS IS STILL PO BOX 93
TOONGABBIE NSW. EXPERIENCE HAS SHOWN THAT IT TAKES A FEW YEARS
FOR OVERSEAS STATIONS TO SEND THEIR LOGS TO THE NEW ADDRESS.
IT WAS DECIDED TO KEEP THE PRESENT ADDRESS AND EITHER THE
PRESIDENT OR THE SECRETARY WILL COLLECT LOGS FROM THE PO BOX
EACH WEEK AND FORWARD THEM ON TO THE CONTEST MANAGER.

MEMBERSHIP. A NUMBER OF LAST YEARS MEMBERS HAVE NOT YET
RENEWED THIS YEAR. THE COST IS STILL TEN DOLLARS, IF YOU WOULD
LIKE TO BE A FINANCIAL MEMBER PLEASE FORWARD THE FEE TO THE
SECRETARY AT THE ADDRESS SHOWN AT THE END OF THE CAST.

INCREASED PARTICIPATION IN ANARTS CONTEST. THERE HAS BEEN AN
INCREASE IN THE NUMBER OF STATIONS TAKING PART THIS YEAR AND

IT MAY BE DUE TO THE EXTRA COVERAGE FROM BEING PLACE BOTH ON THE INTERNET AND DIVISIONAL BROADCASTS.

SO FAR LOGS HAVE BEEN RECEIVED FROM 18 VK STATIONS AND HOPEFULLY MORE ARE STILL TO COME. THEY ARE VK2KM CTD DPM BQS BAT AIC ALK VKEAMK DXI GN EBP VK4OI VK5AI RV VK6GOM YV KD AND CP. WE NEED TO WORK ON VK4 VK7 AND VK8.

THAT WAS ABOUT THE END OF OUR DISCUSSIONS. AFTERWARDS PAT VK2JPA GAVE US ALL COFFEE AND BISCUITS AND WE SAT AND WATCHED THE AMATEUR TV BROADCAST BEING TRANSMITTED BY THE GLADESVILLE AMATEUR RADIO CLUB. I MUST SAY THEIR PRESENTATION IS VERY PROFESSIONAL AND IS A CREDIT TO THE CLUB AND ALL WHO TAKE PART IN THEIR PRODUCTION. BY THE WAY THANKS TO KEITH VK2ZZO FOR THE USE OF HIS HOUSE FOR OUR MEETINGS.

THATS ALL FOR THIS WEEK. 73'S DE COL VK2CTD.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(09 AUGUST - 15 AUGUST)

ISSUED ON 16 AUGUST 1996

SUMMARY
Date 09 10 11 12 13 14 15
10cm 70 72 73 70 70 69 68
A 8 6 5 6 8 13 (12 ESTIMATED)
T 7 11 2 -4 -3 2 3

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 9TH TO 12TH AUGUST; QUIET TO UNSETTLED 13TH AND 15TH; AND UNSETTLED TO ACTIVE ON 14TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, EXCEPT FOR PERIODS OF ENHANCEMENT TO 30 PER CENT ON 11TH AND 14TH. SPREAD F WAS REPORTED ON 13TH AUGUST.

FORECAST (16 AUGUST - 22 AUGUST)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 266. Excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N5OGP, K6ANP, NL7TB & USI, 5B4JE, 4Z5GY, DF4RD, F5CCO, F5JJW, F5JPE, G0ARF & BARTG GB2ATG News, JA1HGY, JF2MBF, JJ2QXI, PA3ERC, RA3AUU and VP2ML/WB2CHO following DX information.

4X9 & 4Z9, ISRAEL. The prefixes of 4X9 or 4Z9 are being used by Israeli novice class licences. Following the 9 digit, there should be 3 letters suffix (e.g. 4Z9FIG). This licence permits operating on HF (40 and 15 meters) in CW mode only.

A35, TONGA (UPDATE). An update received direct from Paul Kidd, KK6H, now signing A35RK, states he arrived in Tonga on July 31st. He became active on August 1st and at the present, he is operating 40-30-20-17-15 meters with operations on CW/RTTY/AMTOR. He is expecting a "package" of new antennas

from Force 12 soon. When they arrive he will be active on 80-10 meters. Paul states again there will be NO 160 meter operation at present, and it's very doubtful that he will have a 160 meter antenna in the near future.

CARIBBEAN DXPEDITION. Peter/PA3BBP, Rob/PA3ERC, Ronald/PA3EWP and Dick/PA3FQA, all members of the Contestgroup Oude Maas (PI4COM), will spend their HAM holiday on Guadeloupe (FG), Dominica (J7) and Martinique (FM) between September 13th and October 6th. They will be active with two stations around the clock on all bands CW, SSB and RTTY.

JD, OGASAWARA ISLAND (Just a reminder!). Begin looking August 14th for a large operation to take place from here. Operations will last for about 9 days with the team signing JD/7J1AYK. Details on frequencies and their WEB-site can be obtained in OPDX.263 by sending a message to:

opdx-request@inshore.org
SUBJECT: archive
get volume96/263.0 (In the message text. This is case sensitive.)

RTTY CONTEST. Here is your chance to work some new ones on RTTY! The SARTG WW RTTY Contest will be next weekend and has three periods of operation starting 0000-0800z and 1600-2400z Saturday, August 17th. The final period is 0800-1600z Sunday, August 18th. Exchange consists of RST plus QSO serial number commencing 001. Bands to be used are: 3.5, 7, 14, 21 and 29 MHz.

SPECIAL CALLSIGN. Aris, 5B4JE (Genernal Secretary of CARS), reports Cyprus stations for the months of August and September will be using the special callsign C4UWC. The callsign will be used to celebrate the 5th World University Windsurfing Championship which will take place in Limassol, Cyprus. Participating stations will be signing their callsign/their suffix.

VP8, FALKLAND ISLANDS. Sergej, RW0LBW, is currently signing VP8CWI and is the first Russian HAM on Falklands. He started his activity in the middle of July and will be active for about 1 year. There have been no QSNs reported recently. Sergej does ask for QSLs to be sent: Box 559, Stanley, Falkland Island

>the challenge (if any) of such a design?

At VHF and above, a standard reference gain antenna should be
practical to build and use as a probe for power density using
a bolometer readout. We can probably ignore the near field for
VHF+ fixed station antennas in most cases since they'll typically
be 10 wavelengths or more from the operating position (or the public).
In cases where we can't, measurement will be tricky.

Calibration of this setup should be fairly simple, using an identical
antenna and known output power transmitter at a fixed distance for
a calibration source.

For HF, a shielded single turn resonated loop of specified enclosed
area should serve as a suitable H-field probe. For the field strengths
of concern, a simple diode detector should suffice.

Direct calibration of this setup could be a bit more difficult,
and an indirect method may be required.

>track the oscillator? How do they work?

These transmitter "fingerprinting" methods work on the basis that the amplitude and frequency settling characteristics of individual transmitters at keyup are determined by component tolerances as well as by circuit design. While units of the same make and model will have generally similar "fingerprints", component tolerances will often make it possible to separate one from another. Other clues, such as hum or alternator whine can also be used to tag a particular installation.

These methods are far from foolproof, but used in conjunction with standard DF techniques, they can be an aid in narrowing down a list of suspects, IE if there are several transmitters in the general area from which interference is coming, some of them can be ruled out if their "fingerprint" is grossly different from the signal being tracked.

>not with the ladder line as long as it would mount in the pvc pipe.

Count on the PVC detuning the antenna. It will change the electrical
length of the antenna by a factor determined by its dielectric constant
and the ratio of antenna element diameter (and internal position) to
pipe diameter. Using a flexible conductor inside the pipe could make
this an intractable problem to calculate. Cut and try may be the only
way. OTOH, using a rigid conductor fixed in position inside the pipe
would make the design amenable to calculation (and make it reproducible).

Now that makes sense Fred. Will it happen? Hell no. Because that
makes sense Fred.

1576. Alinco DJ-191T Mod

I was speaking to Bob, WN3K, manager of HRO Delaware. He says he's
short of part-time workers. The job offers lots of hard work and
meager pay, but is a lot of fun (in the words of Bob).

Anyway, should you have any interest whatsoever, give him a call at
1-800-644-4476. I have no connection whatsoever with HRO.

It looks like none of the other responders have mentioned that the
ruling does NOT apply to owners of townhomes/condiminiums where the
roof and surrounding real estate is not the sole property of the
owner, but is shared by the group.

If this is the case where you live, the ruling will not help you.

From: Mike Snowden <Pmikes@fishnet.net>
Message-ID: <321F60DB.1E07@fishnet.net>
Source record: 218279

I have two cushcraft 13B2 yagi antenna which I will phase together using the factory kit. I have been trying to find out which will be the most effective way of mounting the pair. Since I will use them for SSB work, I know they must be horizontally polarized. The big question is what is the best way to stack them??? Side by side or top and bottom. The books do not seem to clear. What will the different effects be for each type of mounting? I could really use some help on this. Thanks, Mike K6YPB

ccart@erols.com (CHRISTOPHER CARTWRIGHT) writes:
>I think this might be what the cellular industry is calling
>"RF Fingerprinting".

At a ham convention a few years back, one such device was being
demonstrated. Apparently it samples the frequency stability of the
first few milliseconds of each transmission and compares it to a
learned database of transmitters. Since the instantaneous frequency
stability of a transmitter being keyed is highly dependent on individual
component tolerances and aging, it's said to be unique, and capable of
identifying a particular unit.

See the patent for more details, I suppose.

1583. IPS Daily Report - 24 August 96

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-24 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <4vo2ji$6l@flare.syd.ips.oz.au>
Source record: 218281
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 AUGUST AND FORECAST FOR 25 AUGUST - 27 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 23 Aug
Daily Proton Fluence >1 MeV: 6.7E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 1.4E+06 (normal)
X-ray background: B2.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Aug 26 Aug 27 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Aug: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 23 Aug
Learmonth 9 3222 3222
Fredericksburg 10 13
Planetary 8 15

Observed Kp for 23 Aug: 2454 3122

2B. MAGNETIC FORECAST
Date Ap Conditions
25 Aug 8 Quiet to unsettled
26 Aug 9 Unsettled
27 Aug 18 Unsettled to active
COMMENT: A coronal hole is visible on the eastern hemisphere
of the Sun. The hole appears stronger on this rotation. Recurrence
suggests increased activity (active levels) for 27 August. Other
factors also indicate active levels may occur on 30 August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
24 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
25 Aug Normal Normal Fair
26 Aug Normal Normal Fair
27 Aug Normal Fair Poor
COMMENT: High latitudes may experience degraded HF comms during
interval 27-30 August.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
24 Aug 13

Observed Australian Regional MUFs:
Darwin: Depressed 15% during the local day,
near predicted monthly values during local night.
Spread F observed 13-16UT.
Townsville: near predicted monthly values.
Sydney: near predicted monthly values, spread F observed
15-20UT.
Hobart: Near predicted monthly values.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
25 Aug 10 near predicted monthly values
26 Aug 10 near predicted monthly values
27 Aug 10 near predicted monthly values
COMMENT: Degraded HF conditions may be experienced on 28 August
for Souuthern region Australia.

>requirement...Otherwise it would be CB no?

No. If you think that the only significant difference between
amateur radio and CB is a Morse test, then you don't understand
amateur radio at all. Unfortunately, you aren't alone.

>mW/cm^2 sounds like a miniscule amount, it doesn't sound so bad when you
>convert it to 100 W/M^2 (did I do that right?).

That's right, and it's the field you'd see 36.1 cm from the radiation
center of a dipole with a 100 watt transmitter driving it, or 8.1 cm
from a 5 watt transmitter's antenna, IE a HT with a rubber duck held
in front of your face.

>What are "real world" exposure levels that a Ham is likely to encounter in
>each of several areas of the Ham spectrum? Suppose I have a 100 Watt HF
>transceiver to a dipole, about 20 feet off the ground. Is anyone at risk
>while I'm on the air? What if I run a KW? What if I use a beam that is
>50 feet up?

The HF transceiver and dipole would be generating a field in excess of
the standard for H-field exposure (depending on antenna orientation with
respect to the point of measurement). You're still in the near field at HF
frequencies, and the behavior there is more complex. We have to look at
E-field and H-field exposures separately, and not just at power density.
(You'd be Ok with respect to power density alone at that separation.)

A kW would aggrevate the situation. 10 db power gain equates to a 3.16
times larger exposure radius for the same field intensity. A beam on a
50 foot tower would generally be in compliance with the standard, even
at a kW (barring some obscure pattern anomaly caused by the particular
installation, IE feeder radiation). That's because its pattern isn't
isotropic, and the main lobe would be well above populated areas.

>How about a typical Two Meter installation?

An on-glass antenna installation with a 100 watt transmitter in a car
would exceed 10 mW/cm^2 exposure at the driver's (or passenger's)
position. A cowl mount might too. A roof mount would generally be Ok

(except for people standing next to the car). At home, a spacing of 1.61 meters from the operator would be outside 10 mW/cm^2, but would have to be 5.1 meters away to meet the 1 mW/cm^2 exposure standard. In general, the new standard requires a spacing of 3.16 times greater than the old ANSI-82 10 mW/cm^2 standard required on 2m. If you're using a gain antenna, things become more complicated. In the main lobe, safe exposure distances have to increase in proportion to the power gain, in the pattern nulls, safe exposure distances are lessened from what they would be with an isotropic source.

>What I'm leading up to, is that the FCC might accomplish more, if they
>were to perform the math (or make the measurements) for common situations,
>and publish examples where harm might occur.

They did. About a year ago, the FCC OET went out in the field and examined 9 amateur installations picked at random. The results are available as a PDF file on the FCC web site (148 kb file). While many amateur installations were within the NCRP-86 limits, they found some which weren't. And those weren't aberrant installations, but rather some fairly common ways amateurs set up their stations.

IMHO, the most common dangers for amateurs operating VHF+ are on-glass mobile antennas with typical VHF rigs at power levels of 25-45 watts, and using a 5 watt HT held in front of the face. (Note that these setups are exempt from the new regulations for *political* reasons, but that certainly doesn't mean that they are safe. It is no accident that 50 watts was chosen as the cutoff point. Look at the power output of the typical VHF mobile rig, they fall just under the exemption limit.)

For amateurs operating on HF, the big danger areas are indoor antennas and ground mounted verticals. The FCC did find some "hot spots" in stations using open wire feeders or end fed long wires. (Mobile setups are at risk too, but at HF the car body does offer some Faraday shielding for the operator. The big hazard is to members of the public standing outside a parked car that has an operating HF setup.)

A final note. The standard requires exposures to be averaged over a 6 minute period for operators, or a 30 minute period for the general public (whose standard exposure levels are lesser than for operators). So a station whose peak exposures violate the standard may still be Ok if the average exposure level is sufficiently lower than the peak. Again this is a somewhat *political* decision and doesn't mean it is safe.

A non-amateur example: a 250 kW pulse radar whose average power is only 100 watts might meet the standard but still fry your eyes in some situations. Peak power does matter in some cases. I've tried to heat hotdogs by holding them in front of radar dishes with a wooden stick. The dog's surface *explodes* into blisters, but the center remains cold because the *average* power is too

low to cook it through. When I do this using our satellite uplink truck's dish (800 watts FM), the dog cooks nicely because it's in a constant power field of sufficient intensity. Those explosive blisters could still do you harm, even if they don't cook you through like a beam with higher average power can.

1586. Need IL & WI on 10 & 15 Meters

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-24 00:00:00 UTC
From: chohenste@skyenet.net
Message-ID: <chohenste-2408962353320001@news.skyenet.net>
Source record: 218284

I'm working on my five-band Worked All States and need IL & WI on 10 & 15 meters (WI worked twice on 10 meters but unable to get card). If any hams in these states need IN on these bands, or simply want to help, please reply; perhaps we can exchange phone numbers and call each other if we hear short skip. QTH is ninety miles east of Chicago. Working with indoor dipoles in apartment--no beam.

Also need AK on 10 & 15 meters (I'm not holding my breath). On 10 meters only I need HI, ID, NM and UT. WAS already completed on 80, 40 & 20 meters but glad to help anyone who needs IN on these bands and wishes to set up a sched.

Thanks,
n9sqe

It is available at www.fcc.gov. It is longgggg.

This is where I found it after being alerted by the FCC Daily Digest.

Also on the Daily Digest. Recently Centel Cellular was fined $3,000,000.00
for tower violations. Seems that they do not understand Air Safety Zones.
A tower 187 feet high, 2.8 miles from runway, no lights! Did not reply
to FCC for site data. Filed with FAA 5 months after tower operational
for permission to erect tower. What a list of problems. Fine reduced to
$2,000,000.00. After 6 zeros, what does it matter the number in front?

Should depend on date of Tech Plus license. I am a Tech Plus (23 years)
The theory test I took (not memorized from a book, the question
pool was NOT in the public domain) was the same as General. For me to
upgrade only requires that I pass 13 WPM cw.

Fuse holders can be bought at Auto parts stores and/or hamfests.

I did it this way: ----|
| |-----------|
Battery + ---------| | |----------------
| |-----------|
----|

```
|----
|-----------| |
Battery - ---------| | |----------------
|-----------| |
|----
```

Note the reversed fuse holders. If they are installed this way, the risk of connecting the polarities is greatly reduced.

Browsers keep track of the numbers on the articles. News groups place
the articles in numberical order.

When you say CATCH UP. The only thing you ae doing is resetting your
counter to the last number in the news group. Thus you will not be
able load any articles prior to that number on that news group.

DON'T use catch up unless you want to skip a bunch of articles and be
ready to read only new posts.

yeah, when they work they're grand. but there seems to be little if any rechecking to see if a url on file at a search location is really there - so you might get 1 of a million possible listings with about 999,000 of them unusuable at all.

of course, there's one location where you have to download files (getting a catalog), expand, run an installation program on the data, then you find you have a bunch of directories and a ton of HTML files to pull up in the browser to view 'em...(now, THAT'S comedy). <sigh>

No, CB spends most of the time BSing (with a liberal does of milicious
interference). 2m seems to be going this way.
Ham has CW, DXing, contesting, experimenting, homebrewing, paper
chasing, worldwide BSing, education, incentives, packet, ATV, parties,
clubs, MARS, helping with emergencies, providing communications for
events, transmitter hunts, satellites...
There is a lot more to ham radio than spending hours on a repeater just
for the sake of talking. When you get bored with any part of the hobby,
you can do something else. I always tried to teach my classes:
Ham Radio is to be enjoyed, but not at the expense of others.

The DOT is at 4802 Sheboygan Avenue in Madison (53708).

The number for the special plates unit is 608-266-3041 though any
local motor vehicle services office can help.

Mike Snowden (Pmikes@fishnet.net) wrote:
: I have two cushcraft 13B2 yagi antenna which I will phase together using
: the factory kit. I have been trying to find out which will be the most
: effective way of mounting the pair. Since I will use them for SSB work,
: I know they must be horizontally polarized. The big question is what is
: the best way to stack them??? Side by side or top and bottom. The books
: do not seem to clear. What will the different effects be for each type of
: mounting? I could really use some help on this. Thanks, Mike K6YPB

There is no requirement that antennas be horizontally polarized, for SSB
or any other mode.

The advantage of horizontal polarization is that the majority of manmade
noise is vertically polarized, so the added isolation helps. However, when
it comes to DX, the polarization can change completely - so it is a pot
shot.

If you stack them vertically, then the vertical beam width will be
narrowed. Stack them horizontally, and the horizontal beam width will
be narrowed.

The above assume that the antennas are spaced properly, and fed with the
proper lengths of phasing line.

Bill

1605. Inter-Agency Comm. lacking

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-25 00:00:00 UTC
From: jamoran@indirect.com
Message-ID: <4vpbr3$rj4@globe.indirect.com>
Source record: 218303
Cross-posted to: alt.law-enforcement,rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc

heard a crime spree unfold on the scanner yesterday (Sat 8/24) in the Phoenix area that seemed to show the lack of communication or difficulty of coordination amoung different agencies:

Subject steals car from auto Dealership, (Phoenix) commits a robbery (Phoenix), races across town, gets on the Freeway (DPS/Highway patrol), gets to the tempe area, dumps his corvette and steals another car from a car wash (tempe). the two guys split up, one breaks into an apartment and holds up there for hours (tempe), while his partner attemps a robbery and car jacking in Scottsdale.

I have 4 scanner radios here on my desk by my computer. I was able to use one radio to monitor the Phoenix PD Chase frequencies (154.89/453.1) and scan the other phoenix frequencies. I used my second Scanner to monitor the Highway Patrol Frequency (460.325), I used the third radio to monitor the Tempe (860.7375, 859.7375) and Scottsdale (860.9625, 859.9625) frequencies. I used my Sony-2010 to monitor the aircraft frequencies for any helicopter activity.

it seemed that during this entire incident one agency had difficulty figuring out what the other was up to unless a represenative from each agency was standing side by side....Each of the dispatchers (Highway patrol, Phoenix, Tempe,and Scottsdale) acted as if they had no knowledge of what was happening on the other frequencies!

The Fire Departments use an interagency frequency (154.28) thats used by all responding fire units when there is a fire involving multiple fire departments.

This makes the case for an interagency frequency where all agencies involved in a chase or crime spree that goes across jurisdictions can be in instant contact with each other and easily share information....IN most cases, a dispatcher from agency A will call Agency B..Sometimes, a helicopter will come up on the frequency used by the other agency.

>written exam.

NOT necessarily true. You could be a "grandfathered" tech plus.
That depends on the date of your original technican license. If you are
a technician class licensee claiming "grandfather rights" to elements 1A
and 3, (license issued on or before 3/21/87) or to element 1A (license
issued after 3/21/87 but before 2/14/91) the burden of proof to your
claim rests with you. An original CSCE showing successful passing of
those elements and/or license showing technician privileges (or novice
for element 1A) within those "dates windows" along with your current
license are examples of acceptable proof to most VE's/VEC's.

If you dont meet those dates windows, then what Rick says is true.

In my opinion, a person is a loser if they write email to news groups that
has little or nothing to do with the news group.

> > Having the text "typical ham" in your post dosn't make it
> > relevent to a ham radio news group.

Since your post is about losers, not ham radio, you specificly are a
loser for posting that message to a ham radio news group.

> What does that loser comment have to do with, knitting?

Your post doesn't belong in a knitting news group either. Perhaps
"alt.losers.and.whiners"?

I hope your lesson plans are more organized than your posts.

My guess is ROT13 is short for ROTATE 13. If you imagine the alphabet on a
wheel, you would cipher the text by rotating the wheel 13 spaces

1627. LCD display

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-25 00:00:00 UTC
From: Torpor@fnal.gov
Message-ID: <4vqg9c$ekb@fnnews.fnal.gov>
Source record: 218325

I have a Uniden scanner with an LCD display. If the unit is
mounted under the dashboard, the display can be read easily.
But if the scanner is mounted overhead (as in my van), the
display is impossible to read. The LCD digits seem to fade out
when the radio is above the observer. (I'm making an assumption
that the manufacturer intended under-the-dash mounting.)
Is there an easy fix for this?

1628. ARRL SURVEY IGNORES 7 OF 8 WRC-99 ISSUES!

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-25 00:00:00 UTC
From: zut@cais.com
Message-ID: <Pine.BSI.3.93.960825155705.21052A-100000@cais3.cais.com>
Source record: 218326
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

By now you have probably received your September 1996 QST with the ARRL's "WRC-99 Survey. If you thought the survey questions failed to cover all the topics, lacked objectivity, appeared one-sided, and/or seemed to beg for answers that supported destroying the international Morse requirement, now a part of Article S25 of the ITU Regulations, you were not alone.

If you read the International Amateur Radio Union's (IARU) Future of the Amateur Service Committee (FASC) discussion paper, you will find that there are eight major parts of the international Amateur Service Regulations to be considered for revision or elimination during WRC-99. According to the resolution passed by the ARRL Board of Directors during their 1996 Annual Meeting as noted in Minute 89 chartering the WRC-99 Planning Committee (QST, March 1996, p. 75), it mandated that the committee objectively survey the membership regarding all these items. However, the ARRL's "WRC-99 Survey" questionnaire focuses ONLY on the international Morse code HF requirement and totally ignores the other seven WRC-99 topics!

In addition, most of the questions are phrased in a manner that have been heavily criticized as being prejudicial and biased toward supporting eliminating the international HF Morse code requirement. Included among the negative feedback was at least one petition addressed to the committee requesting that the survey be withdrawn.

Furthermore, in his statement prefacing the survey, WRC-99 Planning Committee Chairman Todd Olson (K0TO) stated that the survey was "being sent to a random sample of ARRL members and other licensed radio amateurs" and added that the results of that poll would be tabulated separately. However, according to the committee's chartering resolution, it was authorized only to poll the members. In fact the resolution mentioned surveying "members" three times while making no mention whatsoever of going outside.

Addressing concerns for the separate survey, a spokesman for Readex, Inc., a research firm located in Stillwater, MN, confirmed that they did conduct the poll for the ARRL. He advised that his firm mailed out approximately 2000 survey kits to both ARRL members and non-members with a questionnaire similar to the one published in QST, each containing a dollar bill as incentive to respond. However, he stated that the survey was provided the ARRL's marketing department. He said that Readex, Inc., did not prepare the questionnaire.

If you are concerned about the ARRL's WRC-99 Survey and its being conducted outside the ARRL membership, its failure to address all the eight vital topics being addressed at WRC-99 and/or its perceived lack of

objectivity, send your comments to WRC-99 Planning Committee Chairman, Tod Olson, (K0TO) at k0to@arrl.org. Be sure to include a copy for your ARRL Director. If you believe that the survey should be withdrawn, say so and briefly state your reasons why.

Tell your League the officers and Directors how you feel, otherwise they may assume that either you agree with what they are doing, or that you don't care. Please, let them know.

If anyone would like a e-mail copy of a detailed discussion paper on the ARRL's WRC-99 Survey originally prepared for another venue, please e-mail me directly at <zut@cais.com>. It's length is about 32K.

Extra Class licence (QST April 1995).

1630. QRZ News

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-25 00:00:00 UTC
From: Fred Lloyd <flloyd@qrz.com>
Message-ID: <3220BC5E.71DB@qrz.com>
Source record: 218328

QRZ is pleased to announce that our online callsign lookup
web page now includes lattitude/longitude and County information
for all US hams plus a new beam heading lookup feature.

Here's an example of the new database output:

Callsign: AA7BQ
Name: FRED L LLOYD
Addr1: POB 62807
Addr2: Colorado Springs CO 80962
Country: USA
Class: Extra
Effective: 09 Jan 1990
Expires: 09 Jan 2000
Born: 06 Dec 1953
Prev Call: KJ6RK (A)
Location: 33.602 N 111.888 W Maricopa County
Heading: 228 deg, 544 miles, 877 km
Email: aa7bq@qrz.com
Gif Image: aa7bq.gif

When you lookup callsigns and/or names, there is a new box
which you can input a zip code into. The system will then
generate a beam heading from the zip code which was entered.

In addition to our 1,000,000 callsign database, we now have the
worlds largest collection of amateur radio email addresses with
over 45,000 hams now listed. Also, we now have over 800 digital
QSL card images (.gif files) online.

Stop by and visit QRZ at:

http://www.qrz.com

Really Blake?????????

Please, do tell, I have NO IDEA what you are talking about. How DID I "singlehandedly" tear up other ham repeaters in the Portland area??

What repeaters where these?
When did I do it?
How did I do it?

I have been involved in catching jammers in Portland. But I can not think of any time where I was apologizing & trying to explain.

I guess I am giving you the "put up or shut" routine, like I did when you said you had checked me out with a local 2 way shop about my professional career and you didn't know the name of the shop or person you talked to.

By goom, you're right! I did it the hard way - I noticed Ken Harker had capitalized a V in the middle of one of his sentences. I assumed this was "I" (what other single letter do we capitalize?) and translated (rotated) the alphabet accordingly. Everything fell out nicely from there.

After deciphering "If you can read this, you really ought to get out more," I decided the effort greatly outweighed the rewards!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 AUGUST AND FORECAST FOR 26 AUGUST - 28 AUGUST

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 24 Aug
Daily Proton Fluence >1 MeV: 2.9E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.5E+06 (normal)
X-ray background: B1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Aug 27 Aug 28 Aug
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Aug: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 24 Aug
Learmonth 16 3334 3333
Fredericksburg 15 12
Planetary 16 8

Observed Kp for 24 Aug: 2232 1223

2B. MAGNETIC FORECAST
Date Ap Conditions
26 Aug 18 Unsettled to active
27 Aug 20 Active
28 Aug 20 Active
COMMENT: Active levels expected next three days due to coronal
hole.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
25 Aug Normal Normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
26 Aug Normal Fair Poor
27 Aug Normal Fair Poor
28 Aug Normal Fair Poor
COMMENT: High latitudes may experience degraded HF comms over
next three days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
25 Aug 12

Observed Australian Regional MUFs:
near predicted monthly values at all sites. No data
after 0800 UT.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
26 Aug 10 near predicted monthly values
27 Aug 10 near predicted monthly values
28 Aug 0 about 15% below predicted monthly values
COMMENT: Southern Region: Degraded HF comms quality is expected
for next three days, especially during local night. Depressed
conditions may be experienced on 28 August. Northern region communicators
are not expected to be significantly effected by current activity.

I agree. it's probably one of the largest problems that all response agencies face.

Here in Manitoba, Canada, alll provincial response organizations can tie into a frequency called the Universal Manitoba Emergency Frequency. This used to be an old Fire Commisioners Office frequency that was absconded with in order to ais in mutual aid response and larger multiple agency response to disasters etc.

Although the police in and around the rural town are usually the RCMP, all police agencies have access to a 'local' simplex frequency for inter-agency comms.

This system seems to work very well, with one exception. The city of Winnipeg, the largest in the province (620,000+) uses exclusively UHF system. There is concern that this poses undue stress whrn the city services are asked to respond for mutual aid. The only service in town that has access to any provincial VHF frequesncy is the ambulance service which only has access to a remote base station used commenly for notifying the city when an out of town unit is comming in for an emergency or routine transfer.

The city and the province is still trying to force a move to trunking, but in our area, this is very expensive alternative especially for the rural services. The debate has not closed on this one yet. We are trying to get them to see that moving to trunking may benefit the city services but will have a very negative impact on the rural communities, mostly in cost recovery.

If anyone has any input as to this problem, I would appreciate hearing from you. Please E-mail 'rewillis@fox.nstn.ca'

Have you tried a crossband repeater setup? In and out on both "sides" of
the problem. It would be assumed the usual Manitoba communications
service can be "heard" sufficiently far enough away so that most
conditions would be covered. Or for that matter a crafted plan of
multiple crossband systems that would cover the entire RF reception area.
Without knowing the topography or the coverage area it is kind of hard to
be more specific.

During the annual Baker to Las Vegas police charity run amateur radio
operators setup temporary systems that provide complete radio coverage
from downtown Las Vegas extending 150 miles into the California desert by
using a mixture of crossband repeater facilities.

>most cases, a dispatcher from agency A will call Agency B..Sometimes, a
>helicopter will come up on the frequency used by the other agency.

Again, NATIONWIDE, those frequencies have already been allocated, just
underused.

>newsgroups.

Bull. John, this is just more of your foolish attempts to convulate
the facts.

I have not posted in the HAM radio newsgroups in months, if not a
year. I have never spammed into any of them.

I simply posted a message about a rather famous gaff you made one day
with your postings, when you posted a rather embarressing episode you
had when you tore up some repeater equipment, that you had been
accused of not being competent enough to handle.

I never made any inference otherwise, and if you take other inference,
that would be YOUR mistake.

If need be, I could post it here for all to interpet any way they
want, I kept a copy.

Rather not do that, but continue the thread with your wild
accusations, and I will.

Have a nice day, and E-Mail me if you wish. Be more than happy to
hear from you!

SB DX @ WW $OPDX.268
Ohio/Penn DX Bulletin No. 268

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 268
BID: $OPDX.268
August 26, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB4ZNH, N5OGP, NL7TB, W7KCN, 5X1T/ON6TT, DF4RD, DL9GOA & the DX News Letter, EA6BH, G4BUE & the DX News Sheet, LU1DZ, PY7AB, and Franz Heinz following DX information.

3C1, EQUATORIAL GUINEA. Teo, EA6BH, announced he will be active from Cogo, October 16-22nd, as 3C1DX. His suggested frequencies are: CW - 3005, 7005, 14005, 21005 and 28005 kHz; SSB - 80/40 meters unknown at this time, 14195, 21195 and 28495 kHz. He stated that he will try to be active on the WARC bands, and if he has time he will operate RTTY on 14088 kHz. QSL via EA6BH.

5X, UGANDA. Peter, 5X1T, has been barely active as his family was on visit during July and August. Beginning September 7th, Peter will be back on the air full speed. 9U5CW is shipping Peter's low band vertical back, so we can expect 5X on 80 and 160 meters again. Peter is leaving Uganda on December 1st for 3 months for the Heard Island expedition.

8Q, MALDIVES. Andy, G4VPM, will be here September 8-22th and will be active as 8Q7AS. His station operations will be limited to QRP only with an Argonaut 535 and R7 antenna. QSL to CBA.

9M6, EAST MALAYSIA. The DXNS reports Saty, JE1JKL, has a contest shack on Labuan Island where he is regularly active as 9M6NA. He plans to be active in the CQWW CW Contest 80 meters (November 23-24th).
QSL to CBA.

9U, BURUNDI. Alfredo, 9U5CW, has informed Peter, 5X1T/ON6TT, that due to security precautions, he decided to temporarily suspend his ham activity. The situation in Burundi after the coup and during the economic embargo is not clear and far from safe. Alfredo sends his regards to all.

D2, ANGOLA. Birgitta, SM0FIB, now active as D2FIB will continue to be active until September 13th. This YL can also be found daily on 20/15 meters SSB. Check 21226 kHz around 1245z and 14252 or 14265 kHz starting around 1915z. It has also been reported that she checks into the YL net on 14243kHz at 1700z Thursdays and is active most evenings at 1900z on 14295kHz looking for SM stations. QSL to CBA.

E3, ERITREA. Many have been waiting and wondering why an operation has not taken place from here. Carl Henson, WB4ZNH, who had the first valid operation from E3, informed everyone this week: "I travelled to Eritrea last October assuming I would have no trouble operating there. Bad move. Even though Martha and I were the first to operate from Eritrea after the revolution, we were denied permission. The official reason was that Eritrea is in the process of creating new Amateur Radio Rules. At that time, the head of the Dept. was in Norway, studying Norway's Amateur Radio Rules. I phone Asmara day before yesterday (August 20th) and received the same answer as nearly a year ago."

LU6Z SOUTH ORKNEY QSL NEWS. Alberto, LU1DZ. states: "As you know, during the last Antartic summer two operators from our Argentine CW Group, Hector, LU6UO, and Ernie, LU1ZPF, made more than 23,000 QSOs mainly in CW from the South Orkney Island." You can read the complete story with some photos in the last "The DX Magazine" issue published in USA by VP2ML. Raul, LU6EF is the QSL Manager and he has sent more than 500 direct and bureau QSLs. You can use the InterNet address "URANITO@IMPSAT1.COM.AR" to inquire about some problems in receiving your QSL cards for all GACW DXpeditions and DX operations as follows:
1979 - LU7X Staten Island
1982 - L8DX Staten Island
1983 - LU3ZI South Shetland Island
All operations of LU6UO/Z, and LU5EVB/Z from South Atlantic and Antartic Islands.
The QSL Manager and GACW address is: GACW, Box 9, 1875 - Wilde, Buenos Aires, Argentina.

SPECIAL EVENT. The ADXB-OE radio club, a member in the AGDX, will be active on HF and VHF with the special callsign OEM1XBC from Friday, September 13th, 0800z until Saturday, September 14th, 2000z. Suggested frequencies are: SSB - 28520, 21220, 14220, 7060 and 3770 Khz or CW - 20 kHz at the beginning of the bands. The organizer of this event is Wolfgang Heinz, OE1WEU. The use of this special prefix M stands for "MILLENIUM", which means the 1000 year anniversary of Austria. QSL route for a special QSL: ADXB-OE, P.O.Box 1000, A-1081 Vienna, Austria; or to the organizer CBA.

USI ALERTS AND NEWS! Results and story of the NL7TB Barren Island (AK) DXpedition can be found on the World-Wide WEB: http//ww.owt.com/usislands/ and click on "USI other". Those who have begun chasing USIs, here are a few stations that will be active:

The Sonoma County ARC will activate Alcatraz Island (CA-new) on September 29th (no times or callsign was given). OPDX will try to keep you updated on this operation.

Look for Ken, KF8BC, from Island Park (OH-new) August 31st around 1200z. Ken will be on 14.260 kHz +/-.

Look for Pat, N0NYG, from Credit Island (IA-001R) on Monday, August 26th, starting around 1900z. QSL w/SASE to N0NYG.

Look for John, NL7TB/m, from Clover Island (WA-52R) August 31st, starting at 1700z.

VS9AJM QSL CARDS. If you have been waiting 16 years for this QSL card here is a chance to receive one. John, W7KCN, has obtained the QSLs and the tattered, water-logged record of QSOs for VS9AJM. An interesting story about this operation can be found in "The DX Magazine" March/April 1996 issue.

W4D (SPECIAL EVENT STATION). W4D will be activated October 1st, from Walt Disney Magic Kingdom Park (Florida) to celebrate the 25th anniversary of the park. This will be the first amateur radio station to be active from the park. Activity will be on CW (40 and 15 meters) and on SSB (80 and 20 meters). QSL via KD4FQT.

ZG2, GIBRALTAR. The DXNL reports that once again the prefix ZG2 may be used in Gibraltar this year from September 3-10th. Reason for this special prefix is to celebrate a national holiday in ZB2-land.

ZV2, COMPRIDA ISLAND (BRAZIL). This Brazilian Island has an IOTA of SA-024 (or Diploma Ilhas Brasileiras Award, DIB-21) and is located in the Sao Paulo State West Group. A DXpedition will take place here October 24-27th. A special callsign will be used, ZV2EPA. Look for activity on the IOTA frequencies. QSL via PY2YW (CBA) or bureau.

ZV5, SAO FRANCISCO ISLAND (BRAZIL). By the time you read this, ZV5AVM (CW) and PR5L (SSB) will be active until September 1st. This island has an IOTA of SA-027 and is located in the Santa Catarina Island Group. Suggested frequencies are: SSB - 3760, 7060, 14260, 21260, 28460 kHz and CW 3510, 7010, 14010, 21010 and 28010 kHz. QSL via PP5LL.

1996 OKLAHOMA DX ASSOCIATION DX BANQUET. The Oklahoma DX Association announces its 1996 DX Banquet featuring presentations by globe-trotting DXpeditioner Vince Thompson, K5VT, and Bill Kennamer, K5FUV, Manager of the ARRL's DXCC Program. Vince will present a color slide collage of his most recent operations and Bill will discuss the DXCC Program of the future. This year's event will take place on Saturday, November 9, 1996, at the River Oaks Golf Club, located just east of Edmond, OK (2 miles east of Interstate 35 on Hefner Road, between Sooner Rd. and Air Depot Rd.). For the latest banquet details check out OKDXA WWW site at http://www.pcok.com/~n5ogp/okdxa/ ADDED NOTE: The complete announcement will be sent to all OPDX InterNet subscribers as an extra bulletin.

It would appear that the GMRS repeater would have some problems then.
If a low power FRS xmitter (462...), 1/2 mile from a site and 5MHZ removed
from the input of a repeater (467...) could cause problems then the BPBR cans
of the repeater either aren't tuned correctly, or don't have enough rejection.
There may also be signal leakage from poor connections. Anyway, if the low
power xmitter, 5MHz removed, can cause problems to the repeater, then the
repeater is probably faulty.

>> to sign your name and callsign.

>HOORAY!!! you figured out that it was me!!!!! Gee, that was REAL TOUGH
>since I ALWAYS sign my name & call to my messages.

I've got about 10 of your posts from .misc with no name nor callsign. That
includes the rather filty one you sent regarding Burt:

>Yea, I sent the message to Burt (K1OIK) calling him "dumb". He IS dumb.

You also anonymously called him a P**** and even included F***. No name,
no call, and a phoney address.

>I never denied it was me or even TRIED to hide it. You are a fool.

Oh, you just conveniently "forgot" to sign it and provide a valid address.
Why don't you just use anon.penet.fi to remove all possible clues as to
your identity and address?

>Go away

You're the equivalent of a rptr jammer, John. And you didn't even sign
the post you just sent!

If you stack then one on top of the other your pattern from side to
side will stay the same & from top to bottom will be narrower. If you
stack them side by side on a non conductive cross boom your azimuth
pattern will be narrower & your elevation pattern will stay the same.

You apparently didn't read my post very carefully Jim. I fail to see
where I berated anyone! I simply pointed out that if you make it
clear to the other station that you don't have QSL's, they should be
prepared to make up a QSL with the pertinate QSO information if for
some reason they need to confirm the QSO. This should be mailed with
an addressed return envelope and postage. All you have to do is sign
the QSL to confirm the QSO. Can't believe this is asking to much.
Like I said, the QSL is the final courtesy.

The Xerox Amateur Radio (XAR) club WD6CZH will be running the "Ton O'
Radios" special event station this weekend. Our goal is to work over
2,000 pounds of radios. The exchange is your callsign and the weight of
the transmitter and receiver (or transceiver) used to make the contact.

Time: 1600-2400 UTC
Date: 31-Aug-96
Freq: General portions of the 40M, 20M, and 15M bands
Novice portion of 10M band
WD6CZH repeater (near LAX) 449.325- 114.8PL

For a certificate, send a 9x12 inch SASE to XAR, 6940 Bacarro St., Long
Beach, CA 90815-4805
--MIME Multi-part separator--

Dear All

I have just finished a major programme of refurbishment work to my website which greatly improves the appearance and will help you navigate round the 120+ pages.

http://www.ibmpcug.co.uk/~g4sgi/

Subjects include:

SWL working aids covering: Foreign Language Recognition, Propagation, Bandplan, Modulation. MS-Windows help file version available for download.

Demo of FREE PC-MONITOR DOS software for the FRG8800 and FRG9600

Information and demo of MUFsight MS-Windows propagation predicition software implementing the MINIMUF algorithm

Information and demo of MS-Windows control software for the Yaesu FRG-100 and Icom R-7100

Information and demos of leading AOR control software (including details of forthcoming Data Master software for the AR7030/AR3030)

Loads of links to Broadcast stations, radio dealers, personal pages and other www resources on the Internet

Feel free to take a look and let me know what you think.

Simon

The FRS also has 7 channels in the 467 MHz range. But even knowing
this, should they have interference problems, it would appear that the
repeater needs a bit of work.

(Reply to original poster, not Tim)

Get real. I just got my 1997 RS catalog. It has an FRS radio mabe by
Motorola for $179.99 on page 58. Besides that, it would be an illegal
mode of operation. One-way traffic is for voice paging or calling, not
for monitoring. I'm sure a device like that would never pass
type-certification for FRS. All baby monitors in the new RS catalog
are all 49MHz. Where in the hell are you getting your information?

I've had a TS-440S/AT (bought used) for about a month now, and I just noticed the antenna tuner can't find a match at 25.500.00 MHz or above, even into a 50 ohm dummy load. Relays click, motors whir, but the SWR never gets below about 2:1, so the thing just keeps trying until I turn it off. At 25.499.99 and below, it finds a match.

Anyone have any idea what's going on here?

Thanks,
Steve N8KWV

Amplitude Compandered Single Sideband (ACSS) received considerable
experimental status about 1976-7 when the topic made two covers of QST.
I still have some of the original equipment. It was promoted in the
amateur radio community primarily as a spectrum-saving new mode. A
better presentation would have been as a mode with a 12-15 db better
signal to noise improvement. Our amateur radio community might have
perked up a bit more. So, it sort of faded after the experiments.

But Tom Lott, of Hong Kong (?), who wrote the original algorithems and
base-band conversion circuits became disenchanted with the amateur radio
experimental scene, I gathered, and sold the concept to the Chinese
government to use as their government radio system. I lost track of Tom
after that.

Also, about that time E. F. Johnson acquired some rights to produce a radio that their marketing department decided to dub amplitude compandered single sideband and introduced a new concept for business band VHF radio, using repeaters (or translators). They were advertised on the basis of a system that would double the range of existing FM repeater systems using the same frequency and tower height. Again, another marketing fault.

When the system would not talk any farther than regular FM, albeit with a better signal to noise radio at the radio horizion, the system flopped big time.

So it appeared that a new technology, a really desirable technical radio communications mode using digital technology failed due to non technical reasons. It happens; no doubt you can think of other technical systems that were displaced or never got off the ground due to non technical reasons.

My recollection may not be entirely complete and perhaps someone else closer to the manufacturing or engineering aspects of the mode could contribute some interesting comments. This is a wheel that does not need to be reinvented, just pulled out of the barn and dusted off! One of the technical problems in 1977 was the lack of digital LSIC that were able to survive the r.f. environment and avoid RFI.

<zut@cais.com> wrote:

>In addition, most of the questions are phrased in a manner that have been
>heavily criticized as being prejudicial and biased toward supporting
>eliminating the international HF Morse code requirement.

But after reading the questions one is left wondering how such criticism
would have any merit. I would say the authors of the survey had been
paying attention, and were able to very suscinctly state the issues.
They allow the respondent to either agree or disagree with statements
such as the following"

"The Morse code is still important because it helps amateurs to
communicate across language barriers".

"The Morse code requirement helps ensure that radio amateurs are
disciplined operators."

"For the forseeable future, it is important to retain the Morse code
requirement in the international regulations."

"On Februrary 14, 1991, the FCC eliminated the Morse code requirement for
a Technician license for operation above 30 MHz. What is your opinion of
this change?" [rate poor to excellent]

"If Morse code requirements for HF privileges were to be reduced or
eliminated, would you favor adding something to the examinations to take
their place?"

"In your opinion, should Morse code ability be a factor in earning
privileges to use modes other than Morse code?"

The only thing that is obvious from the survey Tony, is that if support
exists for reducing or eliminating the code requirement, the ARRL
needs to know how the membership feels the change should be implimented.
It is most expediant and prudent to deal with these issues in the same
survey. The ARRL is asking the tough questions here Tony. They strike
right to the roots of the debate going on here in rrap. I believe they
are worded fairly - and I think we'll know from the results, how the
respondents feel about the issue.

By the way, it appears that everyone may participate in this survey. The
only people I know of who have received the "random" survey so far, are CW
operators - truth. The results in such a case would certainly be slanted.

Perhaps you wouldn't mind citing some examples of how the ARRL survey in Sept. QST is slanted against code?

Hi Fred, according to Ed Hare on "Ham Radio and Moore" :-) either the
FCC or ARRL will be publishing a worksheet/checklist that will take about
an hour to do, and will show whether one is safe, unsafe, or borderline.

Hi,
as far as LCD modules go, they require a contrast control to adjust
for the angle of view. I can't be much help for your scanner other
than point you in this direction. Inside the unit will either be a VR
(Variable Risistor) or a fixed resistor(Probably surface mount) that
sets the contrast. You could retrofit a Potentiometer for external
contrast control or change the fixed setting. If you could get a
sqematic of the radio you should be able to determine the components.

Good Luck

Motron, Inc. of Eugene, Oregon sells a card that plugs into a PC that
will fingerprint radio transmissions for just this purpose ($699?)

They also make very nice DTMF decoders! THey advertise in Popular
Communications and Monitoring Times, if not other mags.

ACSB (new acronym, same system) was resurrected in the mid 80's by Stephens Engineering Associates (SEA), a manufacturer of radio equipment (known primarily for their marine band stuff).

I don't know what happened to it, just that they were working on it in the 80's!

The dates of license on the QRZ data base are the the CURRENT license
period. They do not have historical data (when FIRST licensed) as far
as I have been able to find (CD ROM or Web Site).

I have been a Tech Plus since 1973, but QRZ only lists February of
this year (or whatever the date is) when I RENEWED and has no
indication of length of term.

It is strange, it has my birthday, but not my Amatuer License
anniversary date!

Hi, Rick -

I see you've already got the answers to your question (s), but heck, if I were you, I'd just hang for a while. If what I've been seeing here is any indication of what's to come, Hey, you're in high cotton.

A lot of these guys seem to want nothing more than to toss all this silly testing nonsense out the window. Testing's a nuisance, don't you see, cause most of it, you never use anyway. It's just an unfair barrier to a lot of really motivated and super sophisticated folks who want to access to HF, but can't afford a steam-driven spark gap transmitter.

So my advice is, chill out. Wait some, and pretty soon, I bet you'll be able to pick your own callsign, and just light off that rig, zoom on down to HF, and ratchet jaw all you want.

Breaker, Breaker!

Dave Potter/KC5UDZ

: shot.

All of the VHF contesters, and small signal people I know use
horizontal polarization.

The 2m ssb calling frequency is 144.2, with most activity centered
around it. Since almost all 2m ssb signals are ground wave, you need to
keep the antennas horizontaly polarized. While VHF singnals bend
around the earth, and some are carried in "ducts" in the troposhere,
they don't bounce. Since they don't bounce, they stay horizontaly
polarized.

While there may be a technical reason for it, I expect the best reason
for stacking beams verticaly is cost. It is much easier and cheaper to
place one over the other instead of side by side, needing a LONG cross-bar.

73,

Geoff.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 AUGUST AND FORECAST FOR 27 AUGUST - 29 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 25 Aug
Daily Proton Fluence >1 MeV: 6.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 5.9E+06 (normal)
X-ray background: B1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Aug 28 Aug 29 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Aug: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 25 Aug
Learmonth 9 2332 2222
Fredericksburg 15 18
Planetary 15 15

Observed Kp for 25 Aug: 4344 3322

2B. MAGNETIC FORECAST
Date Ap Conditions
27 Aug 18 Unsettled to active
28 Aug 18 Unsettled to active
29 Aug 18 Unsettled to active
COMMENT: IPS Geomagnetic Warning 9 was issued on 26 August and
is current for interval 26-30 August. Active levels did not continue
as expected. However, active levels are still expected next three
days due to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
26 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
27 Aug Normal Fair Poor
28 Aug Normal Fair Poor
29 Aug Normal Fair Poor
COMMENT: Geomagnetic activity did not continue at active levels
as expected, and HF comms conditions remained fair to good. However,
active levels are still expected over the next two days due to
a solar coronal hole. High latitude HF comms may be degraded over
the next two days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
26 Aug 17

Observed Australian Regional MUFs:
near predicted monthly values at all sites.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
27 Aug 10 near predicted monthly values
28 Aug 0 near predicted monthly values/depressed 10 to
15%
29 Aug 0 near predicted monthly values/depressed 10 to
15%
COMMENT: HF conditions remained good during local day yesterday,
however, degraded HF comms quality is expected during local night
hours over next two days. Depressed conditions may be experienced
on 28 August.

1675. New Comprehensive Global MUF Predictions

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-26 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <4vtcmg$89k@holly.cc.uleth.ca>
Source record: 218238
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

COMPREHENSIVE GLOBAL MAXIMUM USABLE FREQUENCY PREDICTIONS

The Solar Terrestrial Dispatch (STD) has updated its large database of predicted Maximum Usable Frequencies (MUFs) and related parameters from 18 August to 30 September 1996. The database consists of results determined through numerical ionospheric ray-tracing techniques and is (to our knowledge) the most comprehensive database of predicted MUFs in the world.

Over 1.2 million MUF-related parameters were computed using a high-speed DEC OSF-based computer system. Over 285 hours of continuous CPU time were required to generate these rigorously ray-traced MUF results. Equivalent computations on the fastest Pentium would have required close to a month of continuous calculations. The database covers 7 date intervals and includes the following MUF related statistics:

* Predicted 24-Hour Maximum Usable Frequency for the F2-layer.
* Predicted 24-Hour E-Layer Maximum Usable Frequency.
* Predicted Frequency of Optimum Transmission (FOT).
* The 24-Hour Average F2 and E-Layer MUF (a secondary FOT value).
* The 24-hour angle of elevation transmitters should use to reach the targetted receiver at the predicted MUF.

Each of these parameters include predicted effects of geomagnetic and solar activity.

The database provides sufficient information to let you easily determine what times of day, frequencies and transmission elevation angles to use to reach regions around the world. It also tells you whether your signal is going to be dominated by E-layer reflections, F-layer reflections or whether it will penetrate the ionosphere entirely and be lost to space. It is ideal for signal planning or for anyone interested in determining predicted optimum transmission or reception frequencies.

A simple but effective computer program can be included (it must be used to read the database). It lets you graphically select the desired transmitter and receiver with your computers mouse. After you specify the date interval for the prediction, it retrieves the appropriate predicted information from the database and graphically displays the results on your computer screen. The software requires an IBM or compatible computer system with VGA graphics and at least 200K of free conventional memory. With the database and software combined, about 7.5 MB of free hard-disk space will be consumed. The software is a DOS based application but WILL run under Windows 3.1 or Windows 95.

You will only need to purchase the software once. It can be repeatedly used on all future prediction database releases.

The available transmitters and receivers are listed below:

British Columbia, Alberta, Saskatchewan, Manitoba, Western Ontario, Eastern Ontario, Western Quebec, Eastern Quebec, Labrador, Newfoundland, Nova Scotia, Alaska, Northwest U.S. Coast, Southwest U.S. Coast, Northwest U.S., Westcentral U.S., Southwest U.S., Northcentral U.S., Central U.S., Southcentral U.S., Northeast U.S., Eastcentral U.S., Southeast U.S., Northeast U.S. Coast, Eastcentral U.S. Coast, Southeast U.S. Coast, Mexico, Spain, United Kingdom, France, Northcentral Europe, Southcentral Europe, Northeast Europe, Eastcentral Europe, Southeast Europe, Norway, Finland, Israel, Japan, Southeastern Australia, New Zealand, and Hawaii.

NEW transmitter/receiver locations available with this set of predictions include:

Northern South America, Northwestern South America, Brazil, Northwest Africa, Northeast Africa, Central Africa and South Africa.

You can determine predictions using any of the above locations as either transmitters or receivers.

We will be updating this prediction database regularly (monthly to bi-monthly) and will provide it only through the Internet via FTP or WWW.

To obtain the database and/or software, print out, fill out and postal mail or FAX the following form to us:

For *VHF* (which is what those antennas are), polarization does matter,
and the vast majority of SSB stations run horizontal polarization. At
HF, Faraday rotation in the ionosphere will render the polarization
arbitrary at the far end, so antenna polarization choice isn't as
important. It can cost you up to 30 db in cross polarization loss at
VHF, however.

>If you stack them vertically, then the vertical beam width will be
>narrowed. Stack them horizontally, and the horizontal beam width will
>be narrowed.

Yes. Normally stacking them vertically is better since there are few
birds with ham stations, IE reducing the elevation pattern profile
allows you to concentrate radiation that would normally be wasted,
at high angles, toward the horizon. Stacking them side by side reduces
the width of the lobe, which can be useful for separating distant
stations on similar bearings, but still allows too much power to be
wasted at high elevations where there are no stations.

For only 2 antennas, vertical stacking gives you the most benefit.
If you have 4 or more, then a box stack (an H frame) may give you a
greater benefit than stacking them all vertically. The stacking
distance can be between 1/2 and 2 wavelengths. Closer than
1/2-wavelength stacking causes too much interaction between the
yagis, and stacking distances greater than 2 wavelengths start
having too many minor lobes. There are modeling programs which
can tell you the "optimum" stacking distance for a particular

set of yagis, but in practice anything in the above range works
well enough.

Raalize you only gain a bit less than 3 db by stacking two antennas,
and only 3 db more when you stack two pairs (it's a geometric progression,
IE stacking 2 10 db antennas gives you an array with 13 db gain and
stacking 4 of them gives you an array with 16 db gain), so you have to
weigh the mechanical issues and cost issues of having a stacked array
versus a single antenna with a longer boom (which can have up to 19 db
of gain). Of course if you're already using a long boomer, then stacking
becomes the only practical option to get more gain.

Fortunately, other things are not equal. A constant carrier mode like
RTTY, FM, or AM gives an easy to calculate average exposure. SSB and
CW are harder to quantify. The average for SSB can vary from 1/8th
to 1/2 the peak output depending on voice characteristics, amount of
processing done, etc (it can even be worse than 1/2 with some over-
processed signals). CW has an average greater than 1/2 the peak
output due to the unequal lengths of the code elements, that is
dependent mainly on what is being spelled at the moment. Only if
what is being spelled contains all 'E's would the duty cycle reduce
to 1/2. For average spelling, it approaches 3/4. So an operator
who wants to stay within the exposure guidelines has a harder
time figuring out just what power level is approaching the limit
with a SSB or CW station than he does with a RTTY, FM, or AM station.
If he wants to be conservative, he's going to limit peak power to
about the same (within 3 db) as the continuous carrier modes would
use.

But a coherent demodulator has a 6 db (4x) advantage (minimum) over
a non-coherent one, so RTTY requires less power anyway for a given
channel condition (assuming optimum techniques are used for both
methods and data rates are the same). Other digital modes, IE PACTOR,
Clover, AMTOR, GTOR, etc, have a duty cycle which is less than that of
RTTY (due to the ARQ nature of the protocols), so they are even better
than CW since they also enjoy the 6 db improvement due to coherent
demodulation. GTOR, Clover, and PACTOR II also get a large "gain"
from FEC and can run even lower average power than just the coherent
demodulation allows. AMTOR gets a smaller, but still significant,

coding gain as well.

What this means is that some digital methods are sufficiently
better than CW that they should never need to run power levels
approaching the limits under conditions where a CW station
would need to approach the limits. That may seem contrary to
some people's experience, but that's just because they've
never experienced the performance a good digital code and
demodulator can offer. After you've seen one of these systems
give clean print on a signal you can't even hear, you start to
become a believer.

Most amateurs are using very suboptimal demodulators, and could
gain a large improvement in performance under poor channel conditions
by switching to better systems. And typically the switch would be
much more cost effective than buying an amplifier too. I've never
needed even 50 watts for a Clover contact for example. Often the
system turns the power down much lower than that. (It is regrettable
that the P-38 doesn't offer automatic power control like its more
expensive brother does, but you can still manually reduce power
when the link margin numbers are high.)

And of course, none of these systems have a pulse rate in the
5-15 pps range which has been linked (in vitro) to cellular
mutations considered indicators of carcinogenic activity when
seen while testing chemical agents and drugs, IE the FDA wouldn't
approve a drug which showed these sorts of cellular effects
in vitro. OOK Morse does have a pulse rate in that range. That
range also includes 7.62 Hz (corresponds to approximately 18 WPM
Morse), which has been shown to induce behavioral changes in animals
(both planaria and mice) in the lab. I wouldn't call it safer. (I
wouldn't necessarily call the risk level unacceptable, however,
in vitro and laboratory animal results don't always translate
directly to Man, but it is a cautionary flag being raised which
is absent from the other digital modes.)

Probably not *easy*, but what you have to do is change the
viewing angle of the display so that it is perpendicular to
your line of sight in its overhead mounting position. That
most likely means adapting the front panel to be semi-detached
from the scanner so you can tilt it down.

Doctors used to spray X-rays around with great abandon too, until they learned better. Supposedly qualified dermatologists used a series of X-ray treatments to treat acne in teenagers only 25 years ago. Many of those people are now fighting recurring bouts of skin cancer. (I have the E ticket on that one.) Just because doctors consider it routine does *not* mean it is safe or prudent.

>>show 1 in 4 women will suffer from that form of cancer. But let's please

We still use bloodletting, in the form of frequent blood donations, as a treatment for some conditions, for example as a method of controlling the blood concentration of the protein which causes gout. Doctors have gone back to using leeches too, for certain kinds of wounds. Sometimes things that seem crazy, aren't, and sometimes things that seem harmless, aren't. Prudence says we don't casually do things whose risks we don't understand.

1681. ARRL WRC-99 Survey

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-26 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <4vsg40$fh8@orion.aoc.nrao.edu>
Source record: 218244
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I am an ARRL member and I have sent in my questionnaire.

I believe both the questionnaire and the methodology of the survey, as I understand it, are indeed appropriate.

The survey does cover only one of the issues to be discussed at WRC-99, but the one it covers is the most divisive and intensely-debated; thus, a survey on that question alone is useful and appropriate.

Any useful survey on this topic (the Morse Code requirement) MUST include amateurs who are not ARRL members. Though ARRL members constitute only about one-fourth of licensed amateurs, the ARRL position most likely will be accepted by the FCC and State Department as representative of at least a majority of amateurs. The League has for years considered itself, and been considered by the FCC, as the voice of amateur radio on regulatory matters. In order to legitimately act as that voice, this survey must include non-members.

The issue of Morse testing will affect the whole of amateur radio, not just ARRL members. Many people on both sides of the issue feel that the decision made at WRC-99 will have a strong effect on the future of the amateur service. I feel that, by reaching out to solicit the opinions of all amateurs, not just members, the League has shown that it recognizes and accepts the responsibility of acting as a leadership organization and working for the benefit of the entire amateur service.

Dave Finley, N1IRZ

1682. Re: LEARN CODE FAST

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-26 00:00:00 UTC
From: jerryaero@aol.com
Message-ID: <4vtn7m$jtk@newsbf02.news.aol.com>
Source record: 218245

We have developed our own unique method of learning the code. Those who have used it swear by it and have gone on to get code speed up and get licenses. Here is some general information:

Here's some information about The Morse Code Video:

Name of Video: Code Crash

Running time: 36 minutes, 45 seconds.

Nature of video: A quick way to learn the Morse Code

Description: This tape consists of Jerome Mintz teaching two different children the entire Morse code in less than 20 minutes each. The technique consists of associating the shape of the letter with its sound, using a unique system created by Mintz. "Dah" and "dit" are used for long and short. For example, the four shorts for the letter H are associated with the four corners of the letter H. "E is the easiest letter. Just dit." For the letter B, think of the long line on the left for dah, and the three lines going out for three dits: Dah dit dit dit." "People usually think of M for mother. This M is dah dah." This is then reviewed and reinforced, and the numbers are also reviewed.

Here's a reprint about Code Crash from our newsletter:

CODE CRASH
One unusual project that we have been involved with has to do with teaching the Morse Code. Some homeschoolers who were interested in amateur radio discovered that I had developed a method of teaching the code in as little as 20 minutes. They asked me to put the process on tape, which I did. Then after successfully using it, they suggested that I contact Radio Shack, to see if they were interested. They are interested, but haven't reviewed the tape, yet. We've sent a few copies out, to a few people who found out about it. The following is a letter we recently received from someone on the GEnie Network.
"Jerry,
Just wanted to drop you a line to tell you that I have watched the tape you sent me and it is a big help. I had my son and daughter watch it too, they are 18 and 19 years old, and do not have any interest in learning code. After seeing half of the tape, they both knew code. It has been a big help to me too. I still have to build up some speed, but at least I can hear dahs and dits now and know what letter they are. Thanks for a job well done. It does work!!!!!
I'll keep you posted, I hope to go take the code test soon.
Rick Mace"
The following came in from a Prodigy Network subscriber:

"Hi Jerry,
Really enjoyed the video. We dropped everything when it came in the mail and watched it. It really works! We have all learned the code and are sending messages to each other through the day. Even my three year old walks around saying "did dit dah dit!"
Sheila Hunt, TX"

The cost is $20 plus $3 for postage.

:>Burt

Since you make it a point of going, shall we say, "Toe to Toe",
"Keyboard to Keyboard" [or whatever you would call it] with many Hams
Burt, seems that you already know that it is only required that the
FCC be able to contact you should they wish. I don't have the book in
front of me but it seems if a person has changed addresses but left a
forwarding address they can be reached through, this meets the
criteria as I believe the USPS will forward any government business to

it.

And if I'm not mistaken, you can find out if he has left a forwarding
address on file at the old postal address and it only costs 1 dollar.
But they can only give you the unexpired address. Surely there are a
few USPS people out there that can confirm it in this group for you if
you really would like to know. After you have the info and confirm
that there was no forwarding address left then your statement would be
correct, would it not?

>now a part of Article S25 of the ITU Regulations, you were not alone.
>
What's the matter? Afraid to find out that huge numbers of new, no-code
hams are staying away from the ARRL because they view it as representing
the minority who still want to force CW down their throats and consider
them (the no-coders) inferior hams?

Afraid that they'll resoundingly vote for eliminating the CW requirement
and that the FCC will see that the "party line" of the "voice of amateur
radio" has been bogus with respect to the CW requirement for some time?

I'm a member, by the way (and a with-code ham licensed continuously
since 1975)... although there have been MANY times when I've considered
NOT renewing for the very same reason.

Jerry AERO (jerryaero@aol.com) wrote:
: We have developed a method of teaching beginning Morse Code in less than a
: half hour, guaranteed!

: At the request of our readers we have made a video which teaches the code
: by using an association method. We have never advertised this tape, but we
: have sold hundreds by word of mouth. Said one user: We were amazed and
: impressed with ourselves that we suddenly knew the whole More Code in less
: than an hour!"

This may be ok, if the association method is to associate the letter to
the sound. If it associates to a picture, shape or item, then it will
cause problems later - as double translation will be required.

: The tape is only $20, plus $3 postage. It is NOT for increasing speed,
: only for learning beginning code.

I hope it uses the Farnsworth method, at about 15 wpm.

>JOHN
Here in Wisconsin there are frequencies in place that are common
state-wide for fire, EMS, and law enforcement.

As jurisdictions upgrade, they will usually purchase radios capable of
handleing all of these common frequencies. The additional cost of 48
channels vs 16 on a hand-held is nominal. Most jurisdictions in Wi
are still on VHF or UHF, and the mutual aid freqs are as well.

Mark

The truth as I perceive it to be.
Your perception will be different.

GeorgeS (pip@shore.net) wrote:

: My guess is ROT13 is short for ROTATE 13. If you imagine the alphabet on a
: wheel, you would cipher the text by rotating the wheel 13 spaces

The reason for rot13 is not to encrypt a file to keep unwanted recipients
from seeing it. It's just a way someone can post something which can't
be read accidentally. Like posting a joke which someone might find
offensive to a humor group. If someone is just rifling thru the jokes
they won't be offended unless they deliberately decode the rot13.
Another use might be for a post which "spoils" or gives away the plot of
a book or movie.

Pse send any enquiries to the broadcast officer at PO Box 60
or to VK2JPA at VK2WI on 144.850 MHz.
Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 923 25TH AUGUST 1996

COLS COLUMN

I SOMETIMES WONDER AS I GET OLDER IF THIS WORLD WE LIVE IN IS
JUST A DREAM AND I WILL WAKE UP AND FIND MYSELF BACK IN THE
DAYS BEFORE THE NEW TECHNOLOGY ARRIVED. MOST OF US IN THE RTTY
FRATERNITY USE AS MANY OF THE DIGITAL MODES THAT WE CAN AFFORD.
AMTOR FEC AND ARQ, PACTOR, PACKET, YOU NAME IT AND WE HAVE IT.
I KEEP HAVING THIS SNEAKY FEELING THAT TOMORROW I WILL WAKE UP
AND FIND WE ARE STILL IN THE DAYS WHEN TELEX WAS STILL
MANUALLY CONNECTED. TELEX???...WHAT'S THAT???...

IT WAS A TELEPRINTER SYSTEM THAT MOST OF THE LARGER COMPANIES
SUBSCRIBED TO, IF YOU HAD A TELEX MACHINE YOU COULD BE
CONNECTED VIA TELECOM (PMG IN THE EARLIER DAYS) TO ANOTHER
SUBSCRIBER AND SEND A MESSAGE TO THEIR TELEX MACHINE. IT MAY
HAVE BEEN A SUPPLY ORDER, OR PERHAPS BOOKING ACCOMMODATION AT
A HOTEL. JUST LIKE TODAYS FAX SYSTEM.

I AM NOT SURE IF THE TELEX SYSTEM IS STILL IN OPERATION, SO I
WILL TALK ABOUT IT IN THE PAST TENSE. MY FIRST ENCOUNTER WITH
TELEX WAS IN 1950 AT A LARGE RAF COMMUNICATIONS CENTRE,

SOMEWHERE IN DARKEST ENGLAND. THOUSANDS OF MESSAGES, OR SIGNALS, AS WE CALLED THEM, PASSED THROUGH THE CENTRE EACH DAY, AND SOMETIMES A SIGNAL WOULD BE ADDRESSED TO A CIVILIAN ORGANISATION WHICH REQUIRED IT BEING FORWARDED VIA TELEX.

TO SEND A MESSAGE ON TELEX, ONE WOULD PICK UP THE PHONE AND ASK THE TELEPHONIST TO CONNECT TO THE REQUIRED NUMBER. THE PHONE CONNECTION COULD TAKE ANYTHING FROM STRAIGHTAWAY TO MAYBE HALF AN HOUR DEPENDING ON THE DISTANCE INVOLVED AND THE TELEPHONE TRAFFIC LOAD. ONCE IN CONTACT WITH THE CORRECT NUMBER, YOU ASKED THE PERSON ANSWERING TO SWITCH OVER TO TELEX. A LARGE, BLACK, PLASTIC SWITCH WAS THEN CLOSED. ONCE BOTH OPERATORS HAD DONE THIS YOU COULD TURN ON THE TELEPRINTER AND USING FIGURES D, GET THE ANSWER BACK CODE OF THE OTHER TELEX MACHINE AND SEND THE MESSAGE. I REMEMBER WE HAD TO REPEAT THE FIGURES D AT THE END OF THE MESSAGE TO CONFIRM THAT THE CONNECTION HAD BEEN MADE ALL THE TIME, AND WE HAD TO ASK FOR A QSL AND TIME.

A FEW YEARS LATER THE PMG INSTALLED A TELEX SWITCHBOARD AND TO MAKE A CONNECTION A TELEX OPERATOR REPEATEDLY PRESSED THE SPACEBAR, BUT NOT TOO QUICKLY. THIS CAUSED A LIGHT TO FLASH ON THE SWITCHBOARD AND THE OPERATOR PUSHED A JACKPLUG IN AND TRANSMITTED HIS ANSWER BACK CODE TO LET THE TELEX OPERATOR KNOW HE WAS THROUGH. THE TELEX OPERATOR THEN GAVE THE SWITCHBOARD THE NUMBER IN THE SAME WAY THAT EARLY PHONE CALLS WERE MADE.

WE THOUGHT THIS WAS SO MODERN. LITTLE DID I KNOW AT THE TIME THAT ON LEAVING THE RAF I WOULD BECOME ONE OF THE TELEX SWITCHBOARD OPERATORS, BUT THATS ANOTHER STORY.

IF ANYONE WOULD CARE TO CALL INTO MY PLACE AND PINCH ME RATHER SHARPLY, EITHER I WILL WAKE UP AND FIND ALL THIS NEW TECHNOLOGY HAS JUST BEEN A DREAM, OR, YES IT IS ALL TRUE AND I CAN CARRY ON USING ALL THESE NEW FANGLED DEVICES THAT I JUST LOVE. EXCUSE ME BUT I MUST GET BACK TO THE INTERNET, SEE YOU NEXT TIME.

N E W S F L A S H

JIM VK2BQS HAS JUST ADVISED HE HAS PROCESSED CONTEST LOG 75, WHICH MEANS WE HAVE AN INCREASE IN THE NUMBER OF LOGS RECEIVED OF 50 (FIFTY) PERCENT OVER LAST YEAR, AND WE STILL HAVE OVER A WEEK TO GO BEFORE THE CUT-OFF DATE.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(16 AUGUST - 22 AUGUST)

ISSUED ON 23 AUGUST 1996

SUMMARY
Date 16 17 18 19 20 21 22
10cm 68 68 67 68 69 70 73
A 14 15 6 7 8 5 (5 estimated)
T 5 7 7 1 0 5 5

SOLAR ACTIVITY WAS LOW ON 22ND AUGUST, AND VERY LOW FOR THE REMAINDER OF THE WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 18TH AND 21ST AUGUST; QUIET TO UNSETTLED 19TH, 20TH, AND 22ND; AND UNSETTLED TO ACTIVE 16TH AND 17TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES DURING LOCAL DAYLIGHT HOURS 16TH TO 18TH, AND 22ND AUGUST, WITH ENHANCEMENTS OF UP TO 30 PER CENT DURING LOCAL NIGHT. ON 19TH TO 21ST AUGUST, FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES. SOME SPREAD F WAS REPORTED ON 19TH AUGUST.

FORECAST (23 AUGUST - 29 AUGUST)

GEOMAGNETIC: QUIET UNTIL 26 AUGUST. UNSETTLES, WITH CHANCE OF ACTIVE PERIODS ON 27-28 AUGUST. QUIET TO UNSETTLED LEVELS EXPECTED 29 AUGUST.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES.

I guess it's all in the eyes of the beholder. As I read the
questions I could clearly see that they were an attempt
to force people to justify their support of CW on more than
just an emotional or (I did, so should you) basis.

Frankly, that's the position I and several others have
also noted with regard to ANY regulation. In the role
of geovernment regulation, any testing that is done to
obtain any license MUST be constantly examined for
the relavance in contemporary activity or the requirement
should be eliminated or otherwise changed to reflect
what is contemporary.

Mere use of CW by some percent of hams no longer
constitutes a valid reason to mandateall hams on
HF must learn that mode.

Wouldn't a typical case for an amateur set-up be one in which
the result is at least divided by two as a result of the typical
amateur QSO being a 2 way communication with an average
duty cycle being 50%?

Additionally, for general public exposure, it would seem that
most situations would result in even lower exposure levels
because of movement by the "public" through an area
as opposed to sitting in one place. Granted there may be
some exceptions to that, but I can't think of any at the
moment.

In another post, Clay N4AOX said:
> Hmmm, based on what you say, it seems that other thinkgs being equal a
>low duty cycle mode like Morse OOK CW would be provide a lower exposure

>attributes is more healthy than some of the newer fad modes. ;-)

That too would improve (i.e. leesen an otherwise high or excessive
value that might be generated by calculation). As Clay notes,
CW is not a continuous transmission, so a duty cycle for transmit
only can probably be fairly easy to calculate. On that same
basis, SSB transmissions do not contain the Peak levels
except at certain speech patterns, so some average value
or correction factor would be helpful when calculating SSB
averages.

Dave,

Well said ... I just hope that the "random" survey includes folks other
than just those who are "life members", QCWA, or Brass-Pounder's League
and 30WPM endorsement certificate holders.

I'm afraid that, based on past positions and performance on this issue I
have a very hard time beleiving that the ARRL truly wants to hear the
truth on this matter. I believe that the realize that they have to give
an appearance of fairness and even-handedness, but I'm also of the
opinion that, given half the chance, they'd just as soon stack the deck
in favor of retaining CW requirements and then tell the FCC "See, we
told you so last time, too."

I'd *really* like to be wrong on this one.

> I don't think the state of the art of noise cancellation mics
> has made this possible yet. :-)

We have someone regularly using a local repeater "motorcycle mobile"
and his audio is just fine. If i suspect that if you're mouth is an
inch or so from the mike, it'll win easily over the noise if it's
not to badly in the wind. I would bet one may even be able to
homebrew something, using ordinary headphones and a cheap electret
microphone available at Radio Shack. I removed one of the earphones
and made a switch that i can actuate with both hands on the wheel,
so it's both 'street legal' in California and reasonable safe to
operate. The project was written up in QST about the time I got my
license, and i'll either give an exact date or a write-up of my
version of the project upon request. The hard part is probably
making it rugged enough that it doesn't need aperiodic maintenance.

Hi all,

Can anyone recommend a brand of 70cm radio from any of the major
ham-radio manufacturers that is really suitable for 9600 baud packet? I
wonder if there are any PLL sets that are satisfactory?

Thanks & Cheers,

Tony vk2tjf

Nine stations surveyed is not anywhere near a statistically significant
sampling. Further, the findings were not used to provide any exemptions
for scenarios which did not exceed the regulation.

Most other services received exemptions for particular scenarios.
Amateur radio received none, except the 50 watt PEP output (no mention of
antennas config or EIRP) which is not technically sound.

The 9 station study is/was essentially useless.

You say ARRL represents only 1/4 of licensed amateurs. Actually, at least half, maybe more, of the "licensed hams" possess no equipment and are not on the air. They (pardon the cliche) couldn't care less. Of the hams who are active, on the air, mult-band and multi-mode, I would say that the overwhelming vast majority are ARRL members.

I've owned probably 40 different handheld scanners in the last five years and there is no doubt in my mind that none of the above is the correct answer.

If you can find a pro-43 at a reasonable price grab it. The later ones cannot be unblocked for cellular and I've never owned one of them so I can't tell you much about them but the earlier ones (don't ask me dates) have the best audio, intermod rejection, image rejection, and ergonomics of anything that I've ever used. I've always kept at least one even though I've bought and sold many.

Hello all

I am starting to plan for the first new equipment to be placed
in Ford Club Van.
Something that can be used on the road and maybe pulled
out and used in the new Ham Shack.
Planning my return to Ham Radio after 35 years.
Any suggestions will be appreciated.

I've been looking for information on e-mail,Internet addresses,
or Telephone numbers of all the Ham Type magazines. So
far all I have is QST. Libraries and local stores don't carry any.

Hope to hear from you and you...

73 john

A friend of mine is a radio amateur and he has got this transceiver
radio:
RTX mark ALINCO
ELECTRONICS INC. JAPAN
Portable VHF
model DJ180E

He has got two questions about this radio:
1) How can he modify his radio to extend the band from 144/146 MHz to
130/170 MHz?
2) Can he receive the "manual for use" of this radio? (A photocopy of
the manual is acceptable too!)

For details, please conctact me through my personal e-mail address.
Thank you very much!

Paolo Tealdi - Italy

Note of Interest.
Here in Vancouver BC Can, We are in the process of installing a regional
Wide area emergency radio system which should be up and running by the summer
of 1998.

The system chosen is to be an 800Mhz digital trunking system,
covering an area from Pemberton to Sechelt---Vancouver to BostonBar,
Continuing down to the Canadian/US border with a few coventional Vhf repeater
tie-ins for out of area units.
The system is to be used by all emergency agencies, RCMP\Vancouver City
Police and Fire units plus other municipality fire and emergency service
Units.
The Provincial ambulance sevice will also operate on this new system too.

Its about time that this system was put into place......

There's One thing I can't figure out, Is why there was'nt a mutual aide radio
system started back ten years ago with the advent of multi channel\frequency
synthisised Radios?
The US have had systems for mutual aide for years???????

For more information on this new system
check out the the city of Vancouvers home page
at http://www.city.vancouver.bc.ca

>
> Yup. Same logic.

Not quite. Deignan has conveniently side stepped the issue of mitigation of interference. With respect to learning the theory for the various modes of transmission, regardless of whether the individual home-brews a rig, or buys the latest from Ten-Tec, Icom or whatever. It doesn't matter whether one uses Pactor, SSB, SSTV or CW, the potential for interference is the same. However, the knowledge of the Morse code in no way contributes to satisfying the government, who administers the radio frequency spectrum for all users, that the individual has the requisite knowledge for operating an amateur station with due regard to the interference potential to other users in the radio frequency spectrum. In fact, Sohl's suggestion does indeed continue the same logic as to the presumption that amateurs are free to pursue their interests with little interference with the government. Just as the government does not require any of use to have digital, phone or SSTV capabilities, or equip our station to undertake certain investigations, i.e. EME, meteor scatter, etc., it only follows that the knowledge of Morse code should be optional regardless of the desired frequency of operation. Not only is it logical to abolish Morse code testing, it is also fair to do so.

In general the multi-mode units - like the Yaesu 736 and others from ICOM
work really well - they use a crystal for the base modulator - you "simply"
couple the TX into the crystal and you are done. They also generally don't
reprogram the synthesizer between tx and rx. There was a review of radios
for 9600 in QST earlier this year - Feb or March I think. Good luck, Dave.

>>

I cannot TYPE 1125 wpm. In fact, I can send CW faster than I can type!
I'm not even sure I can TALK 1125 wpm.

This is still a HOBBY ... only a HOBBY. It is what you want to put into
it, and the wonderful thing about it is that it is so diversified there
is something for everyone.

There are those who wish only to chat on 2 meter FM with HT's. Fine ...
there's a place for them and I enjoy their company. There are those who
wish to play around with technology ... fine, they have their places too.
I also enjoy reading about that aspect of the hobby.

Some of us (myself included) are DXers, contesters and VHF DXers/contesters who build their own VHF equipment. We have our places in the hobby, too.

The thing is that it is a communication hobby as well as a technology hobby. Live communication. I'm not trying to send a novel to the guy at the other end; I can do that on Internet. But considering my typing speed I don't need to send data at 2500 wpm or whatever; I just want to communicate with they other guy in real time and if I can send CW at 60 wpm, type at 45 wpm or talk at 300 wpm I'll still exchange ideas.

So for those who wish to see how many novels per hour they can send via CLOVER, well - have fun. I still enjoy reading about your results. But I still like those slower forms of communication, CW and speech. They are also fun in this hobby, to me at least. And to a few others ... I've had several one-hour CW and SSB ragchews recently.

Prices lowered:

Kenwood TS120S station; 80-10M SSB/CW rig (no WARC), 200W PEP input,
digital display, w/YK88C CW filter. Rig is in excellent condition.
Includes:

SP120 external speaker
MB100 mounting bracket
Generic hand mic
Owners and Service manuals

$300 plus shipping, for the whole station.

IC2SRA 2M HT; full 2M coverage + 29-905 MHz RX (includes cellular) w/ 2
2M ducks, 2 scanner ducks, BP84 1000 ma/hr pack, AC charger, leather
case, manual, and box.
$225, plus shipping

Please drop me a note if you're interested.

It is probably your coax. For freqs above 1 Ghz, you really need to
use Hardline. Anything less, is just too lossy. The best coax,
will work well for shorter runs. If you cut the length of coax in
half, you will also cut the loss in half.

Example;
(for 100' of coax)
Cable loss/db@1Ghz Percent Loss (approx.)
RG-58 22.0db 99.3%
9913 4.5db 64% (Belden)
LDF-4 2.34db 42% (Andrew)(Hardline)

Garry

Principles aren't of much account anyway, except at election time.

If the feds told you that jumping off a high bridge didn't hurt when
you hit the ground, would you jump Gary? I would hate to speculate.

Bullets and radios are very different critters, as I am sure you are
aware. This analogy is irrelevant. In RR, you know that one of the
chambers has a bullet in it, and, eventualy one WILL lose the game.
With radios Gary, there are no bullets, no blunt force trauma, no
observable means of harm what-so-ever at amateur levels, other than
possible rf burns. So, what part of prove it do you not understand?

How about a real study, huh? Get 100 volunteers from the amateur
community to be part of a LIFE LONG study. Lets use LIVE people this
time and see the effects throughout their lives, and see if there is
any direct relation between RF and illness. THEN, lets look at the
data and see if things need to be changed. Remember that dead people
are easy to study, but as we are all aware, they can't tell us much.

We can't assume that will be so over any given 6 minute period.
We have some long winded fellows out there. Some of them have
come to learn at least two Morse letters, "T O" for repeater
Time Out.:-)

But in general you're right. The normal give and take of
conversation should limit any individual transmission to just
a small fraction of six minutes. This would be especially true
in roundtable operation. There would be cases, though, where
the duty cycle would be well in excess of 50% for longer than
a 6 minute period, for example a station operating as net control
or a Dxpedition operator working a pile up. Those operators would
be transmitting far more frequently and have a higher average
transmission time in a given 6 minute period. AM and RTTY operators
also tend to be rather long winded, and anything of substance
sent in CW takes forever.

>Additionally, for general public exposure, it would seem that
>most situations would result in even lower exposure levels
>because of movement by the "public" through an area
>as opposed to sitting in one place. Granted there may be
>some exceptions to that, but I can't think of any at the
>moment.

How about the neighbor in the next apartment. This is really
the greatest concern because the permitted exposure is so much
less for that neighbor than it is for you as an operator. The

idea being that you've accepted the risk, IE given informed
consent, but the neighbor hasn't. Of course the averaging time
permitted is longer. If the neighbor is just on the other side
of the wall where you've tacked up your indoor antenna, you've
got a potential problem.

>In another post, Clay N4AOX said:
>> Hmmm, based on what you say, it seems that other thinkgs being equal a

>except at certain speech patterns, so some average value
>or correction factor would be helpful when calculating SSB
>averages.

Neither of these is easy to calculate. Depending on what words
are being spoken or spelled, the average could be above or below
50% of peak power. Crudely, we can assume a 3 db reduction
below peak power for the average value and not be too far off.
The limits are in a sense arbitrary, basically an informed
estimate of what level of risk is acceptable. We can play slightly
loose with that and probably not get into too much trouble.

Let me carry that thought forward a bit more. There is likely
no trigger threshold where we can say "above this figure lies
danger, below it lies no danger". More likely, the risk increases
fairly linearly between any two exposure values. The limit numbers
are a compromise between our need for a simple concrete standard
and the reality of exposure effects in a statistical universe.

We know without doubt that high exposures are harmful, and we can
assume that a zero exposure is not. Somewhere in between we have to
draw a line if we want to use RF at all. That line has gotten lower
over the years as we've learned more about the hazards of RF exposure.

Our perception and tolerance of risk has changed over the years as well.
As the population's lifespan expectations have increased, we've become
more conscious of risks that may not have a visible impact for decades.
And an older population is less likely to believe itself immortal, as
a younger one so often does. So we've become less tolerant of things like
secondhand smoke, RF exposure, or reckless behaviors like drunk driving.

We need to keep a bit of perspective here. It is far more likely that
we will be injured in a traffic accident than we will be by secondhand
smoke or by RF exposure slightly above some standard number. Most people

probably assume a greater risk simply getting out of bed and stepping into the shower than they do by operating their amateur equipment. (Falls in the bathroom are the leading cause of injury in the home.)

Still, having a standard is useful, and the particular one selected by the FCC seems quite reasonable. We can easily stay within it without severe adverse effects on our operations. There's no good reason to suffer excess exposures when the steps required not to do so are easily within our reach and which will have such a minimal effect on our activities. Most of us routinely run far more power than we need to run. And many of us use methods much less efficient than other methods we could be using to accomplish the same communications task. Obeying the standard may cause some of us to re-evaluate our operating habits, and that's probably a good thing.

>Ken Bessler KG0WX, KBOJ-6870, "Metro" (ch 1), Wichita, KS

>If I click my heels three times do I go across the street?

One thing that I have never understood...have you ever noticed that the
hams who bellyache about CB'ers the loudest seem to be
"YE OLDE FAHRTZ?" That's right, those same "ancient operators" who are
also complaining the loudest about the no-code techs and begging the ARRL
to maintain their tough stance against reducing or eliminating the Morse
code requirements for HF access.

They tell the CB'ers to "get legal, get a ham ticket!" Then, when they
do, they tell them that they're not "real hams" because they refuse to
waste time learning an antiquated communications system of dits and dahs.

Go figure!

>Tony vk2tjf

Hi Tony.

I run a Kenwood 451a on 9.6k 24 hours a day. Some will claim this radio
is inadequate for 9.6k operation, and I have not had it on any test equipment,
but it runs flawlesly with my Kantronics 9612 on both, the 9.6k repeater, and
keyboard-to-keyboard.

The only downside is I have to run a 250ms TXDELAY thru the repeater, as the
PLL (of course) "sweeps" a little when switching from the TX freq, to the RX
freq...and vice versa.

Other than that...I like it very much, and it works well.

Take care.

1744. Updated WWW Amateur Exam Practice page

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-27 00:00:00 UTC
From: Simon Twigger <simont@post.its.mcw.edu>
Message-ID: <322360E0.27EA@post.its.mcw.edu>
Source record: 218142

Hi there,

I have a collection of WWW pages designed to help people study for their US amateur radio licences. It is possible to take sample exams for every class (Novice - Extra) and all figures are provided. The graded exams also contain a graphical indication of how you performed in each subelement to simplify identification of those areas which need further work.
I have recently upgraded the facilities to allow personal statistics to be maintained. Once you have registered a username, your results will be saved to your own personal file. This then allows you to review your performance, showing you how you have been doing in each subelement and even each question. Your results can also be used to tailor the generated exams to ensure you get asked every question in the pool and extra practice at those you get wrong (Normally the questions are selected at random from the appropriate subelement etc.)
As well as the personal statistics, there are overall statistics for each exam, showing the number taken, and the pass rate for each examination. So far, the new extra exam is proving to be somewhat tougher than the old version, and the advanced is just as much of a pain as always!

In addition to the on-line exams, you can have generated exams sent to you via email for later use. This is possible either by a WWW based form interface, or automatically by sending email to:

exams@eeyore.biochem.mcw.edu

for example, if you wanted a sample novice exam, put the line:

generate novice

as the body of the email. If you want more than one exam sent to you, include more 'generate novice' lines as required. To receive the other exams, replace 'novice' with technician, general, advanced or extra.

The WWW page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

Over 9,000 exams have been completed since the site opened in February 96 - many thanks to all the people who have sent me comments and suggestions, please keep sending them in, they are most appreciated.

Hi, everyone! I have a Uniden HR2600 10M rig available for sale/
trade. It is in excellent condition, and includes the mic, manual,
power cord, mounting bracket, and box. It does not have the
chipswitch mod installed. $125, firm, including shipping.

Items of interest for a trade:

Older Kenwood 2M or 440 HT (e.g., TR2500/2600/3500, etc.)
Heath HW8 (unmodified)
Argo 505 or other QRP rig
Hand-held scanner (e.g., BC100XLT, etc.)

Drop me a note if interested.

From: pcarter@freenet.columbus.oh.us
Message-ID: <4vvjbo$9bm@login.freenet.columbus.oh.us>
Source record: 218146

I have a 1996 Saturn SL2 automatic. I have recently installed a 1/4 wl antenna for 2m on the trunklid (center) and have noticed a radiated noise problem, on 146.52 and other freqs.

The noise appears when the engine is running. It disappears about 3 or 4 seconds AFTER the engine is shut off. It does not appear to be the fuel pump, as I can hear it fire up before I crank the engine, and the noise does not appear untill after the engine is physically running.

Any ideas? What would be still operating after the engine is shut off. It isn't the engine fan, as it wasn't on at that time.

The noise is not present in the acc position or without the engine being started, so I have ruled out such things as the ABS or airbag system.

TIA
Phil

John & Jay-

You've hit on the source of a problem: 800 MHz systems. It seems that not everyone is on 800 MHz. Those that are, have discontinued use of the VHF inter-city police and/or fire frequencies, since it means having to carry an extra radio.

In other words, this is a problem that was somewhat solved years ago, but has returned with the advent of trunking technology.

As well as being the problem, 800 MHz systems may also have an inherent capability that will lead to a solution, computer control. It requires that the trunked system have a feed to the radio channels of other agencies, so the dispatcher can patch them through for the duration of an emergency. As an alternative, a call-group might be set up with the cross-patching permanently in place. That way, a patrolman could switch to the "mutual aid" channel, and be able to communicate with all who are set up this way, without requiring dispatcher intervention.

Well, it isn't exactly 'flawless'...

>The only downside is I have to run a 250ms TXDELAY thru the repeater, as the
>PLL (of course) "sweeps" a little when switching from the TX freq, to the RX
>freq...and vice versa.

Oh, you've got a huge PLL settling delay. That *is* a flaw in 9k6
operation. 250mS? I won't use a radio that requires that much
TXD on 1k2. The problem is that a radio with that much delay
contributes significantly to hidden transmitter syndrome, *even on
a duplex repeater*. There's a huge window from the time you
activate PTT until your radio starts spewing a carrier, which
invites other stations to collide with you.

Also, the receiver recovery time means that you'll probably miss
rapid replies, they'll timeout and retry before you get the
frame. This won't happen if other stations are running similarly
long TXDs, but then you're really throwing away the 9k6 advantage
(a 256 byte frame doesn't take much more than 250mS to send; so
a TXD of 250mS represents a loss of 50% of potential throughput).

>Other than that...I like it very much, and it works well.

Um, save up your cash (under $150 for a clean Mitrek and rocks) and get
a radio that switches in 50mS (or less) and you (and all the others on
the same channel) will be much happier.

Sorry Zack, but for the privilege of using CW and speech, you must demonstrate proficiency in the setup and use of CLOVER? What? You say you'll never use it? Doesn't matter, for it is the one true "mode that get's through when nothing else will".

Do try to get the point here. Most of us "un-washed no-coders" agree with you that CW use may be entertaining, charming, even useful, but we are NOT forcing you to demonstrate proficiency in something ELSE to use it.

They didn't intend to conduct a statistically valid poll, nor was there
any intent to offer categorical exemptions (the FCC didn't intend to offer
any until the ARRL put political pressure on them to do so). It wasn't
a survey of the amateur population. All they were doing was getting
some real world baseline engineering measurements of real world amateur
radio stations to see if they conformed to the engineering models used
for field strength calculation. The stations measured were typical of
the real world sorts of stations amateurs operate. The nine stations
measured had a sufficient universe of antenna types and mounting
environments to confirm the engineering models.

>>I am thinking of purchasing a handheld scanner

>>I have been told the following units are quite nice:

>> Uniden BC3000xlt
>> ICOM R1
>> AOR 2700

Currently I have PRO-26, AR2700, and AR8000 handheld scanners. At the street price of around $200, I'd suggest the AR2700 as a best buy. While the RF and audio isn't quite up to the '43's, it's not that bad either. The two features I prefer over the '43 is the attenuation by channel (on all three models) and the computer interface to dump and load the frequencies. I do find the keyboard operation of the 2700 quite cumbersome for a scanner. It's virtually impossible to link in additional banks while drive.

My two cents worth.

Use an all-mode (FM, SSB) transceiver. Most of them are quite suitable,
even when it is not listed as such in the ads. Of course you will have
to make a modification in the latter case.
Best is to use a transceiver with a fast transmit<->receive switching
time, e.g. the ICOM IC-475.
When that is over your budget, stick with a Tekk. It performs equally
or better.

Of course, this ignores the RF stimulation of leukocyte
activity in the region of disturbance which could serve to
counteract the mutations, provided the stimulus continues
over a reasonable period of time.

> 18 WPM
> Morse), which has been shown to induce behavioral changes in animals
> (both planaria and mice) in the lab. I wouldn't call it safer.
>

This is another good argument for getting that code speed up to 20 WPM.

Unfortunately, in the real world, it seems things are more equal than
one might first assume. Most digital ops I know tend to run digital
power just below rig melt down levels. This is, as you say, probably
because of the lack of use of CLOVER or other automatic 6 dB gain
modes, or perhaps just shoddy equipment in general. On the other hand,
because of the robust and efficient nature of OOK CW, many operators
are challenged to operate QRP which further enhances the health aspects
of that mode, not only reducing the duty cycle but peak amplitude as well.

In fact standards are lower than that:
The ANSI-95.1,1982, adopted by the FCC in 1985,
limit the peak SAR to 8 W/kg and the SAR averaged over the body to
0.4 W/kg.

For exposure to incident power density, the 1982 ANSI-C95.1
exposure limits are frequency-dependent:
. 1 mW/cm2 at 150 MHz
. 1.5 mW/cm2 at 450 MHz
. 2.75-2.83 mW/cm2 from 824 to 850 MHz (cellular)

Some info on these can be found at URL's below:

In QST, October 1995, Vol. 79, No. 10, page 9, it says,

"From surveys, we know that 48% of the ARRL members in the United States already have access to the Internet, either directly or via an on-line service. Comparing this figure to the popularity of the various over-the-air communications modes, it would rank behind FM (79% of active ARRL members use it), SSB (also 79%), and CW (54%) - but ahead of packet (40%) and far ahead of any other mode."

That "some percent" is pretty high Bill. There are more ARRL members operating CW than there are on the Internet and CW's popularity ranks third only after SSB and FM.

Maybe you didn't see the editorial, but do you not listen to the CW bands? Don't you go out on field day? Haven't you ever listed on the low ends of the bands on CW contest weekends? How about the 30 meter band? Have you never listened there? It would appear you haven't.

CW is alive, well, and thriving. In fact, the demand for QRP CW transceivers alone has almost single handedly revived the kit industry. Just open your eyes and ears and it'll become apparent.

This has nothing to do with the so-called debate about Morse testing, but it does have to do with correcting your implication that there is little CW activity when in fact there is. You may believe that's the case, or perhaps you might even WISH it were, but quite simply, it isn't.

How about a throat mike. I picked on up at Okla. Comm Center (now out of business). I forget the brand name but they made models for different ham talkies. I used it both for bicycle mobile and airborne mobile (my twin engine airplane is an extremly noisey enviroment). It worked quite well and I am sure it would work for motorcycle mobile.

[993]

Newsline report number 993 for release on Friday, August 23rd, 1996 to follow.

(*****
The following is a QST

Ham radio has a new satellite. Its from Japan and is called Fuji 3. Learn more on Newsline report number 993 coming your way right now!

(*****
FUJI 3 LAUNCHED

Ham radio has a new satellite courtesy of the hams of Japan. Carried aloft on a Japanese H-II rocket, the amateur satellite JAS 2 was successfully launched at 01:54 UT on Saturday, August 17 by the Japanese Space Agency. This, from their space center in southern Japan.
Now renamed Fuji 3, several stations in the Americas and especially in the eastern USA reported hearing Fuji's CW telemetry beacon soon after it separated from the launch vehicle. This, over Antarctica during its first orbit. One of those stations was manned by AMSAT-NA's Executive Vice President, Keith Baker, KB1SF located in Xenia, Ohio. Baker says that being one of the very first to hear signals from a brand new Amateur Radio satellite has to be one of the biggest thrills one can have as a ham.
Fuji 3 is similar to OSCAR 20, although it offers some interesting twists. As soon as testing is completed hams will have access to an easy to use packet BBS. Unlike most digital satellites which function as file servers and require specialized ground station software, Fuji 3 provides a BBS that operates much like a terrestrial system. The only software required is a terminal program to talk to your TNC. Connecting to the BBS is as simple as sending a connect request to 8J1JCS.
Hams who own PSK TNCs can connect to Fuji 3 at 1200 baud, but unlike OSCAR 20, this new Japanese bird can handle 9600 baud FM Frequency Shift Keying as well. A digital voice storage unit or Digitalker will be used to transmit announcements, bulletins on the condition of the satellite and so on. It's similar to the unit presently being heard from the Mir space station.
Fuji 3 also features a linear transponder for SSB and CW. At this time

there has been no word from the Japan Amateur Radio League concerning an operating schedule for the transponder versus the BBS.

NEWSLINE IN FINANCIAL TROUBLE

A Special report from Andy Jarema
Support Fund Administrator

"Newsline support fund administrator, with some very bad news. My job is to make sure that the bills get paid, and I'm here to tell you that I'm about to pull the plug. Pull the plug on over 19 years of responsible, up to the minute reporting of the news that matters to you, the radio amateur. There's been a fleet of caring amateurs, just like you, bringing you the news as it happens. As amateurs, we're committed to the concept of bringing you that news voluntarily, without monetary compensation."
"Many of you have stepped up to the plate to help us, and we appreciate every effort. But the sad fact is that it takes an average of $1000 per month to keep Newsline on the air, with the online services, long distance to get the voices of the news when it happens, phone lines for the news feeds, postage services, and the like. For the past two years, voluntary contributions have averaged less than $500 per month. I don't have to ask you to do the math."
"How many amateur radio clubs are there in the U.S., or in the many other countries where Newsline is heard, or even more where it is now read and heard on the Internet? If each club would contribute just $50 to $100 a year to keep Newsline on the air, you would achieve the goal of keeping the latest amateur radio news flowing to you."
"As an MBA, and a CPA, and owning, building, then selling my own business, I don't like losing propositions. You've heard hams refer to "hitting the Big Switch". Newsline report number 1000, on October 11th will be our last newscast, unless you help now in a major way. We have no choice."
"Again, our address:

Newsline Support Fund
P.O. Box 660937
Arcadia, CA
91066-0937.

It's up to you..."

(*****
WIND PROFILERS ARE BACK

A new version of an old adversary to amateur radio 70 centimeter operation is reappearing, and this time with full government support.

Well, here we go again. The newest threat to the amateur 440 MHZ band has been announced by NOAA, the National Oceanic and Atmospheric Administration. WPRs or Wind Profiler Radar units operating in the 449 MHZ segment of the amateur UHF band are scheduled for deployment in the near future. To a number of sites throughout the continental U.S..

WPRs will be used to monitor wind velocity and direction. Frequency coordination, spectrum allocations, as well as possible in band interferance are being monitored by the Federal Communications Commission and the International Telecommunications Union.

And in a related item, the FCC and ITU are again under fire for possible spectrum sharing by our friends the Little LEOs, or Low Earth Orbiting satellites. This latest study into the possible frequency sharing has irred the soles of the radio and broadcast industry with their inquirys into 620-790 MHz band. Where will the Little LEOs end up? We're not sure, but they sure aren't making many new friends.

The irony of the Little LEO controversy is that their big brothers, the so called Big LEO's will probably be in orbit and providing the same projected services, long before the Little LEO's get the new spectrum that they are after. Its all but an exercise in futility, but one with tens of millions of dollars hanging in the balance and ham radio as a pawn in a high stakes corporation versus corporation chess game.

(*****
VANITY CALLS CANCELED

The vanity call signs of three hams have been canceled. In two of the cases, the vanity calls had been issued to former FCC employees that the commission says received their calls through favoritism.

In the third, the applicant was reverted back to his former call after it was found that he had been involved in a mid 1970's call sign scheme. A scheme that eventually lead to a criminal conviction of Richard Ziegler who was at that time the chief of the FCC's license processing facility in Gettysburg, Pennsylvania.

The action to rescind the three vanity call signs was the result of a letter sent to the Office of the inspector General. The OIG supervises audits and investigations relating to the FCC. It forwarded its evidence to Howard Davenport who heads up the Wireless Telecommunications Bureau's Enforcement Division. Davenport rescinded the vanity calls of all three on July 23rd.

(*****
ARRL ASKS FCC FOR MORE TIME TO AMEND EXAMS

The ARRL has asked the FCC to extend the time for its VEC and other volunteer examiner coordinators to add questions about RF safety to Amateur Radio exams. The request, filed August 12th in the form of an emergency motion asks the Commission to put off the deadline to add the new exam questions to July 1, 1997 for Element 2 and 3A examinations and to July 1, 1998, for Element 3B examinations. Those dates coincide with the already planned implementation dates for new examinations based on revised question pools.

Work to revise the question pools for Elements 2 and 3A has been under way for more than a year. Work on the Element 3B question pool will not begin until December.

The FCC Report and Order 96-326, issued August 1st, seemingly requires that VEC's immediately add five questions to each of the three affected examination elements. The provisions of the Report and Order became effective when they were published in the Federal Register on August 7th.

(*****
VANITY GATE 2 OPENS SEPT 23

This is a Newsline Instant Update.

Attension Extra Class hams. It will soon be your turn to file for the vanity call sign of your choice. This is because the FCC has announced that vanity call sign filing Gate 2 will open September 23rd.

After that date, Amateur Extra class licensees may request a vanity call sign of his or her choice on a first come first assigned basis. To qualify, you must hold an unexpired Amateur Extra class operator and primary station license to request a vanity call sign for your primary station.

To request a vanity call sign for a club station under Gate 2, you must also hold an unexpired club station license listing you as the license trustee.

Applicants should refer to the licensee database to verify that a requested call sign is not already assigned. According to the FCC, a call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancelled, or on the verification of the death of the previous grantee.

Requests must be filed on FCC vanity call sign Form 610V and the Commission says that legibility is critical. If your application is not easy to read, you could experience a delay in processing. Even worse, you might lose the opportunity to obtain a requested call sign or even obtain a call sign different from what you want.

Again, Gate 2 of the vanity call sign program to permit Extra class hams their choice of a new call opens on September the 23rd.

(*****
PRSG FILES ON FAMILY RADIO SERVICE

General Mobile Radio Service users do not want to share spectrum with a newly created Family Radio Service that could be a nightmare to control and their lobby group is taking a point position in asking the FCC to enact some major rules changes. The Michigan based Personal Radio Steering Group filed a Petition for Reconsideration that contends that current FRS rules do not preclude repeaters, nor do they bar the transmission of music and other sound effects. Also not covered is the transmission of obscene or indecent language or issuing phony distress calls. The Personal Radio Steering Group believes that all of these prohibitions must be put in place and that the FCC must also place a strictly enforced time limit on all Family Radio Service transmissions. It also is asking that FRS users be required to monitor activity on a channel before transmitting.

(*****
NOC-HSV

The small number of no-coders who attended a Newsline sponsored seminar session on codefree licensing at the Huntsville Hamfest agree that its time to do away with the Morse code entirely. Most expressed the view that only two classes of license are really needed any longer. These would be limited time duration entry level where you either upgrade in two years or you are out. The other license would be a more advanced radio amateur with full high frequency operating privileges. Neither would require mandatory Morse code testing, but all agreed that higher written exam standards, with emphasis on proper on the air etiquette should be put in place.

(*****
HUNTSVILLE UP

And speaking about the Huntsville Hamfest, manufacturers, dealers and distributors of ham radio equipment are hoping that the slight increase in attendance at last weekends event signals a nationwide change for the better. Since the first of the year, almost every convention and hamfest, big and small, has reported a significant decline in the numbers attending over past years. Even numbers at the giant Dayton Hamvention were down. This even though weather conditions were excellent. This downward spiral in attendance has made the ham radio industry very uneasy in committing to shows for next year.

But Huntsville was the exception. While still hovering around the 6000 mark in paid gate, the numbers were up a few percent over 1995. Scotty Neustadter, N4PYD, believes that Huntsville has bucked the downward trend because it has the right mix:

"I think its that we have the reputation as a friendly hamfest, with a very strong flea market and an all encompassing dealer show. I don't know how we could make the dealer show any bigger. Everybodys here. Anybodys product line is here. Plus I think frankly the town is the right size, the hotel rates are reasonable, the space and rocket center is here, so somebdy who is iffy about coming says I can always drop the wife and kids at the space and rocket center while I go play with radios. And all that stuff just comes togather, I guest it is kind of synergistic that it works." Neustadter

For Huntsville it does work, and those in the commercial exhibit area like Evelyn Garrison, WS7A with Alinco agree:

"An excellent show. We sold a lot of HF units that people told us it was not going to happen down here. But it did. We sold a lot of the 605's dualband mobiles, which is our new radio. I'm really pleased." Garrison

Garrison also gives credit where she says credit is due:

"The committee really works at making this one up. They send out flyers. They work to make it happen all year long. It is not somethink that happens by accident." Garrison

As positive as the signs were at Huntsville, two groups were very obvious by their failure to show up. These were the younger hams. The teens and pre-teens who, up until this year have been attending most conventions in fair numbers. Few were at Dayton in May. Even fewer were seen at Tulsa and Birmingham earlier in the year. Almost none were seen at Huntsville. Even more significant was the failure of no-code Tech's to come out in any numbers.

(*****
DARA CHANGES

Some major changes are coming to the nations best known ham radio club.

Many activities put on hold for the summer get back into full swing. One organizations has been back burnered for the summer. The Dayton Amateur Radio Association has operated this way for years. Giving the members some post hamvention recovery time and allowing the new officers elected in June time to get with the out going officers for a smooth and orderly transistion.

For the first time, DARA has a female president. Well aware of the old saying, I you can't stand the heat - get out of the kitchen. Michelle Ervin, KA9FUL is ready to stook the fire and stir a few things up.

"I think that one or two of the most important things that the amateur community in general will see from DARA within the next year is our concerted effort to expose more youth to ham radio." Ervin

Already a contesting committee for the DARA club station, W8BI has been established and a foxhunt squad is being assembled. In addition, youth programs and the SAREX liason group are working closely together with the education committee to expose area youth to the hobby.

Michelle Ervin says that its time for the club to pull together for more than just then annual Dayton, Hamvention, even if pulling together just means having a lot more fun.

(*****
OVERSEAS ACCUSATIONS REFUTED

From overseas, word that hams in Italy and several other nations are very angry over accusations that their terrestrial operations interfere with satellite communications. They say that like it or not, they are legal and that they can run FM and repeaters where they please.

Packet and internet postings from hams in Italy say that the Italian Telecom Ministry allows them to operate on 435-436 as a primary service and on 432-434 Mhz and 436-438 MHz as secondary. That no mention is made in Italian communication law of separate satellite subbands. As such, the FMers say that they are free to do as they please.

The Italian Amateur Association has requested that all of its members use and respect the IARU bandplan and the organization has had some success. But non members can and often do operate where they want using any mode that is legal. Because of the way that the rules are written, no

action to prevent them from using satellite frequencies will be taken by the government agency.

(*****
UK: NO MORE 934 MHz CB

The United Kingdom will cancel its 934 Mhz Citizens Radio band on December 31st of 1998 and the band will be converted to a commercial digital telephone service. The current 27 Mhz United Kingdom CB service will continue to be available until further notice from the UK Radio Communications Agency.

(*****
MARCONI DAUGHTER DIES

Gioia Marconi Braga, the daughter of inventor Guglielmo Marconi, died on July 17thn New York at age 80.
Gioia Braga was Marconi's fourth child from his first marriage to Beatrice Inchiquin O'Brien. She was born in London on April 10, 1916, and studied in Italy. In Rome she worked with the Italian Radio Association and in 1974 founded the Marconi International Fellowship, which recognized the creative work of scientists and technicians in the communications field.

(*****
FCC HONORS McMAMARA

Robert H. McNamara, chief of the FCC's Private Radio Division in the Wireless Telecommunications Bureau was among several FCC employees recently honored for advancing the mission and objectives of the FCC. This, through their sustained extraordinary or exceptional accomplishments.
Bob McNamara received a Distinguished Service Award gold medal. His Private Radio Division regulates the Amateur Radio Service.

(*****
DX - DXCON

In DX, the Northern Illinois DX Association says that the 44th Annual W9DXCC DX Convention and Banquet will be held Saturday, September 7th, at the Holiday Inn Rolling Meadows, Illinouis. There will be interesting programs, guest DX speakers, industry representatives, contests, exhibits, QSL checking, hospitality suites, banquet activities and prizes. For more information please contact:

Phil Camera, KB9CRY,
at (708) 343-1696 CST.

(*****
HOLLY-MOVIE

And finally, the made for television movie titled What Love Sees will on Sunday, September 22nd on CBS. What does this have to do with ham radio" Well, What Love Sees is the story of the story of the Holly family of Bristol, Connecticut and, later of Ramona, California. Actually it traces

the courtship of the blind daughter of an overprotective New England
industrialist to a blind back-woods California rancher. It follows them
through their marriage and raising four children, the youngest of which
looses his sight at age seven.

Now here is the ham radio connection. If the family name Holly sounds
familiar it because the youngster who looses his sight is today a ham well
known to radio amateurs world-wide. That being Hap Holly, KC9RP, the
founder of the Radio Amateur Information Network.

"Filming of a two hour TV movie was completed in March as some of you
know. The editing took less than ten weeks.
Rosemont sent a brail copy of the script to my mother and me. And it
was a kick. What a major kick to read the lines and scenes that are going
to be portaryed in this movie this fall." Holly

What Love Sees stars Richard Thomas of Waltons fame as Haps dad and
Anabel Gisch as Haps mother Jean. Hap Holly, long before he became KC9RP
is portrayed by Courtland Mead. Mead was last seen the remake of the
Little Rascals movies.

Again, the movie What Love Sees airs on Sunday, September 22nd on CBS.
Consulting local listings for time and channel.

>third only after SSB and FM.

That some percent is not mean that 54% of all QSOs are CW as anyone
can see. If someone made one CW QSO a year they'd answer
in the affirmative. All the above states is that slightly more than
1/2 of ACTIVE ARRL members operate some degree of CW.
In any case, it alone still doesn't serve as hjustification to mandate
that anyone needs to learn CW. If someone wants to hold CW
QSOs, they'll learn it on their own without the forced requirement.

>Maybe you didn't see the editorial, but do you not listen to the CW bands?
>Don't you go out on field day? Haven't you ever listed on the low ends of
>the bands on CW contest weekends? How about the 30 meter band? Have you
>never listened there? It would appear you haven't.

These comments don't support CW testing, they support the use of
CW... something that I and most anti-testors have no problem with at
all.

>CW is alive, well, and thriving. In fact, the demand for QRP CW
>transceivers alone has almost single handedly revived the kit industry.
>Just open your eyes and ears and it'll become apparent.

Then why must the skill be mandated as a test element. If it has
continued interest it'll thrive on its own.

>This has nothing to do with the so-called debate about Morse testing, but
>it does have to do with correcting your implication that there is little

>CW activity when in fact there is. You may believe that's the case, or
>perhaps you might even WISH it were, but quite simply, it isn't.

I never said there was LITTLE activity.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 AUGUST AND FORECAST FOR 28 AUGUST - 30 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 26 Aug
Daily Proton Fluence >1 MeV: 5.9E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.0E+08 (moderate)
X-ray background: A6.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Aug 29 Aug 30 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Aug: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 26 Aug
Learmonth 14 3333 2432
Fredericksburg 15 13
Planetary 15 13

Observed Kp for 26 Aug: 3443 1132

2B. MAGNETIC FORECAST
Date Ap Conditions
28 Aug 15 Unsettled to active
29 Aug 15 Unsettled to active
30 Aug 20 Active
COMMENT: IPS Geomagnetic Warning 9 was issued on 26 August and
is current for interval 26-30 August. Active levels are expected
next three days due to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
27 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
28 Aug Normal Normal Fair
29 Aug Normal Normal Fair
30 Aug Normal Fair Poor
COMMENT: High latitude HF comms remained normal yesterday. However,
degraded high latitude HF comms are still expected over the next
three days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
27 Aug 15

Observed Australian Regional MUFs:
near predicted monthly values at all sites.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
28 Aug 10 near predicted monthly values
29 Aug 10 near predicted monthly values
30 Aug 0 10 to 20% below predicted monthly values
COMMENT: HF conditions remained mostly normal yesterday. Low
and Mid latitude HF conditions are now expected to remain good
until 29-30 August. Degradation HF conditions at mid latitudes
may be experienced on 30 August.

A couple of my engineering students and I picked up the frequency companding idea and implemented it on the TI DSK DSP evaluation board. It was written up
in QEX a while back. The editors allowed me to put a copy on my web page. You can see it at http://www.wwc.edu/~frohro/qex/qex-art.html. We didn't implement the amplitude compandor, but that could be added in. Our testing indicated that it was a feasible system, but I doubt it will ever catch on, as there are better ways of reducing the spectrum with DSP.

I also have the same noise. If you fix it I will send you a BIG attaboy!

In the Cleveland area we have ratchet jaw QSOs cloggin up the calling
channel so it isn't used much. No incentive to fix the noise here as
52 isn't a calling frequency.

Looking for plans to build a discone antenna for RX 25-1300MHz and TX 6M/2M/440/900/1200MHz. I have access to materials, but need plans.

Any help or even recommendations on commercial kits would be appreciated.

Thanks,

Dave Formilan

1770. computer DTMF tones

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-27 00:00:00 UTC
From: Pyrodex <jjeffers@wms.luminet.net>
Message-ID: <3222D03E.2ED9@wms.luminet.net>
Source record: 218168

Hi everyone!

I'm pretty sure that there is better groups for this but here is my problem:

A new reapeater controller that I just got requires DTMF tones at faster then one per a second to prgram it. (I think it is in there so people don't attempt to hack it ;-) What I need is a program that would send out the DTMF tones from my laptop computer.

So I'm wondering if anybody has a chunk of C code they could send me so I could modify it for my use. I've tried it in basic but I have nut come up with a way of doing with inder a second delay. I know C++ for dos so that would be perfealble.

Also if there is a program already written were I can give it Hertz tones and it will generate DTMF's that is fine too.

Thanks for your time

Jim KB0THN

P.S. Please e-mail reply as i have an unreliable news feed.

John:

This set is from the BC-1225 and may be in the CS-137 case. You can use
the 40m crystals and the 8 meg rocks are good in an older AM 2m rig like
the Gonset Communicator series.

Hope this helps!

>"other than possible rf burns."

1000 W of microwave energy isn't "rf burns" -- that's "tissue heating". The chicken that I pop into the microwave oven to warm isn't rf burned hot, is it?

RF burns are what you get when you grab onto someone's antenna when they're transmitting.

>>>
>
>I cannot TYPE 1125 wpm. In fact, I can send CW faster than I can type!
>I'm not even sure I can TALK 1125 wpm.

I am uncharitably driven to repeat the Morse proponent's cry
of "Practice!" in response to your reported low typing speed,
but I'll try to give a better answer than that.

Yours is a common reaction. If it didn't overlook several important
factors, we'd all we content to use 300 baud Bell 202 half duplex
modems here on the net too since that's equivalent to 450 WPM, and
none of us can type that fast either. We aren't, however, and therein

lies the answer for the need for speed. We can convey much richer content than simple text with a bit of speed. For example, if we are discussing a circuit or antenna with our contact, we can bring up a whiteboard and draw a diagram for him if we have sufficient speed. We can't hope to do that plodding along at 20 WPM. We also typically have canned "brag tapes" that we send to new contacts to let them know something about us and our stations. Letting that dribble along at 20 WPM would take intolerably long.

And there's another side to this as well. IF we truly don't have more to say than can be conveyed in a few minutes at 20 WPM, we can drop our transmit power until the CNR is actually *negative*, and still have enough throughput to maintain 20 WPM text. We can't do that with OOK Morse at all. With Clover, we reach that point with a CNR of -4 db, and with PACTOR II we reach it at -18 db on a non-fading channel. On a poor fading channel, Clover doesn't do so well, requiring about +2 db CNR, but PACTOR II continues to operate at the desired throughput with a CNR of less than -10 db. That's about 20 db less signal than a good Morse operator needs to maintain error free 20 WPM.

Note, a very skilled weak signal Morse operator can detect Morse signals at mildly negative CNRs, but he can't approach 20 WPM when signals are that weak, PACTOR II can. In a time where large outdoor antennas have become difficult to install (due to restrictive covenants, apartment living, etc), where TVI and RFI are a concern (due to a myriad of shoddy consumer electronics co-located with many of our stations), and where the current level of awareness of RF exposure hazards is heightened, a technique which can work well with very low transmit power should be welcomed and fully embraced.

>This is still a HOBBY ... only a HOBBY. It is what you want to put into
>it, and the wonderful thing about it is that it is so diversified there
>is something for everyone.

I grind my teeth every time I see that "only a HOBBY" line. We are amateurs voluntarily, self-selected by free choice, and we enjoy what we do, but it is more than "only a HOBBY". The service has chartered purposes for us to fullfill. That differentiates amateur radio from playing golf or from collecting stamps. Those latter activities *are* "only hobbies", but amateur radio is more than that. We are chartered to self-train in the radio arts, further those arts, provide public service and emergency communications, and foster international goodwill. We can, of course, have fun doing those things. That is our only reward. But puttering in a backwater of radio technology isn't fullfilling the first two elements of the charter very well, and could be impairing our ability to fullfill the third. The amateur radio operator's Code (ARRL) says "An amateur is progressive". We need to think about that once in a while.

>There are those who wish only to chat on 2 meter FM with HT's. Fine ...
>there's a place for them and I enjoy their company. There are those who

>wish to play around with technology ... fine, they have their places too.
>I also enjoy reading about that aspect of the hobby.
>
>Some of us (myself included) are DXers, contesters and VHF DXers/contesters
>who build their own VHF equipment. We have our places in the hobby, too.
>
>The thing is that it is a communication hobby as well as a technology
>hobby. Live communication. I'm not trying to send a novel to the
>guy at the other end; I can do that on Internet. But considering my
>typing speed I don't need to send data at 2500 wpm or whatever; I just
>want to communicate with they other guy in real time and if I can send CW
>at 60 wpm, type at 45 wpm or talk at 300 wpm I'll still exchange ideas.

Yes, you can, but you can also do better than that. You can exchange more ideas, or exchange them more clearly and fully, with better techniques. You can also reduce the RF pollution on the bands, thus allowing room for more people to do likewise by reducing the power necessary to communicate. If you really only have a few hundred words to say to another person, you can do it in a couple of minutes instead of an hour, thus freeing the spectrum for others to enjoy, or allowing you to interact with more people in a given amount of time. There are many reasons why you might want to use speeds greater than your personal typing rate, and to use techniques which require less power and bandwidth than other methods to boot.

The Amateur's Code says we're to be progressive, but it doesn't say we have to be progressive every minute. We can use older slower less efficient and less effective techniques from time to time if we get enjoyment from doing that, but we shouldn't turn our backs on better techniques in the process. We should be educating ourselves in modern communications theory and practice as an ongoing matter of course. We should be able to recognize that there are other and better ways of doing things than the methods we've used in the past. And we should be able to do some of those things too from time to time.

As you note, not every amateur needs to do everything. There are a multitude of things to do in amateur radio, and many of them have value as well as being enjoyable. As amateurs we have diverse interests, but we should all have the charter purposes of our service in sight as desirable goals to be pursued. That doesn't mean we all have to become (moderately) high speed digital operators, or dedicated ARES operators, or rabid goodwill ambassadors, etc, but we should be extending ourselves in some direction constantly, and not just be stagnant backmarkers filling up space (and spectrum) without any real purpose or direction.

The Army's recruiting posters proclaim that it is "Not just a job, it's an adventure." We should approach amateur radio the same way. It is the best hands-on learning laboratory to which we're ever likely to gain admission. We should take full advantage of it. We're never too old to learn new tricks, unless we let our brains fossilize by going over and over the same ruts day after day. There's nothing more

exciting or enjoyable than gaining a fresh insight, or mastering a new technique. New ideas serve to blow out the cobwebs and sharpen the intellect.

Gary

>I guess, Jeff, the fact that CW is allowed on all amateur
>allocations doesn't matter to you? I mean, there are
>*no* frequencies where CW is prohibited, so there's
>no need to explicitly mention it is allowed.

Hi Dana,
Then why list any mode at all? Surely if one were to know that CW is
permitted on 30M they would then know that RTTY and data are permitted, too.
The person who posted the original query mentioned he felt as if he'd
woken up from a "deep sleep" regarding the WARC bands; if he doesn't see
CW listed above then just maybe he might get the impression that CW
is not allowed. (A point in favor of Gary's post is that he did mention
that there were no CW sub-bands, but why save that for the small print
at the bottom?)

All the HF spectrum charts I've even seen have included CW - with your
reasoning they shouldn't.

How did you originally discover that CW was allowed everywhere on HF?
Again, with your reasoning that fact should not appear in print since you
feel it is a given and everyone is born knowing it.

Last time I checked, no one is forcing anyone to USE CW - just learn it. I stand by my original opinion that Amateur testing should encompass the hobby from A to Z. That means that RTTY, CLOVER, PACTOR, and CW all should be included, even if perhaps the former have a smaller following than CW.

Besides, the VHF and UHF bands, were CW is less frequently used, are the ones being threatened, not the HF bands. I don't consider the threat to the VHF & UHF areas to be a valid argument against CW testing, since those areas are already open to those with a no-code license.

Could Newsline get rid of most of their audio "phone answering machine" phone lines (the ones deceminating(sp) the newscast). Most people are at "long distance" distance away from all these numbers, and after you get past about a hundred miles, phone call rates are about the same.

Or just keep posting the text of the newsline report on the Internet, and forget about the audio voice newscast. A 15 minute wav file is probably too big to ftp or post, though...

Last price reduction:

Kenwood TS120S station; 80-10M SSB/CW rig (no WARC), 200W PEP input,
digital display, w/YK88C CW filter. Rig is in excellent condition.
Includes:

SP120 external speaker
MB100 mounting bracket
Generic hand mic
Owners and Service manuals

$280, firm, plus shipping, for the whole station.

In article <4vvri9$c0r@abyss.West.Sun.COM> myers@West.Sun.COM (Dana Myers) writes:

Hello Dana.

>>I run a Kenwood 451a on 9.6k 24 hours a day. Some will claim this radio
>>is inadequate for 9.6k operation, and I have not had it on any test equipment,
>>but it runs flawlesly with my Kantronics 9612 on both, the 9.6k repeater, and
>>keyboard-to-keyboard.

>Well, it isn't exactly 'flawless'...

How so?

>>The only downside is I have to run a 250ms TXDELAY thru the repeater, as the
>>PLL (of course) "sweeps" a little when switching from the TX freq, to the RX
>>freq...and vice versa.

>Oh, you've got a huge PLL settling delay. That *is* a flaw in 9k6
>operation.

Well I wouldnt call it a "flaw"...I think what you mean is "unacceptable". And
it should be noted, that referes to you...not necessarily anyone else.

>250mS? I won't use a radio that requires that much
>TXD on 1k2.

Fine...again...those are your standards, and you should be comended for keeping
such high standards, but the fact is...most folks use 200 to 350ms TXD @ 1200
bps.

>The problem is that a radio with that much delay
>contributes significantly to hidden transmitter syndrome, *even on
>a duplex repeater*. There's a huge window from the time you
>activate PTT until your radio starts spewing a carrier, which
>invites other stations to collide with you.

I wouldnt call it "significant", nor would I call the window "huge". fact is,
the PLL lock takes less than 250ms...it is set there to allow a buffer. But you
are correct about the collisions, however, collisions can happen even with
rigs set at 50ms.

>Also, the receiver recovery time means that you'll probably miss
>rapid replies, they'll timeout and retry before you get the
>frame.

True, but I have not experienced that problem. Granted there are not a lot of
users on 9.6k in our area, but all of my operation has been solid, with no

retries.

>This won't happen if other stations are
>running similarly>long TXDs, but then you're really throwing away the 9k6
>advantage>(a 256 byte frame doesn't take much more than 250mS to send; so
>a TXD of 250mS represents a loss of 50% of potential throughput).

You need to consider more numbers in your formula. If PACELEN is set high, and a few other parameters that escapes me right now, one can TX and RX a very large block per transmission/reception. I can collect (and send) a full paragraph per transmission. The difference between 1200 and 9.6 on my station is obvious.

>Um, save up your cash (under $150 for a clean Mitrek and rocks) and get
>a radio that switches in 50mS (or less) and you (and all the others on
>the same channel) will be much happier.

While I appreciate your comments Dana, not everybody has the experience, know-how, and money to do everything "the best way" on their first try. Just like the recent threads about taking better advantage of higher speeds in the higher bands...I am doing just that.

Yes, I may not have the "best" setup, but I am sure not going to critisize someone who is trying to move ahead...regardless of their equipment.

Take care.

Since becoming a ham and reading Newsline posts on USENET I've never seen
any posting from them that did not say they were in financial straits.
Now, I don't doubt that it costs a lot to operate the service ($1000/mo
is a lot of money though) but if people are not willing to pay for the
service they should just close it down, period, and save us from repeated
cries of hardship and needing cash.

Hi All,

I would like to build a power inverter for mobile use. I would like
to be able to convert 12v DC to 120 vac at around 2500 watts output.
Although I have some experience designing and building regulated DC
supplies, I am not familiar with inverters.

I would appreciate any suggestions on books or other sources of schematics.
If there are kits available, that information would be welcomed also.

Please email direct.

Thanks,
Jon KN4AE

But you won't back up your statement with facts like what repeater equipment I tore up, where, belonging to who, type of equipment, & how I was not competent. You ran your mouth but now that you have been asked for facts you stay quiet. If it was so famous you would not need to talk about it because every one would know. You are telling stories without facts to boost yourself & your friend Cheek. You won't even post this message you are referring to.

> If need be, I could post it here for all to interpet any way they

I've asked you to twice now but you won't.

1789. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.841299306$113@GRAFex.sbay.org>
Source record: 218071

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your
system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE

and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP
(plus other stuff). Will dearchive PKUNZIPped files, as well as
UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a
utility, such as StuffIt to decode. There are also UUDECODErs
and other de-archivers available. See the index for
/hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==

o If you are ordering from a ccmail system, be advised that ccmail
in its default configuration attempts to automatically UUDECODE
files. If your order is sent in parts, it will hiccup after the
first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite
regularly with messages. And, since the path is incorrect, I cannot
contact you to let you know. Try the PING command to check that
the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file
for correct syntax.

o The file name has changed since the INDEX was generated. Order a
new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post.
Orders are only honored when sent to HAM-server@grafex.sbay.org.
That's the way the software works.

YOUR HELP IS NEEDED:
====================

If you have a program you would like placed on HAM-server, you can email it
uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I
need to take care of quickly.

You GOTTA be kidding! 2500 watts from a 12v battery? Minimum of
260A draw? Maybe, if you are prepared to carry around about 1000+
pounds of deep-cycle marine batteries for a very few hours of operation
(if that).

As usual, your reading comprehension is poor, Jeff.
The above is straight from 97.305, and CW is *not*
a listed mode in the sub-band allocation tables.

THERE ARE NO CW SUB-BANDS ON HF! As I noted at the
end of the posting (which you convienently edited off),
CW is, of course, allowed on *every* amateur frequency,
and thus is *not* shown in the mode sub-band allocation
tables.

Hello,

Clubstation SK7AX is located in JO77DS (Sweden). We would like to have
EME-sceds. We have 4 x 15el and 800 Watts (not so many watts for EME,
but we will have more soon!)

Sceds to:

Packet: SM7UGO @ SM7UGO.F.SWE.EU
E-mail: el96pema@ing.hj.se

Packet: SM7UGE @ SM7UGE.F.SWE.EU
E-mail: fredrik.elversson@mailbox.swipnet.se

Hi! I have the following for sale:

Maldol HS-VK5jr HF Vertical Antenna; covers 80-40-20-15-10M. It stands about 22' tall, and has a tunable "counterpoise" for each band, attached to the bottom. It is unused, having *never* been out of the box.

$50, OBO, + shipping, or trade for 40-20-15-10M Hustler standard resonators/Hamsticks.

AT&T Model 5471 Cordless Phone; 10 channels, black color, used very little, W/instructions.

$25, + shipping

Please drop me a note if interested.

>they've got a lot of huevos passing themselves off as the "spokesman for
>the ham community at large" ...

It is the only organization recognized by the FCC, the US Government,
and ITU to represent amateur radio!

>It's damned time that they considered the views of non-members (and even
>non-ham wannabes) in formulating "policy" that ends up being presented
>to the FCC as "the will of the nation's hams."

I think non-member views are being considered. Anyone can fillout the
survey and return it to ARRL. Directors certainly listen to
non-members.

>Actually, I think it's time for someone to organize an alternative
>national organization to gather member views, formulate ideas for the
>future of ham radio, and present input to the FCC that is more
>accurately representative of the views and desires of the true majority
>of hams (and even, perhaps as a separate category, an encouraged
>participation by currently-non-ham wannabes).

This has been tried several times with NO SUCCESS. Opposition to the
League is not and never has been organized well enough to put together

such an organization. The most famous was NARC established because
many though the League was "CW" forever and did not look after the
concerns of the phone gang. Now (45 years later) the league is being
attacked as being anti-CW. You go figure!

My own view is that there are about 200,000 active hams out of the
650,000 in the USA and ARRL has about 50% of that. The other 50%
would make a real difference on the ARRL policies. Both groups need
to find out about the other 400,000 (maybe 300,000 as probably 100,000
are SKs).

Will CW go away? Several nations will ask, but WRC-99 will keep the
requirement as will the FCC. Probably 12 or 13WPM will be the max
speed required ...AH6NB had an excellent proposal he sent to ARRL/IARU

and I expect that 5 WPM gets you General level privileges by 2001.

I have an ngoing problem with the tuning knob to change channels. When turned the channels may go up (1,2,3,4) but usually start skipping around (1,3,7,5,4,5,6,7,3,2,1). I understand that this is a typical problem with this handheld. Anyone have any inexpensive solutions? Will Yaseu fix this for free? If I get them to fix it, will the problem reoccur down the road? I know that the keypad channel keys continue to work well.

CompINFO Services provides innovative techniques for computer users,
like yourself, to start his/her own business doing what they like most,
talking computers.

Our newest publication can provide you with a proven step by step method
to become a successful COMPUTER CONSULTANT and make up to
and beyond $5000 per week.

This method is no gimmick! It has worked successfully in our test market
and our consultants have shown profits of $500 per appointment.
This method is sure to revolutionize the computer industry! Don't miss out
on your opportunity to have financial independence!!

There is no capital investment and you can start you business in your spare time!
Soon, your old job will be a thing of the PAST!

CompINFO Services offers you, Computer Consulting Made EASY.
A publication authored by the consultants that have made it work. This text
takes you from start to finish with no stone unturned. All you need
to purchase is the knowledge to make it all work!

Just send $19.95 (Check or Money Order Please) to :

48% is altogether not too shabby for a medium that has only been accessible to
the general public for about three to four years.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated June 24, 1996

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

AUGUST

August 4 (Sunday) - Peotone, IL - Hamfesters Radio Club 62nd annual Hamfest and Computer Festival. Will County Fair-grounds, Peotone, IL I-57 Exit 327 East 6a.m. - 3 p.m. Air conditioned main exhibition hall opens 8 a.m. Lots of covered flea marked space, acres of free parking. Grand prize $500, 2nd Prize $300, $100 for 3rd Advance double-stub tickets $4.00, $5.00 at gate for more info e-mail Jim Riley KB9CYL at rileytrix@aol.com

August 10 (Saturday) - Western Illinois ARC Swapfest, Quincy, IL. Eagles Alps Grounds 3737 North 5 th Street. 4.5 miles north of downtown Quincy with easy access from US Highway 24. 8:00 a.m. to 2:00 p.m. Admission is $3.00 at the gate, $2.50 in advance, per person. ARRL VEC testing, all classes, is at 12:30 p.m. Reservations go to NA9Q at (217)224-8526. Indoor flea market is $5.00 per 5-ft table. Outdoor tailgating space is free. Talk-in is on 147.03. Lunch will be served on the grounds.

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Ham-fest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville,

IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

First I'd like to point out that I only wrote the stuff I
"unindented" to
">>" above ...

>I cannot TYPE 1125 wpm. In fact, I can send CW faster than I can type!
>I'm not even sure I can TALK 1125 wpm.

I'm sure the pervious statements are correct ... however, typing in
real time is not the point. If I can buffer up data and "burst"
transmit it across the channel at 1125 wpm, then I only have to use the
channel 1/225th of the time to maintain a constant apparent throughput
of 5 wpm.

This permits time division multiplex multiple access use of the
(same) channel by up to 224 other pairs of users (assuming a protocol
that would allow 100% efficient channel access ... YMMVS)

The protocol could alternatively coordinate the use of the channel by,
for example, 4 users transferring files (to four other users) at 250 wpm
and 25 user pairs doing keyboard-keyboard or other low rate data
exchanges at 5 wpm. (again, YMMVS)

Can you see that, with a little imagination of what's possible beyond
CW, one can invent a lot of other interesting (and useful) uses for the
spectrum?

BTW, one could send CW by key, have the computer convert it into a simple stream of "1" and "0" symbols (or multi-level code it to represent di, dah, letter space, and word space), code that data stream with a FEC EDAC code so that it could be decoded reliably at signal levels at which CW signals could not begin to be copied by ear, transmit it to an appropriate receiver which would decode it and restore it to the audio symbols di, dah, etc. and output the "CW" audio.

"Why?" You might ask.

Because, to illustrate the benefits of spectrally-efficint modern technology in terms the average CW user might comprehend, I'll bet if someone (or a small group) were interested enough in "CW" to take the trouble, they could design (assuming they had the requisite technical know-how) a protocol/modulation/coding scheme that would support this hypothetical type of "CW" virtually error/interference-free at an occupancy level of something like 2500 simultaneous 20 wpm QSOs in a chunk of spectrum no bigger than the 20m CW sub-band.

Assuming a conventional receiver bandwidth of 500Hz, that same 150kHz (last time I checked) sub-band would only support 300 simultaneous non-interfering QSOs using conventional CW (and that's assuming, VERY gratutiously, that those conventional receivers had ideal, "brick wall" filter response).

Let's see, that's 2500/300 = an 8.33:1 efficiency edge for the digital "CW" crew ...

>The thing is that it is a communication hobby as well as a technology
>hobby. Live communication. I'm not trying to send a novel to the
>guy at the other end; I can do that on Internet. But considering my
>typing speed I don't need to send data at 2500 wpm or whatever; I just
>want to communicate with they other guy in real time and if I can send CW
>at 60 wpm, type at 45 wpm or talk at 300 wpm I'll still exchange ideas.
>

Again, the advantage is not necessarily sending it faster so you can send more, but sending it faster so you can "go away for a while" and let other folks have a crack at using the same spectrum ... it's another form of efficiency.

>So for those who wish to see how many novels per hour they can send via
>CLOVER, well - have fun. I still enjoy reading about your results. But I
>still like those slower forms of communication, CW and speech. They are
>also fun in this hobby, to me at least. And to a few others ... I've had
>several one-hour CW and SSB ragchews recently.
>

Fine ... multiplex your "CW" bits in with the others and rag-chew all you want ... just don't force me to do it ... I'd rather use my bits in other ways.

If we don't use our spectrum more efficiently, we'll lose it to those who will invent more efficient, productive used for it.

>above figures. That reduces the safe distance for controlled exposure
>to just 1.38 meters, and for uncontrolled exposures to 3.15 meters.
>That's much better.

Although the FCC report and order says nothing about the near field
problem when calculating HF limits, IEEE C95.1 1991 says in a 'note'
to the tables for controlled and uncontrolled that the MPE is the rms
E and H limits given in the tables. Thus, IEEE C95.1 1991 essentially
tells you to use the far field values. In the case of your isotropic
example that uses 100W ERP, E= 1842/f or 61.4V/m and H=16.3/f or
54A/m for controlled exposures. This yields a radius of .89m for E
and .27m for H (whether near or far field). For uncontrolled, E
=823.8/f=27.46 V/m and H=the same as for contolled = .54A/m.
This yields radii of 2m for E field in uncontrolled and the same .27m
for H in uncontrolled.

Note that when doing the power density calculation, f**2 should be
used, not "f". When calculating power density for the 3-30MHz range,
the power density is the same E field 1mW/cm**2 mentioned on the ARRL
website. The H field power density limit is 10000/f**2 or
11.11mW/cm**2 for controlled and uncontrolled. You will obtain the
same radii for E and H using the "S" for E and H (power densities)
column as you do when using the E and H field columns in all cases.

Using the isotropic antenna at 100W ERP, the standard tells you to
stay .89m away from the isotropic antenna in controlled environments
and 2m away from uncontrolled environments. With a real dipole type of
antenna, the hotspots will be the feedpoint (H field) and the

endpoints (E field). Theoreticaly, the distances should not exceed the worse case example of the isotropic antenna. When adjusting for 1000W ERP, the radii do not increase by 10 because it is a SQRT relationship, so the distances are not as high as one might initially think.

Although the calculation is easiest to make on an isotropic antenna, I have not been able to find or build a good one ;)

Gary:
I have a copy of the report on my desk. This report amounts
to just a lot of measurments. There was no calculation of fields strenghts,
then the confirmation of these calculations. Far and Near fields were mixed
together and no organized approach was used. If fact when I was in school
if I submitted a report such as this I would have received a grade of "F".
On the first page it infers that this is a product instigated by one Dr.
Wayne Overbeck(a concerned citizen) whos qualifications or political
affiliations aren't mentioned. Somehow the FCC took Wayne Overbecks
word verbatum and put into law. The title "concerned citizen" is from the
FCC 96-326's discription of Wayne Overbeck. Interesting.
It sure would have been nice that if the time that was spent
taking
all the measurments were coordinated using known and accepted Engineering
principals. The 50 watt limit is right off the top of one Wayne Overbecks
head is completely without scientific validity. The commercial limits were
only set as to not upset existing installations the 1KW ERP limits are just
as invalid.
Congressional mandate requires that rules be valid and

scientifically
defensable to be written into law. This issue demands good science as the issue of hazards need to be resolved, not the advancement of political causes.
Amazing was the fact that the issue of RF burns was only given passing mention. The issue of induced currents into house AC and Phone wiring wasn't considered even though it in some of the cases influenced the value of the measurments. There needs to be a study made using accepted methods to obtain real data as to the field strengths in the various installations. This should have been done before the ARRL submitted their comments. The ARRL has set themselves up as the voice of Amateur radio yet they have done little else than appoint a committee. Hey, folks this issue came up more than 10 years ago, lets not rush into anything.

Zack, the point of high speed communications is not how much material you
can send to your friend, but how fast. Like it or not, the spectrum will only
continue to shrink for us, yet there are more and more hams. The answer?;
more hams use the same frequencies at the same times with high speed data and
digital voice modes. I don't think its as much fun, either, but at least
we'll still be on the air.

Below is an excerpt from this weeks Amatuer Radio Newsline. Having heard this last Sunday on our weekly local net and again having read the original posting tonight, I have been struck by the same thought...

Since becoming a Ham I have also been a member and supporter of the ARRL. The Newsline seems to me to be just the kind of Amatuer community service that I would exepct the ARRL to recognize and actively support. The Twelve thousand dollars that would keep the newsline in operation for a FULL YEAR cannot be that large an amount to the ARRL.

I would like to use this forum to publicly ask the ARRL to make a major donation, if not an outright subsidy to the Newsline folks and would ask other amateurs to write the ARRL and ask the same.

Thanks!

N9YFK

A Special report from Andy Jarema
Support Fund Administrator

"Newsline support fund administrator, with some very bad news. My job is to make sure that the bills get paid, and I'm here to tell you that I'm about to pull the plug. Pull the plug on over 19 years of responsible, up to the minute reporting of the news that matters to you, the radio amateur.
There's been a fleet of caring amateurs, just like you, bringing you the news as it happens. As amateurs, we're committed to the concept of bringing you that news voluntarily, without monetary compensation."
"Many of you have stepped up to the plate to help us, and we appreciate every effort. But the sad fact is that it takes an average of $1000 per month to keep Newsline on the air, with the online services, long distance to get the voices of the news when it happens, phone lines for the news feeds, postage services, and the like. For the past two years, voluntary contributions have averaged less than $500 per month. I don't have to ask you to do the math."
"How many amateur radio clubs are there in the U.S., or in the many other countries where Newsline is heard, or even more where it is now read and heard on the Internet? If each club would contribute just $50 to $100 a year to keep Newsline on the air, you would achieve the goal of keeping the latest amateur radio news flowing to you."
"As an MBA, and a CPA, and owning, building, then selling my own business, I don't like losing propositions. You've heard hams refer to "hitting the Big Switch". Newsline report number 1000, on October 11th will be our last newscast, unless you help now in a major way. We have no choice."

"Again, our address:

I have no idea what it could be here, but I would be careful before
ruling
out such things as ABS. I own a 96 Chevy S-10, and the manual says that
the ABS goes through an initial check, and it also goes through various
checks as you are driving (I seem to recall something about a check
after
you pass 8MPH for instance). The way it sounded, the system is
constantly
being checked, not just on start-up...

>Does that mean you actually OPERATE on CW in the novice CW bands Carl,
>or does that mean you could if you wanted to ?
>

Jim,

I could if I wanted to, but I don't ('cause I don't want to).
Also, I presently live in an apartment complex, and HF antennae would be
difficult (but not an insurmountable obstacle ... just not worth the
hassle for 40m CW). My interests lean more towards design and expermentation
(both professionally and as a ham), not towards the olde-fashioned (I'm
not interested in collecting antique radios with tubes, either) .

I HAVE operated CW in the novice/tech bands, but found it boring and
unsatisfying, even when I could copy nearly 20 wpm in my head (my first
callsign was WT6NAB, an STA issued in 1975 for 6 months, then renewed
for 6 months more as the FCC tried to resolve a SNAFU that lost my
paperwork for an extended period of time) ... worked a lot of
extra-class prefix hunters on 40cw, I did ...

Does that answer your question to your satisfaction?

Ok Phil,

Places to start looking. Where is your coax running. It it next to any wire bundles? How do you have the power to the radio connected? Plastic cars mean little to no sheilding and it's hard to find a GOOD RF ground.

One thing that helped me out was to not use the fuse box for a electrical connection. A small hold drilled into the firewall and a tube of RTV will solve that one. Get a direct line to the battery.

When I installed my 2350 the first time I only ran my positive line to the battery and grounded to the frame of the car. BIG BIG BIG mistake. I had RF in the car's electronics and car noise in my radio. You will have to look for a run that dose not cross any other wire bundle. This includes fuel system control lines, A/C, ABS, and transmission computer control lines. Coax is the same way.

BTW I never got rid of the noise or RF problems in my Saturn. A factory rep blasted me and several others in this newsgroup. He did not like a negative tone, or anything negative said about Saturns. I got a Nissan. I have gotten better preformance from that car in many more ways than my old Saturn. Nissan has a ham radio kit for their car. It's one of the best installations I have had in a car. Not any noise

at all.

What part of this surprises anyone?

>
>The bottom line is that the no-code people probably shouldn't go shopping
>for HF rigs any time soon.
>

Don't bet on it ...

>The ARRL is the U.S. representative to the IARU, so not being a member
>shuts one out from being able to be represented.
>

Hell, for years I've had NO delusions that the ARRL was representing me
.. like most (I believe) I only pay the dues because it's the only way
to get QST ... if there were a decent ham magazine alternative available
I'd drop the ARRL like a hot rock.

>That's another point that invalidates the survey. Why should you pay your
>money and be a member if they're going to poll you and get your opinion in
>forumlating policy anyway? Again, the chartering resolution (below) does
>not give the WRC-99 Planning Committee any authority to survey outside teh
>membership.
>

The point is that the ARRL and its membership (even if you count the majority who really just "subscribe to QST" as "members") are a very modest minority of the licensed ham radio operators. Actually, I think they've got a lot of huevos passing themselves off as the "spokesman for the ham community at large" ...

It's damned time that they considered the views of non-members (and even non-ham wannabes) in formulating "policy" that ends up being presented to the FCC as "the will of the nation's hams."

Actually, I think it's time for someone to organize an alternative national organization to gather member views, formulate ideas for the future of ham radio, and present input to the FCC that is more accurately representative of the views and desires of the true majority of hams (and even, perhaps as a separate category, an encouraged participation by currently-non-ham wannabes).

Maybe I'll float the proposal here on the net ... what do you think?

54% is a higher number when compared against the number of hams that build their own gear (soldering on connectors is not "building" ones own gear).

>I simply do not believe these numbers ... let's face it, the majority of
>the ARRL "leadership" are olde farts and I simply don't trust them not
>to rig the numbers.

The ARRL is a life-support system for a bunch of people so they don't have to go get real jobs. I believe their motivation is one thing, and one thing only: money. The no-code VHF license was a money-making opportunity in more than one way (more subscribers, more item sales, etc.)

If a codeless HF license is a money-making proposition (and I believe it is), then you can get your bottom dollar the ARRL will support it.

>The point is that the ARRL and its membership (even if you count the
>majority who really just "subscribe to QST" as "members") are a very
>modest minority of the licensed ham radio operators. Actually, I think
>they've got a lot of huevos passing themselves off as the "spokesman for
>the ham community at large" ...

The fact remains that they are the largest single ham radio organization in the United States, and so by definition is the "voice of amateurs" whether we like it or not.

>It's damned time that they considered the views of non-members (and even
>non-ham wannabes) in formulating "policy" that ends up being presented
>to the FCC as "the will of the nation's hams."

Thats a nice thought, but impractical. That's one reason why the United States isn't a democracy, but instead a representative republic.

>Actually, I think it's time for someone to organize an alternative
>national organization to gather member views

Call W5YI. He's been trying it for years. Of course, in my opinion, he's even slimier than the ARRL is. His attempt to scam people out of $5 to "renew" their amateur radio licenses was perhaps the single largest example of why "scum-bag" immediately comes to mind when people mention that callsign to me.

The ARRL does "recognize and actively support" this kind of community service through the ARRL Letter which it publishes weekly. I gain lots of information from both publications. I would hope we could find a way to support both.

Here in California where pursuits are as common as routine traffic stops, there are a pair of frequencies used called CLEMARS. It stands for California Law Enforment Mutual Aid Radio System. It is VHF and there is daily traffic on the frequencies.

>>I have an Icom R-7000 that I don't think works above 1 Ghz.

There is a relay in the R7000 that switches in a 1 GHz downconverter when you select that frequency range.

In fact, there are a LOT of relays in the R7000. I have had problems with them becoming intermittent.

If your 1 GHz relay were to have dirty contacts, you would not be able to use that frequency range. Cleaning them is difficult, but sometimes you can get the contacts to clean up by cycling the relay a number of times.

I think GPS signals are too wide (they are spread spectrum) for you to hear anything, but you should be able to hear digital crud from aircraft transponders around 1100 MHz if your converter is working. And there's other stuff up there too, even in the ham band.

What does the noise sound like? The only engine related system I can think of that might still be operating after the engine is off would be the oil pressure monitoring system. It takes a few seconds for oil pressure to drop to zero after the engine is shut off. The sensor can make a buzzing or clicking noise. Power to the sender is usually cut by turning off the ignition switch, though, so that doesn't seem likely either.

>are General Electric Mastr Series Base Station/Repeater commercial
>equipment. They are high performance receivers with GaAsFET
>pre-amps & continous duty transmitters all using pas/reject duplexers.

Hi again, Johnboy,
Let's see, I believe you might not have closely read what I wrote:
"... practically any xcvr can be made into a crude rptr" - that was
supposed to indicate that those proud folks who brag of owning a rptr
don't necessarily possess any special skills.

>By the way you are an IDIOT because I do se my name & callsign
>on my internet entries.

Big lie, Johnny. Your disguised posts under the phoney address
suprise2@where2.edu contained no name nor callsign. Not nice to
swear at folks and not have the guts to sign your name or use
a valid address. But after having brought that to the net's
attention a week or two ago I see you're now including a name
and call. Good boy. You learn quickly! But the address is still
phoney. Bad boy.

>IF you were really a ham you would know that all you need is a callsign
>to get someone's address so you don't need to liist an address in
>every entry.

But Johnster, you first need to provide a callsign. When you called
Burt some filthy names you didn't provide a name nor call nor
valid address. Bad boy. Shame on you.

>Sounds like you are bootlegging on ham radio.

Now Johnjohn, your batteries are still in backwards. You bootlegged
on Netnews and got caught. Bad boy.

By the way, I've gotten some emails regarding you. Is there any truth to you having started out as a jammer, and when you were finally kicked off all the Portland rptrs, you had to install your own in order to have folks to talk to? Very very bad boy.

73 from lovely Hawaii,
Jeff KH2PZ / KH6

>
>30m 10.1-10.15 MHz RTTY/data

I know you feel a disgust towards CW, but intentionally leaving
it out as a 30M mode is rather silly. "Data" does not include
CW as outlined in the ARRL Handbook: "Data, telemetry and telecommand
are identified by D as the third symbol of the emission designator..."
The emission symbol for Morse is A1A, not A1D.

>Note, the 30m band is shared with the international fixed radio
>service and amateurs are not permitted to interfere with fixed
>service stations.

Thus, the maximum power on 30M is 200W PEP output.

>17m 18.068-18.110 MHz RTTY/data

>Well I wouldnt call it a "flaw"...I think what you mean is "unacceptable". And
>it should be noted, that referes to you...not necessarily anyone else.

I don't want to argue semantics. Sure, you can say that your radio
isn't flawed, it just isn't as good as that Dana Myers says it should
be, but that's just Dana Myers for you. If that makes you feel
better, fine. The fact is, a TXD of 250mS on 9600 is a flaw, and that
isn't just my opinion.

>>250mS? I won't use a radio that requires that much
>>TXD on 1k2.
>
>Fine...again...those are your standards, and you should be comended for keeping
>such high standards, but the fact is...most folks use 200 to 350ms TXD @ 1200
>bps.

Most folks? Most folks I know are using less than 70mS. Maybe most
folks you know are using flawed radios, too. 50mS TXD for 9600 baud
is not a high standard.

>>The problem is that a radio with that much delay
>>contributes significantly to hidden transmitter syndrome, *even on

>are correct about the collisions, however, collisions can happen even with
>rigs set at 50ms.

Of course collisions can happen with rigs set at 50mS. In fact, collisions
can happen with rigs that have a TXD of under 5mS. The probability of
a collision is increased with increased transmit delay time.

>>Also, the receiver recovery time means that you'll probably miss
>>rapid replies, they'll timeout and retry before you get the
>>frame.
>
>True, but I have not experienced that problem. Granted there are not a lot of

>retries.

Well, if everyone in your area is running 250-300mS TXD, I doubt you'll
see replies quickly enough for your receiver to miss them. How
do you actually know your operation has been solid with no retries
by other stations?

>>This won't happen if other stations are
>>running similarly>long TXDs, but then you're really throwing away the 9k6
>>advantage>(a 256 byte frame doesn't take much more than 250mS to send; so

>paragraph per transmission. The difference between 1200 and 9.6 on my station
>is obvious.

Sure, using large block sizes reduces the overhead. Using a radio
with an appropriate TXD is even better. Radios slow to key up
on frequency increase the odds of collision, and the longer frames
increase the impact of a collision when it happens.

>>Um, save up your cash (under $150 for a clean Mitrek and rocks) and get
>>a radio that switches in 50mS (or less) and you (and all the others on

>someone who is trying to move ahead...regardless of their equipment.

You're taking this far too personally. Did I criticize you? No. I
pointed out some of the problems with using a PLL radio for 9600 baud.

I guess, Jeff, the fact that CW is allowed on all amateur
allocations doesn't matter to you? I mean, there are
no frequencies where CW is prohibited, so there's
no need to explicitly mention it is allowed.

As a gate, CW/morse, is as universally fair(or unfair) as one can get.

But, if one agrees that some sort of gate is needed then what better
than morse. There is even a work around in place for those who can not
learn it.

IMHO ones respect for a priviledge is proportional to the work required
to obtain it.

[stuff deleted]
:
: CW is alive, well, and thriving. In fact, the demand for QRP CW
: transceivers alone has almost single handedly revived the kit industry.
: Just open your eyes and ears and it'll become apparent.
:
: This has nothing to do with the so-called debate about Morse testing, but
: it does have to do with correcting your implication that there is little
: CW activity when in fact there is. You may believe that's the case, or
: perhaps you might even WISH it were, but quite simply, it isn't.

If someone wants to operate CW then let them, the proposed changes does
not ban CW, it's only talking about dropping the requirement. I know the
code but I havn't used it in years and have no plans on using it again (except
maybe if I get in a 'nostalgic' mood and pretend it's the 1800's again).
If someone wants some kind of requirement for this hobby then how about
a voice and operating procedure test before people are allowed to get on
using voice, ever listen to HF SSB or FM repeaters lately? CW is disciplined
by it's inefficiency and requiring very short phrases and abbreviations to
communicate reliably. Voice (and packet) doesn't have that problem, and that's
where we need to teach people to use proper operating procedures to make
this hobby better. Keeping a CW requirement is only going to keep people
away from amateur radio.

I have a TR-2600, and I was interested in knowing why it always had a
'click' on the transmitted audio at keyup time. I noticed the click
was audible on nearby frequencies, too, and suspected the PLL
settling was to blame.

So, I connected the discriminator output of a test receiver to a scope
and tuned it 100KHz away from the HT's transmit frequency. Guess what?
I could clearly see the HT sweeping through the passband on key-up.

So I tuned 200KHz away. Same thing.

I estimated the HT was swinging about 300KHz on the initial overshoot.

That's a lot.

Interestingly enough, the PLL in the TR-2600 does have a lock detect -
it just isn't very picky about how locked the PLL is. It is really there
to avoid transmitting when the PLL is completely failed.

The sweeping PLL plagues most early PLL radios. We have a documented
case in New England where a TR-2400 (early Kenwood PLL handheld) trashed
a node 20 miles away every time it transmitted. I have seen a PLL sweep
across a channel 300 KHz away 3 times during the pre-lock period.
Fortunately most modern PLL radios do not transmit until the PLL is
locked. That creates another problem. When a radio has a delayed power
out period, nobody else on the channel will know that it has started it
TX sequence. Result a collision, either yours or somebody else's. Read
my article on "Key-up HTS" at http://www.cam.org/~dino/neda/HTSDUAL.html

>
> With the deviation set correctly (3.0), it does not sweep outside the 5khz
> limit,

Deviation is not the problem, it is the PLL sweeping across the band before locking up. Such a moving signal if it is being transmitted at significant power will punch holes into frames on any channel within RF range. It only takes 0.1 ms of hole to completely trash a frame. See above for documented case.

> but I agree that "long" TXDs affect channel effeciency.

They sure do. What is the point of sending 250 ms of flags and a 15 ms ACK frame? That is a lot longer than a 20 ms TXD "fast" rig with a 120 ms ACK frame at 1200 bps. I suppose if you send a long enough TXD period then everyone else will have given up and you have a clear shot at the channel. :-)

>
> >You share the channel with everyone else, so you should be considerate.
>
> I run the same TXD as most users on the freq.

You should be running the minimum TXD that your radio and the radio at the other end of the link require. That would reduce the surplus flags being sent on the channel and reduce the chance of a collision with a HTS station.

BTW the Flexnet system being used in Europe has an interesting feature. The node measures the length of TXD transmission it can hear from you and if it hears more than 100 ms it will send you a msg indicating you have your TXD set too high. It then refuses further data from you. You only need enough flags so that the station at the other end of your link can catch the start of the data frame.

> >>Other than that...I like it very much, and it works well.

Ignorance is Bliss!!!! And no excuse for running inadequite radios on the network.

>
> >You have not tested it. How would you know?

For test methods to check switching speed of radios, try http://www.rocler.qc.ca/burt/drstm.html

>
> It works well in the regard of solid connects, and no retries with other
> stations, and when on the 9.6k repeater, results are the same.

Anyone who says that he has NO collisions on a channel must either:
A/ Be transmitting UNPROTO frame alone on the channel or
B/ Be so strong into the server that he overrides everyone else on the channel or
C/ Would not know a collision if it hit him in broad daylight in the middle of the highway.

Any communications involving 2 or more stations on a CSMA channel will encounter collisions. Just like the only 2 cars registered in the whole

state of Ohio in 1905 that had a collision one day. I presume that you mean you have very few collisions. If so, say it. Give it some numbers like 5%, 10% or whatever. More likely if you are not having collisions then others on the channel are due to your signal.

>>Kenwood just doesn't happen to be one of them.
>
>My Kenwood is running right now...as we speak...at 9.6k. :)

I've never claimed that your Kenwood can't spew bits at 9600 baud.
What I've claimed is that your Kenwood is not suitable for 9600 baud
operation because of the excessively long TXD value you claim to use.

>>>BTW, that was the setting for duplex operation. I can run 100ms in simplex.
>
>>Are you saying there's a local duplex repeater that requires an
>>extra 150mS of TXD? That repeater is quite broken.
>
>No.

You've said you use 250mS TXD when operating through a duplex repeater, but
that you only use 100mS in simplex operation. Why do you use the longer
TXD when operating via a repeater?

>
>>Um, if that repeater you're using requires 150mS of extra TXD, it
>>is flawed.
>
>Er...I dont know where you got this idea.

I can do math - you said "250mS on the repeater, 100mS on simplex".

250-100 = 150.

>>>That may be true, but the average TXD in my neck of the woods is much higher.
>
>>In other words, most everyone you know is using flawed radios and
>>doesn't realize (or accept) it.
>
>No. And Im not sure why you continue to make rash assumptions.

You've said you use a TXD of 250mS and that everyone else uses a similar
TXD. That's broken at 9600 baud.

>>That doesn't change the fact - these
>>people are using excessive TXD.
>
>As always...your opinion is welcome Dana. :)

It isn't just my opinion, Chris. Ask someone like Kantor or Janssen
or Coffman (you know, other people with networking and packet experience).
The answer won't be that different.

1843. Iambic Keyer, ONLY FOUR PARTS!

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-29 00:00:00 UTC
From: Rick Miller <rdmiller@execpc.com>
Message-ID: <01bb95da$a08fac00$060801c1@eng06.digalogsys.com>
Source record: 217910
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc
Body handling: Inline uuencoded payload not displayed: pickeyer.c

Hi all!

I posted last week to rec.radio.amateur.misc that I would be
trying to implement an iambic keyer with a Microchip PIC16F84...

Well, I've actually got a demo up and running! This is too fun.

It's menu-driven, even! You can adjust sending speed and the pitch
of the audible feedback tone. You can even adjust the speed and
pitch of the menu-Morse.

Parts list:
(1) PIC16F84 (used to be called "PIC16C84A")
(1) ColorBurst crystal (3579.545 kHz)
(2) 22pF capacitors
(1) Normally-Open momentary push-button (optional)

Well, okay... this assumes that you've got a power supply
of 2-6 Volts DC available, since it's meant to be built right
into your rig. Typical operating current is under 10 mA.

If you throw in the 'optional' pushbutton, you can reset it
into 'menu-mode' without power-cycling your rig.

As promised, here's the source code so far.

Enjoy!

Rick Miller (KB9OBN) rdmiller@execpc.com

> related to amateur radio.

As a "practical examination" related to amateur radio, CW prociciency is unfit. It has nothing to do with radio operation, per se. Indeed, Morse can be communicated without any RF activity whatsoever. Arguing that it is related to amateur radio and is therefore a good test is as absurd as arguing that operating a TCP/IP router is a good test. Both CAN be done via radio, but neither IS radio operation.

Try again.

Might be a worthwhile question if either it was something in dispute
or was even something that Gary suggested. He didn't say what
class could operate on what allocations. He merely pointed out the
relevent portion of the FCC regulations regarding mode specific
allocations. But then again Jim, you knew that and I suspect are
just being argumentative.

>that ny setup works flawlessly with its given settings. Now those SETTING
>may be "unaceptable" to you (and others), but I was simply answering the
>persons question...which is YES...there ARE PLL radio that will work at
>9.6k.

Sure, there ARE PLL radios that are acceptable for 9600 baud. Your
Kenwood just doesn't happen to be one of them.

A short analogy:

If you had a car that could only maintain a top speed of 35MPH, would
it be a good idea to driver on the 70MPH interstate? I guess if
everyone is driving 35MPH on the interstate, it wouldn't matter.

>BTW, that was the setting for duplex operation. I can run 100ms in simplex.

Are you saying there's a local duplex repeater that requires an
extra 150mS of TXD? That repeater is quite broken.

>>Most folks? Most folks I know are using less than 70mS. Maybe most
>>folks you know are using flawed radios, too.
>
>No...I know of no one on packet that is useing a flawed radio.

Um, if that repeater you're using requires 150mS of extra TXD, it
is flawed.

>>50mS TXD for 9600 baud
>>is not a high standard.
>
>That may be true, but the average TXD in my neck of the woods is much higher.

In other words, most everyone you know is using flawed radios and
doesn't realize (or accept) it. That doesn't change the fact - these

people are using excessive TXD.

>>Well, if everyone in your area is running 250-300mS TXD, I doubt you'll
>>see replies quickly enough for your receiver to miss them. How
>>do you actually know your operation has been solid with no retries
>>by other stations?
>
>By monitoring the frequency of course.

Which receiver are you using to monitor the frequency? Do you have
a separate receiver set up with monitoring software (like AXMON?).
You can't use your station receiver for this kind of monitoring
since it won't hear the packets being dropped that are later
retried.

>>No. I
>>pointed out some of the problems with using a PLL radio for 9600 baud.
>
>And I answered the guys question which was "...if there are any PLL sets
>that are satisfactory?" The answer was yes...and I also added some information
>and settings so he could get the whole picture, as not to cloud the issue.

There are PLL radios that are satisfactory, but then you added some
information and settings which clearly indicated the one you're using
is *not* satisfactory but you use it anyway. Then you explained that
everyone else in your area is using unsatisfactory radios.

Unfortunately I see the thing the same way .... It seems to still be a major project to get on or above 9600.... Go into a ham radio store, and see what they have on the shelf... still the same stuff pretty much, if you want higher speeds , you often have to modify or build equipment to do it.
And once you get on , 3/4 of the software is geared towards 'BBS' stuff...

Remember that from the 70's ?

On a side note , occasionally I pick up a copy of '73' magazine. In there the editor , Wayne Green I think his name is, often chews out the community on the lack of progress. Funny thing is, there is no e-mail address that I could find for feedback , and he still calls the packet section in 73 "RTTY loop".

RTTY ? maybe he should call it something more progressive. RTTY is the morse code of packet, and certainly does not attract a lot of excitement with people that have been jaded by the World Wide Web.

>Can anyone recommend a brand of 70cm radio from any of the major
>ham-radio manufacturers that is really suitable for 9600 baud packet? I
>wonder if there are any PLL sets that are satisfactory?

There is *one*, Tony. It is the Azden PCS9600D. However, I can't
recomend it since Azden has a horrible reputation for poor reliability
and lack of factory support. The Icom IC820H almost makes it, but the
receive filters are too narrow. If you can fit wider filters, it may
suffice. (It's not that 9600 is wide, it is just that filters are phase
non-linear near the passband edges and that distorts the signal and
closes the eye. The cheap way to fix that is to use a wider filter so
the signal doesn't approach the passband edges. The expensive way is
with an adaptive equalizer.)

Otherwise I suggest you stick with a crystal controlled data radio
like the TEKK KS900. It works fine, and costs very little (under
$150 crystalled to your frequency). It is rare to need frequency
agility in a data radio anyway. The proper way to configure a
network leaves your radio on a single known frequency 7x24 so
that the network routing software knows where to find it when
there is traffic for your station.

I lost an HT that was insured under the ARRL insurance
carrier. They were very prompt. I mailed them a copy of the police
report and they got the check right back out for the insured amount
minus the $50 deductible.

I would highly recommend them.

Sure! In Winnipeg there are several hams using 6-ch. Motorola
HT600s(Radius P200) and 8/16 ch. Motorola Radius GP300s, for both 2m,
and 70cm bands. In fact with the right models in the VHF band there are
EMS and FF hams in rural areas who have programmed (and are licenced
for) the Province-wide EMS common freq, and/or Provincial Fire freq.s as
well as 2m simplex/repeater freq. These responders have found that
these radios are great for use when you are "on-call" in a rural area.
And as they are type-accepted for commercial use they can be lic. for
the ham bandsas well. In fact there is one volunteer agency that
has Motorola Radius GM300 as vehicle radios, with 2m programmed in, but
these channels are restricted to lic. AROs.

The ARRL Letter
Electronic Update
August 30, 1996

IN THIS UPDATE . . .

* New ham satellite to be Fuji OSCAR 29
* Current FCC Form 610 is still good
* Ham astronauts to train for Mir missions
* New ARRL Scout Handbook available
* New Friends encourages ham radio for hearing impaired youth
* ARRL/TAPR confab is September 20-22.
* In Brief: Avoiding vanity confusion;
SAREX flight set; are they hams?;
QSL the QSLs; media play; vanity tally

NEWEST HAM RADIO SATELLITE TO BE FUJI OSCAR 29

JARL plans to ask that its new JAS-2 satellite be designated as Fuji OSCAR 29, or FO-29 for short. This is in line with previous Japanese amateur satellites FO-12, launched in 1986, and FO-20, launched in 1990 and still operating. AMSAT-NA President Bill Tynan, W3XO, says that, in the light of this information, it is appropriate to refer to the new amateur satellite as Fuji OSCAR 29, or simply as FO-29.

Meanwhile, operation of the new Amateur Radio satellite appears to be normal. It will be a couple of weeks until for the JD transponder is ready for use, however. The CW telemetry beacon is being heard at many locations. The mail box is now experimentally open for public use. Send any downloaded telemetry frames to jamsat-bb@iijnet.or.jp. Jerry Smyth, N8ULU, reports the satellite has been operational on mode JA and that he worked several stations. He reported good signals with typical LEO fades from time to time.--AMSAT News Service

CURRENT FCC FORM 610 IS STILL GOOD

Unlike the expiration dates on perishable food items in the grocery store, the expiration dates on the FCC Form 610 can be safely ignored. A lot of hams have asked about them, however, because an "expiration date" of August 31, 1996, appears in the upper righthand corner of current FCC Forms 610 that were issued in November 1993 and in March 1995 (as shown in the lower righthand corner).

ARRL/VEC Manager Bart Jahnke, KB9NM, says the August 31, 1996, expiration date is an internal FCC reference date only, and it is not a date to instruct the public when to stop using the form.

The FCC says the November 1993 and March 1995-issued FCC Forms 610 are okay to use and will continue to be acceptable for use until further notice.

HAM ASTRONAUTS LAWRENCE AND WOLF TO TRAIN FOR MIR MISSIONS

Astronauts Wendy B. Lawrence, KC5KII, and David A. Wolf, KC5VPF, have been selected to train for stays aboard Russia's Mir space station. They were scheduled to arrive at the Gagarin Cosmonaut Training Center in Star City, Russia, in mid-August. Lawrence, 37, is a US Navy commander. She'll begin a four-month stay on Mir in September 1997. She will launch aboard Atlantis as part of the STS-86 crew, and become a member of the Mir 24 crew, which will be replaced by the Mir 25 crew during Lawrence's tour on the Mir.

Wolf, 40, will replace Lawrence on Mir, arriving aboard Discovery during the STS-89 mission, currently targeted for early 1998. Wolf, a medical doctor, will be a member of both the Mir 25 and 26 crews during his four-month tour in orbit.

NEW ARRL SCOUT HANDBOOK AVAILABLE

The ARRL Educational Activities Department has published a new booklet, the ARRL Scout Handbook, for use with Boy Scouts and Girl Scouts. The book is about Scouting and Amateur Radio and is available free from EAD. Send an 8-1/2x11-inch self-addressed, stamped envelope (SASE) with 78 cents of postage, to ARRL, Educational Activities Department, 225 Main St, Newington, CT 06111.

The booklet includes information on the Boy Scout Radio merit badge and tells how to become a Boy Scout Radio merit badge counselor. It also has a suggested proposal for a Girl Scouts Amateur Radio Patch. Other sections explain how to get involved with the annual Boy Scouts Jamboree on the Air (JOTA), which will be October 19-20, 1996, as well as general information on ham radio and ideas on how to recruit Scouts to Amateur Radio.

The ARRL Scout Handbook was made possible through contributions from generous hams like yourself through a grant from The ARRL Foundation. Please consider a donation to the ARRL Scout Handbook Fund to make future booklets possible. Every tax-deductible contribution helps, regardless of the amount. Send contributions to The ARRL Scout Handbook Fund, The ARRL Foundation Inc, 225 Main St, Newington, CT 06111. The ARRL Foundation is a not-for-profit, tax-exempt 501(c)(3) organization. Contributions are tax-deductible to the extend permitted by the IRS.--Glenn Swanson, KB1GW

ENCOURAGING DEAF YOUNGSTERS TO GET INTO AMATEUR RADIO

John Rothert, KC4IYO, of Orlando, Florida, reports he's working with a group of deaf students in central Florida called "New Friends," a nonprofit organization for deaf and hearing impaired children. The function of the organization is to provide an atmosphere where deaf children can meet to socialize and share learning experiences.

Amateur Radio offers several modes that are accessible to those with hearing impairments, including RTTY, AMTOR, packet, PACTOR, TV and even CW. Rothert says he's been involved with the Shuttle Amateur Radio EXperiment (SAREX) program since STS-35, and he hopes to see New Friends get in on the fun. Last year, the group submitted an application to ARRL and the SAREX community to schedule a packet contact during a future mission. NASA is said to be interested in this project, and the group may get its chance on a future mission.

Rothert said some of the group's objectives are to learn about space science, show how computers can help people communicate, learn about the Internet, spark interest in ham radio, and communicate with the space shuttle. During the first official New Friends workshop in late July (sponsored in part by Sprint and the Carl Hill Galloway Chapter of the Telephone Pioneers) some 25 students found out what Amateur Radio is all about. Each student received a packet of information from the ARRL along with an Archie ham radio comic book and a copy of the Shuttle Amateur Radio EXperiment Bulletin put together by AMSAT and the ARRL. Amateur Radio operators demonstrated voice transmission and packet via ham radio and showed how to track the shuttle and other spacecraft. Participants also had a hands-on opportunity to try packet. A table was set up for students to write letters to the astronauts.

The Lake Monroe Amateur Radio Society has volunteered to give Amateur Radio classes designed for the hearing impaired, and several students have already signed up. Rothert would like to get in touch with deaf and hearing impaired hams. He's also looking for any ideas that may help make Amateur Radio more exciting and inviting for these young people. His address is 14131 Hunter Grove Dr, Orlando, FL 32828--AMSAT News Service

1996 ARRL AND TAPR DIGITAL COMMUNICATIONS CONFERENCE IS SEPTEMBER 20-22

The fifteenth annual ARRL and TAPR Digital Communications Conference is almost here, but there's still time to register. The 1996 event is September 20-22 in Seattle, Washington, just minutes away from the SeaTac (Seattle/Tacoma) Airport.

Participants can expect a conference that's both technically stimulating and a weekend of fun for all who have a more-than-casual interest in any of the ham digital communication modes. The ARRL and TAPR Digital Communications Conference is for all levels of digital operators, and a must to attend for those who want to get active on a national level. But it's not just for digital experts. This year's conference will again provide an entire morning of beginning- and intermediate-level presentations on selected digital communication topics. These include APRS, satellite communication, TCP/IP, digital radio, spread spectrum and others.

In addition to the presentation of papers on Friday and Saturday, three workshops will be held. Keith Sproul, WU2Z, will discuss APRS packet-location software. Dewayne Hendricks, WA8DZP, will conduct a workshop, "How to Utilize Part 15 Wireless Radios for Ham Applications." Another Sunday workshop will focus on "Wireless Networking Using the WA4DSY 56-K RF Modem Technology."

For full information on the conference and accommodations, contact Tucson Amateur Packet Radio, 8987-309 E Tanque Verde Rd No 337, Tucson, AZ 85749-9399, tel 817-383-0000; fax 817-566-2544; e-mail tapr@tapr.org; Web page www.tapr.org. Abstracts of all conference papers are now available on the TAPR web page.

The conference hotel is the Quality Inn Seattle Airport, 17101 Pacific Hwy South, Seattle, WA 98188; tel 206-246-7000; fax 206-246-1715. The alternate hotel is the Radisson Hotel Seattle Airport, 17101 Pacific Hwy South, Seattle, WA 98188; tel 206-244-6000; fax 206-246-6835. When making reservations, be sure to indicate you are attending the ARRL and TAPR DCC conference. The hotel provides transportation to and from SeaTac Airport. Contact the hotel to arrange airport transportation.

Conference cohosts are the Puget Sound Amateur Radio TCP/IP Group and Boeing Employees Amateur Radio Society (BEARS).

In Brief:

* Avoiding vanity confusion: Some hams have questioned the application requirements contained in the recent FCC announcement that vanity call sign Gate 2 opens September 23. The confusion arose over the FCC's statement that "each call sign must be one designated for the Region of your mailing address." FCC Fact Sheet PR-5000, Amateur Station Sequential Call Sign System, defines the regions and the types of call signs you may properly select. Briefly, here's how it works: Those living anywhere that the FCC issues ham licenses (all 50 states plus US territories and possessions) may apply for a call sign from any of the 10 call districts (regions 1 to 10). This means a ham in Missouri, for example, could apply for a call sign with a K1 prefix. He or she would not be restricted to a call sign containing a numeral 0. In addition to regions 1 to 10, applicants with mailing addresses in Alaska also may apply for call signs from region 11, while hams in Hawaii also may apply for call signs from region 13 having a numeral 6 or 7 in the call sign. See Fact Sheet PR-5000 for additional information.

* SAREX flight set: The next SAREX flight, STS-79, is set to launch September 12. John Blaha, KC5TZQ, will be delivered to the Mir space complex for a long-duration mission. While on board, he'll share Mir duties with Cosmonaut Aleksandr Kaleri, U8MIR, who first used that call sign in 1992; plus Valerij Korzun who'll use the R0MIR club call sign, and Claudi Andre-Dechays, using F6MIR. Mir astronauts get audio linkups with their families every week and video linkups every two weeks. Family members report that the video doesn't work half the time, and the audio, while acceptable, has bad echoes and isn't as good as ham radio!--Rosalie White, WA1STO

* Are they hams? The title of rock group Pearl Jam's latest album is No Code.

* QSL the QSLs: Hams from all over have showered QSLs upon DeKalb County, Georgia, police officer Dave Harvey, KE4VDP, who was recently shot and wounded while on the job. Harvey's friend and colleague, Jim Sheppard, KT4FD, reports the recovering officer--a Technician licensee for about 18

months--has received more than 150 cards--26 on one day alone--in the wake of a recent report in The ARRL Letter requesting that hams send cards to Harvey to cheer him up. One card even showed up from Pakistan! "He really has enjoyed getting the cards, and it has had a great effect on cheering him up," said Sheppard, who recently put up a 2-meter antenna for Harvey so he could keep in touch with his friends from his house.

* Media play: Past ARRL Professional Teacher of the Year Sheila Perry, N0UOP, of Bloomfield, Missouri, was featured in the August edition of Learning magazine (a journal for teachers). The article highlighted her SAREX work and cited ARRL's Educational Activities Department as the place to get more information.

* Vanity tally: As it prepares to handle the expected deluge of applications when vanity Gate 2 opens September 23, the FCC reports it had received nearly 3800 Gate 1 and Gate 1A vanity call sign applications for processing as of August 20, 1996.

To: K1OIK

AA0NN said:
I heard second - hand that I just received the dubious honor of receiving my first flame...public flame, no less. I had to take a peek.

The reason you did not see it first hand is ham radio is very chancey, and unreliable.

AA0NN said:
Let me clear up some misconceptions you have. Before I do, first I have to admit you are correct in saying that I didn't like your bulletin about what makes a loser. But, to be more specific, I was offended. I seem to remember something about promoting international goodwill with amateur radio.

Promoting good will is great but that does not mean we only have to be positive. Do you think happy talk allows a MEANINGFUL exchange?

AA0NN said:
I forward bulletins from my residence in Anchorage, Alaska to Whitehorse, Yukon Territory. With that in mind, I think your bulletin perpetuates the "Ugly American" persona that many foreigners have come to take as their own opinion.

I was married in Kotzebue, the real Alaska. My message promotes dialogue, your attitude about messages promotes boredom. You think I am the "ugly American" well your censoring makes you a typical Communist dictator.

AA0NN said:
I'm curious why you consider someone a loser if they cheat on their spouse MORE than once. Interesting. It was a passing thought, that's all. Maybe so you don't count yourself in the grouping? Cheating once is okay, but not more?

People make mistakes, once is a mistake, albeit a bad one. Doing it twice means you are a loser. Once is NOT OK.

AA0NN said:
And who voted you in as the authority to determine what characteristics make someone a winner or a loser?

Where did I claim authority. It is my opinion.

AA0NN said:
I don't care whether you post yourstuff or not. I'm not trying to control

the whole world...I just want to keep my little part of it free of (again, only my humble opinion) trash like yours. Therefore, I am putting you on my LID list to reject anything that comes from you in the future.

Yes you are CONTROLLING. You are "protecting" hams from differing opinions. You are trying to play GOD. I doubt you are God. If you want to blind yourself that is one thing but why do you think hams need to be protected? They can easily NOT read what they do not want. How are you different from a Communist dictator?

AA0NN said:
One last thing my friend....You should read up on the FCC rules and regs. I am fully compliant with Part 97, as well as other sections.

I said you appeared to be in non compliance but in reading your packet address you are in full compliance. I wish I was back in Alaska. Life in the "outside" has its drawbacks. I miss the permenant fund. I miss the bush.

AA0NN said:
Hope you can become a happy person...obviously you're not one.

I am quite happy and has long as you can control you are as well.
Do you have a need to control the weakest of all people (hams) because your spouse has you in control?

Burt

>it. There has to be some introduction and incentive to acquire the skill
>and qualifying for the license has worked just fine for 70-plus years and
>there's no good reason to stop.

Are you sure there aren't incentives to learn CW other than passing the
exam? I know several DXers that sweated the code so they could get
the real Dog-Xray. Even without a 20WPM requirement, they'd have to
get their speed up so the DX will work them.

>You see Bill, rather than trashing something another segment uses and
>enjoys, those of us who derive pleasure from operating CW want to share
>the fun and invite others to join us.

"Sharing the fun" is a little different than insisting other people
pass a CW exam. If you enjoy it, tell your friends. Your joy will be
apparent and they'll want to try it too.

>If I wanted to trash something, it would be that old and truly obsolete
>spectrum wasting 1920's technology that infests the VHF/UHF band: NBFM.
>Why not increase spectrum efficiency five-fold and mandate a change to
>ACSSB?

What *are* you talking about? Who is suggesting that CW (as a mode) be
trashed?

Be careful about starting down this slippery slope - there *are*
digital modes that make more efficient use of spectrum than CW. Suppose
I suggest that CW be trashed in favor Clover? ;-)

I'm a journalist conducting a survey of Internet telephony usage. Whether you use Internet telephony products or you've never heard of Internet telephony, I'd really appreciate it if you could take a few minutes to fill in a questionnaire.

It will be one of the first fully automated email surveys conducted on the internet. The survey will be processed automatically by EFORM, a new automated email processing application, produced by Beach Tech (http://www.beachtech.com, email: sales@beachtech.com). And no, I'm not a Beach Tech employee.

If you *don't* use Internet telephony, or have never heard of Internet telephony, please send a blank email to: IT_NONUSER@BEACHTECH.COM, and a survey, with instructions, will be mailed to you.

If you *do* use Internet telephony, send an email to: IT_USER@BEACHTECH.COM, and a survey, with instructions, will be emailed to you.

Please tell your friends and colleagues about this survey. Details about survey results are attached to the surveys.

Thanks

Date: 1996-08-29 00:00:00 UTC
From: "R. John Glackin" <jglackin@bev.net>
Message-ID: <32258FD0.11F1@bev.net>
Source record: 218027

For Sale to best offer:

Yaesu FT-747GX 200W HF Transceiver w/mic,docs,etc
Astron RS-35M 35 Amp Power Supply
Yaesu FIF 232C CAT Interface

All of it was taken out of the box, setup for a few days, and put back in the box a few years ago. It has been stored since then. I pulled it out the other day and decided I should sell it to someone who would use it. It is in mint condition and works perfectly with all original docs,boxes, etc. The whole thing originally cost just over $1000.

Would be great for a new or old Ham. Just add antenna!

John Glackin

Source record: 218028

Does anyone know how to send "rj" in the old morse as used on railroads etc in the olden golden days?. It meant "qrx whilc I change to a relief operator". Later on long after continental morse had left the picture, the airlines cw operators were still saying "rj" in international morse meaning the same thing "sby while I change to a relief operator".
I cant figure out how "rj" would have any such meaning in international cw.

See my WWW site for available 1x2 & 2x1 calls. http://www.ultranet.com/~bob/

The data was generated with from QRZ data on the Jan 96 CDROM. I'll
update it to the Jun 96 CDROM when I pick one up soon. Dont forget
a call must have been vacated for 2 years before it can be reissued
under the vanity call program, so NEW vacated calls are useless
for the Sept opening of Gate 2 anyway.

Pay attention, won't you. It was suggested that, for lack of anything better (easy to implement in VE setting, etc.) CW was an adequate "practical examination" of radio operating expertise.

Again, CW has nothing to do with radio operation, per se. One may operate a station without CW. Period.

> >that operating a TCP/IP router is a good test. Both CAN be done via radio,

> TCP/IP routers might be appropriate.

And if I don't want to operate TCP/IP on radio, then I DON'T have to demonstrate proficiency in its use. Fine, I can live with that. But you can NOT have it both ways, Michael. The same logic now applies to CW. If I'm not going to use it, I don't have to demonstrate proficiency in it.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 AUGUST AND FORECAST FOR 30 AUGUST - 01 SEPTEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 28 Aug
Daily Proton Fluence >1 MeV: 7.0E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.9E+08 (moderate)
X-ray background: A6.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Aug 31 Aug 01 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Aug: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Active to minor storm

Estimated Indices : A K Observed A Index 28 Aug
Learmonth 24 4454 4332
Fredericksburg 23 17
Planetary 30 14

Observed Kp for 28 Aug: 3333 3343

2B. MAGNETIC FORECAST
Date Ap Conditions
30 Aug 18 Active
31 Aug 13 Unsettled
01 Sep 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 9 was issued on 26 August and
is current for interval 26-30 August. Geomagnetic activity on
29 August believed to be in association with solar coronal hole.
Active levels expected for today then declining.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
29 Aug Normal Normal-fair Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
30 Aug Normal Fair Poor
31 Aug Normal Normal Fair
01 Sep Normal Normal Fair
COMMENT: Degraded high latitude HF comms expected 30 August.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
29 Aug 27

Observed Australian Regional MUFs:
Darwin and Townsville: enhanced by up to 30% local night hours.
Near predicted monthly values during local day.
Sydney : enhanced 15-20% 03-10UT, near predicted monthly values
at other times.
Hobart: near predicted monthly values.

Predicted Monthly T index for August: 9

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
30 Aug 10 near predicted monthly values
31 Aug 10 near predicted monthly values
01 Sep 10 near predicted monthly values
COMMENT: Ionosphere did not become depressed following geomagnetic
disturbance observed overnight. HF conditions are expected to
be fair to poor early on 30 August, slowly improving by the end
of the day.

There are very few at the ARRL who could not walk out tomorrow and make far more money, as many of them do. I would say there have been real sacrifices made so they could work with Amateur Radio. (2.) The No-Code was not a money maker for anybody. They did not buy equipment, the did NOT join the ARRL or subscribe to any other ham mags. (Rare exceptions, of course, but VERY rare.)

Mexico has two ham groups. It is very confusing to the federal govt. For years one group did not want US hams going down and operating fromn there. The other group felt it was OK......that was why for manyyears there was no recip w/ Mexico....Two orgs here would be devisive. Why shoul ham wannabees have a voice?

How are you with batteries? That's about 220 amperes of current
you're talking about pulling from a 12 volt source. A standard
auto battery will last about 30 seconds at that draw. You're going
to need a *serious* alternator on the engine to keep up with that
demand (the stock alternator is 50-65 amps max). Neville makes
a big enough alternator, but it would be cheaper to get a 120 VAC
alternator instead. The copper losses would be much less. The trick
would be holding the engine RPM right to make 60 Hz. In mobile use,
you really need an auxillary engine to do that right. Onan makes
RV generators in that power range.

>signals above 1 Ghz. Works fine below.

Forget about hearing the GPS constellation, Tom. They use spread
spectrum, and the R-7000 will be completely useless for receiving
that. (There's no despread correlator, so the energy you receive
in any bandwidth will be below the noise floor.)

To check if your radio is working, however, just listen for the
3rd harmonic of your 70 cm HT. That should be loud and clear when
you're next to the receiver. It'll only be 60-80 db down from the
fundamental. Remember that deviation multiplies too, so you'll be
listening for a signal with 15 kHz deviation.

If you can't hear that, then you've got receiver problems. The
R-7000 has relay bandswitching, and the relays do get cruddy.
Changing bands several times back and forth tends to clean them
a bit, at least temporarily.

Gary

<Excerpted>:
> "I'm sure the pervious statements are correct ... however, typing in
> real time is not the point".

Wrong. It is the point exactly. REAL-TIME interpersonal communication requires real-time typing (or keying). Buffering up stuff to send in a burst is not real time QSOing. I have run into AM/PACTOR operators who apparently like to just push buttons, and send 'canned' files, give canned responses to questions never asked, include everything but the kitchen sink in "my station is" canned files, AD NAUSEUM. BORING. These seem to be the ops who want to use the "high speed capability" of the "digital modes" (overused word these days). OOK CW is the original "digital mode", and RTTY, another digital (ie, binary keyed) mode have been with us for several decades now. Often, the operator's typing ability limits him to speeds less than 5 wpm! They are attempting to ragchew on the wrong mode. If unable to communicate at a reasonable rate (give the other guy a break, he doesn't have all night), on keyboard or on CW, then stick to 'phone operation, where all you need to do is push a button and speak. Or, (heavens to Betsy!), work on operator skills (typing or CW proficiency) required for the mode of choice. You don't get there by just spending money on equipment; you have to develop operator skills needed to use it effectively!

Bandwidth comparisons of CW to modes often do not take into account the well-known ability of a skilled human operator to decode signals separated by only a few Hz in frequency, and different in amplitude by many dB (including negative sig/noise ratios less than unity). CW ops, especially DXers, do this often.

Ragchewing for me is to engage in extemporaneous conversation as one would on duplex voice or QSK CW. Kick ideas and thoughts back and forth, etc. In other words, talk to a real live human operator on the other end, real time.

1886. Re: Amateur Radio Newsline Financial problems

Newsgroup: rec.radio.amateur.misc

From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JLKxag0.sanderman@delphi.com>
Source record: 218040

Why would you expect the ARRL to favor financially one amateur radio news service over another?

It's amazing it takes so much money to do these things. However, I should point out that our service "This Week in Amateur Radio" provides 50 minutes of amateur radio news and features each week (compared to Newsline's 18 minutes) on a budget of under $100.00 per month! The difference? We deliver our service via satellite. And internet distribution is in the offing! Because of the time frame in which we produce our service, we are often able to beat reportage in Newsline by as much as up to two weeks. Ask our affiliates...!

Just my two cents worth!

CQ has an interesting article this month on engine noise. They say that
many cars are made up of "composite material" (Garbage) and lack a good
gnd plane. That's #1.

#2, check your exhaust system for proper grounding. Lots of time they are
hung from rubber dampners and the only contact is thru the exhaust
manifold donut. Highly resistive. mine is at 226,000 ohms. Put a gnd
strap on it.

Just a few thoughts, this guy said his noise went down from S7 to S2.

bye for now.

Anyone who has watched a WW2 era film or a cop movie knows how to push a
PTT button and talk. That's what I wanted when I was first attracted to
Amateur Radio and I think that about 98% of those operating CW today will
say the same. I had no interest in CW until I had to qualify for my exam,
but once introduced, I found it to be good fun and exceptionally useful,
particularly since, using today's PC term, I was economically
disadvantaged. (I'll leave off the part about being also being able to
get away of the sourpusses on 75 meters as I don't want to offend anyone.
<g>)

Don't tell me that "they'll learn it on their own." You know as well as I
do almost nobody will just pick it up out of the blue and start learning
it. There has to be some introduction and incentive to acquire the skill

and qualifying for the license has worked just fine for 70-plus years and there's no good reason to stop.

You see Bill, rather than trashing something another segment uses and enjoys, those of us who derive pleasure from operating CW want to share the fun and invite others to join us.

If I wanted to trash something, it would be that old and truly obsolete spectrum wasting 1920's technology that infests the VHF/UHF band: NBFM. Why not increase spectrum efficiency five-fold and mandate a change to ACSSB?

Not a bad idea, given his screwy opinions of code causing brain damage,
and highway speed limits being too low. An important trait of a good
Elmer is being unbiased. Gary fails in that area. I feel his answer
was biased - you don't. I've disagreed with you and him in the past
and as sure as the sun will rise at 0614 HST tomorrow we'll continue
into the future.

>>All the HF spectrum charts I've even seen have included CW - with your

>all amateur frequencies.

Subparagraph (a) comes before subparagraph (c); the reader is told
first that CW is allowed everywhere, then the chart is presented.
If Gary had done that we'd have saved some disk space.

MCW? I used that daily for 3 years on 500 kHz. It's a beautiful sound
when heard through the BFO. Wide as hell, though. Sure got everyone's
attention in the Pacific when I'd key up the 10 kW transmitter. Eat
your heart out that I actually received a paycheck for pounding CW.

>You and Gary may have differences over the CW requirement, but this
>effort to criticize him is beyond belief. Have you brushed on the
>Amateur's Code lately?

Netnews isn't amateur radio. And I don't have to be nice to those who are
attempting to ruin the service by suggesting the code tests be deleted.

>Where'd you get your DoD number from?

I made it up - it's supposed to be A1A (get it?).

>True or false: shafties don't countersteer.

I've never owned a shaft-driven motorcycle - that's heresy. But I imagine
they *would* countersteer.

Burt Fisher <k1oik@ccsnet.com> wrote:
> Frequently I hear hams say, THE name HERE is...
> why...?

Interesting. Yes I do notice that speech patterns on the
air are frequently different from what you'd hear in person.
In CW or digital modes, of course, it must be this way
because it is a manner of communicating which is in-between
printed and spoken forms, and also because we tend to
abbreviate things for efficiency.

As to voice modes, I wonder if some of our habits have
evolved from our CW habits, and of those who came before us.
For example, after hearing

R R TNX CALL UR 579 579 IN GLENDALE, NAME ROBERT -- HW? DE N6AUX K

I might send

OK ROBERT, N6AUX DE WB5NVM -- UR ALSO 579 NR HOUSTON --
NAME HR MONTY ES JUST SWITCHED ON ES HEARING VK2 ES ZL
TODAY -- WHATS GG ON UR END? DE WB5NVM <ar>

In CW, we use some techniques which allow us mentally to keep
the multiple threads of conversation going. Notice that even
though I abbreviate profusely, I use the extra bandwidth to
drop in ALSO before the signal report. This does a couple of
things; it allows me to acknowledge his transmission of my
signal report, and it "refers back" to it: It says "I understand
that my signal report is 579 and yours is 579 as well." Now I
tell him my name. Here is where I drop in the "HR." I'm saying,
in effect, "I understand your name is Robert; the name here is
Monty." 'Here' as contrasted with the information I just heard
coming from the other end of the contact.

In voice, I would expect "here" to be used only if a single
thread were being followed:

"My name's Monty; Mike, Oscar, November, Tango, Yankee; Monty is
my name, what's going on in Nashville? Over."
"OK Monty, hearing you just fine. The name here is Julie and
I've just been working on my SSTV interface...."

Julie is acknowledging my name and giving me her own. Yes, she
could have just said "My name is Julie," you are correct. But
I don't see a major difference. On SSB you're also likely to

hear "the rig here," "the weather here," or "the antenna here." Likewise, the rig and antenna could just as easily be described as "my rig" and "my antenna" although one does not normally own the weather. But you are much more likely to hear the HR on CW which leads me to believe that's mainly where it came from.

What about "the name on this end"? You hear that a lot too.

And while the subject is being discussed, I'd like to know about guys who say "we" when they mean "I." This gets on my nerves more than the thought of someone eschewing ownership of his own name. "We had to go to the dentist yesterday..." sounds like some sort of odd problem where the whole family had to go at the same time. But even when I hear this, I'd rather not dwell on it; I'm interested in radio as a means of meeting and visiting with people and chatting about technical matters, not to teach the world about language. But sometimes it's so tempting to ask for clarification: "you said Y'ALL went to the dentist; did the whole family come along?"

I ran across a similar problem with my 89 Honda Accord - noise that lasted for a while after I turned off the engine. It turned out to be caused by a small computer located under the entertainment radio. Among other things, this box lighted up the ignition switch for 10 seconds after the door was opened so you could find the switch in the dark. That little, unshielded computer was very dirty at VHF. Some bypass capacitors helped somewhat.

Best of luck, Ron KA1KCU

John Nelson <johnn@pacifier.com> wrote:

>As a "practical examination" related to amateur radio, CW prociciency is
>unfit. It has nothing to do with radio operation, per se.

If 38% of all HF amateurs operate CW, and CW continues to be a popular mode with foreign amateurs (ever wonder why all those "rare dx" stations always seem in the lower 25kc of the bands -- are they just "snobs" who only want to talk to "extras"? Why don't they move up to the general portion of the band?), then a CW proficieny test remains a logical and necessary "practical" examination.

I also support the concept of a "endorsement" system where people who want to operate other modes on HF/VHF need to demonstrate operational proficiency at those modes too. However, I realize that this is unreasonable for 1) meeting the test requirements I previously outlined, and 2) it will cause more and more people to whine about "jumping through hoops".

>Indeed, Morse can
>be communicated without any RF activity whatsoever. Arguing that it is
>related to amateur radio and is therefore a good test is as absurd as arguing
>that operating a TCP/IP router is a good test. Both CAN be done via radio,
>but neither IS radio operation.

If you intend to operate TCP/IP on radio, then a practical examination with TCP/IP routers might be appropriate.

Many aspects of amateur radio have relevance in other parts of our every day lives. That neither makes them relevant nor irrelevant to amateur radio. The merits of each within the scope of the discussion -- radio -- is what is important.

It has been true for a long time that CW is allowed on all amateur
allocations. If you tell someone "30m RTTY/Data 10.100-10.150", they
can safely assume CW is allowed from 10.100-10.150. Be serious.

You know, I find it amusing when people defend their poor behavior with
"netnews isn't amateur radio". That's a pathetic excuse for pathetic
behavior. If you want to be a dolt on the Usenet, hey, that's your
right, but you can personally improve the Usenet by setting higher
standard than that. As far as me attempting to ruin amateur radio, that's
pathetic rubbish, too. Sure, I want to see amateur radio change - mostly
I'd like to see it become more technical and cerebral - but I certainly
don't want to ruin it. Whether you agree or not, it certainly isn't
a good reason for you to be less than civil.

>>Where'd you get your DoD number from?

>How did you originally discover that CW was allowed everywhere on HF?
>Again, with your reasoning that fact should not appear in print since you
>feel it is a given and everyone is born knowing it.

This isn't my reasoning at all. I read Part 97 to learn what the
authorized emissions are. Guess what, Jeff - the FCC table of
authorized emissions in Part 97.305(c) *doesn't mention CW either*.
The chart looks just like the chart Gary supplied. Let me
repeat that - the FCC's own chart doesn't mention CW (don't be
confused by the mention of MCW - you *do* know what this is, don't
you?).

You see, 97.305(a), not part of the chart, explicitly allows CW on
all amateur frequencies.

You and Gary may have differences over the CW requirement, but this
effort to criticize him is beyond belief. Have you brushed on the
Amateur's Code lately?

Rob:
Exactly, RF burns are what you get when you touch an antenna
or feedline and the Arc burns your fingers. Any of us who have been
around Ham Radio for a number of years wear these small white
scars. This is a real hazard.

The Microwave oven is quite another story. It heats from the center outward which makes it desirable for heating food(hate those cold centers). Anyone who has used a Microwave oven is well aware of how different tissue, bone and liquid absorb the energy at very different rates. Remember to "rotate your plate " the box says to insure even heating. Some materials seem uneffected by the microwave energy.

The Microwave oven by nature operates in the Near Field. The Near Field has hot and cold spots(that why many MW ovens have rotating tables). Actually the Microwave oven is good illustration of the problems measuring Field intensities in the Near Field and the great variation of strengths at different distances. RF is RF only the wavelength varies. What is interesting
is that the specs for exposure are different for your hands, feet, wrists and ankles(20 W/Kg vs 8 W/Kg for the rest of the body). The chicken leg I heated in the MW the other night was just as warm as the breast.

As it is obvious we all are need of some good objective science on this issue. These facts are known, if your are exposed to an intense enough RF field there will be heating of the tissue, if the tissue is heated
to high enough temperature it will burn. How much heating that will be tolerated before damage has not been determined. We get heated every hour of every day by infared radiation and this is thought to be RF. We know
we cannot live without this radiation(at least we would be very cold). We live in a Paradox, some think we should live without RF radiation, but again we know without this radiation we would not exist.

I bought one about 6 months ago and still have it.
Pros: Will work in duplex mode. Does not require much drive to produce full output power. Lower price and higher power output than the RF Concepts vhf/uhf amp.
Cons: No automatic protection against high SWR.

>they've got a lot of huevos passing themselves off as the "spokesman for
>the ham community at large" ...

well, they're certainly the largest coordinated front...

>It's damned time that they considered the views of non-members (and even
>non-ham wannabes) in formulating "policy" that ends up being presented
>to the FCC as "the will of the nation's hams."

how about the non-members signing on en masse to get their people into
positions of power in the ARRL? the non-hams are out of luck until they
get licensed but they can be associate (non-voting) members.

obviously, you need to review the Battle of Code Free...the ARRL didn't get
their way on that one and it was a grass roots effort.

The CW debate seems to be going on everywhere. We had our own questionnare in Finland, too. Some of us have written about the subject into our local ham magazine. The debate has been, well, pretty emotional.

Let us put emotions aside and ask what is the true purpose of the amateur exam:

Is the purpose of the exam to measure the amount of work one is willing to do to become a radio amateur?

Is the purpose of the exam to limit the count of amateur radio operators?

Is the purpose of the exam to guarantee long distance communications in difficult band conditions?

Is the purpose of the exam to train operators for commercial purposes?

Is the purpose of the exam to promote certain transmission modes over some other transmission modes?

I believe that the purpose of the exam is to guarantee that radio amateurs can operate their radios without injuring themselves or others and that they do not cause interference to other radio services. No more, no less.

1909. GB2RS News 1st September 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-29 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <841336832snx@llondel.demon.co.uk>
Source record: 218094
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 1st of September and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start this week with news that Charlie and Petra Suckling, G3WDG and G4KGC, are claiming a new 10GHz moonbounce record. On the 18th of August they worked VK2ALU, which they believe to be the first G to VK, and Europe to Australasia, 10GHz EME QSOs. The distance - just over 17,000 kilometres - is also a new 10GHz band record. G3WDG and G4KGC used 40 watts output to a 3-metre Andrews dish with 10.7 - 11.7GHz feed.

The Morse Test Service Tenth Anniversary Award certificates were posted to applicants on the 21st of August. However, the Chief Morse Examiner has received some award claims which did not include a return address or callsign. If anyone applied for the award and has not yet received a certificate, please contact Roy Clayton, G4SSH, whose address is correct in the <A HREF="../books/call.htm#CB96">RSGB Call Book.

Kev Hudson, G0TOG, has issued a challenge for groups of people to tackle Granada TV's 'Krypton Factor' assault course, in order to raise money for the Booth Hall Children's Hospital in Manchester. Further details and application forms are available from the Children's Hospital Appeal, Booth Hall Children's Hospital, Charlestown Road, Manchester, M9 6AR, or can be obtained by phoning 0161 741 5098.

Listeners to the 2 metre GB2RS news broadcast at 9.30am local time in Cornwall should note that as from today, the 1st of September, it will be made through the north Cornwall repeater on channel R5, and not on S21. This will be for a trial period of four months. Reports will be welcomed either by the newsreader or direct to GB2RS manager Ian Kyle, GI8AYZ, whose address is correct in the RSGB Call Book. The purpose of the experiment is to improve coverage in this difficult terrain.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Angola, Birgitta, SM0FIB, is active as D2FIB from now until the 13th of September, mainly on 20 metres SSB.

From Mayotte, a German group will sign FH/DL4XS, FH/DL6ET and FH/DL3KDV from Tuesday or Wednesday, the 3rd or 4th, until the 11th of September.

And from St Vincent, Buzz, N5FTR, will be active from the 2nd to the 7th of September either as J8/N5FTR, or with a J8 callsign, mainly on SSB, but with some CW.

Now news of a special event station:

The permanent special event station, GB2OWM, at the Orkney Wireless Museum will be on the air for the last time from its present location between the 6th and 12th of September. The station will be particularly active next weekend, the 7th and 8th. The museum is to be relocated to Kiln Corner, Kirkwall, and it is planned to re-open it next spring. For further details please contact Bill Wright, GM3IBU, whose address is correct in the RSGB Call Book.

Next the Rally News:

The Milton Keynes and District Amateur Radio Society Radio Fayre takes place today, the 1st of September, in Bletchley Park. The event features a bring and buy stall, a club antenna erecting challenge, Morse tests on demand, demonstrations by service organisations, and arena events for the family, including live music. Talk-in is on 2 metres channel S22.

The Bristol Radio Rally and Computers and Electronics Market is being held at the Brunel Centre, Temple Meads Station, Bristol today, Sunday the 1st.

The Telford Radio Rally also takes place today, Sunday the 1st of September, at the Telford International Centre. The event features dealers, a flea market, bring and buy stand, Morse tests on demand, and an RSGB book stall and membership information stand.

The Wight Wireless and Computer Rally takes place at the Wireless Museum, Arreton Manor, Newport, on the Isle of Wight, next Saturday, the 7th of September. For more details, ring 01983 567665.

The Royal Naval - Ulster - Amateur Radio Club will be holding a junk sale at T S Formidable, East Bread Street, Belfast, next Sunday, the 8th of September. Doors open at 12 noon.

The Lincoln Hamfest takes place at the Lincolnshire Showground on the A15 north of the city, next Sunday the 8th of September. The event features trade and craft stands, a bring and buy stand, flea market and Morse tests. For full details please call John Middleton, G8VGF, on 01522 525760.

The Middle Wallop Boot Sale takes place at the Museum of Army Flying, Middle Wallop, between Andover and Salisbury, next Sunday, the 8th of September. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For further details, please call 01264 391383.

Repeater news next:

The 70 centimetre repeater near Hyde in Cheshire, GB3WP, became operational on the 16th of August on channel RB11. For further details please contact the repeater keeper, Mr S Wright, G6YRK, whose address is correct in the RSGB Call Book.

The Wincanton Amateur Radio Club's application for a new 70 centimetre repeater has been approved. The repeater, which will use the callsign

GB3TC and operate on channel RB1, is now under construction. For further details, please contact the club's publicity officer, Tim Stellar, G6RCT, whose address is correct in the RSGB Call Book.

Now for the contest news:

We know of no HF contests this weekend, but the first session in the RSGB Slow Speed Cumulative Contest takes place between 1900 and 2030 UTC tomorrow evening, Monday the 2nd of September. The contest is between 3540 and 3580kHz and the speed should be kept to below 12 words per minute, and never any faster than the other station is sending. The full rules are in the September 1995 RadCom.

Next weekend, the 7th and 8th of September, there are a number of HF Contests. The RSGB and IARU Region 1 SSB Field Day takes place from 1500UTC on Saturday, for 24 hours. The full rules can also be found in the September 1995 RadCom.

The All-Asian DX Contest takes place for 48 hours from zero hours UTC on Saturday the 7th. The Bulgarian LZ DX Contest takes place for 24 hours from 1200UTC on Saturday the 7th, and the AGCW Straight Key Party is from 1300 to 1600 UTC on Saturday the 7th. Brief rules for all these contests can be found on page 22 of the September 96 RadCom.

We also know of no VHF contests this weekend, but there are plenty of VHF contests during the coming week. The first of five sessions in the RSGB 144MHz CW Cumulative Contest takes place on Tuesday the 3rd of September from 2030 to 2300 local time. Next weekend, the 7th and 8th of September, the RSGB 144MHz Trophy contest takes place. This contest is of 24 hours duration and begins at 1400 UTC on Saturday the 7th. The fourth RSGB 144MHz Backpackers contest takes place on Sunday the 8th from 11 to 1500 UTC. The rules for all these contests can be found in the September 1995 RadCom. Finally, the third of four sessions in the 24GHz Cumulative Contest also takes place next Sunday, the 8th. For further details on this contest please contact Lehane Kellett, G8KMH, whose address is in the RSGB Call Book.

And now the solar factual data for the period from the 19th to the 25th of August compiled by Neil Clarke, G0CAS:

Solar flux levels increased from 68 on the 19th, to 75 by the 25th, and averaged 72 units. The 90-day solar flux average on the 25th was 71 units, one unit up on last week. X-Ray flux levels increased and peaked at B2.9 units on the 23rd. The average was A6.4 units. Geomagnetic activity started at 'quiet' levels with an Ap index of 4 on the 19th. Later in the week activity increased to 'unsettled' and the average was Ap 8 units. The solar wind between the 12th and 18th of August ranged from 340 to 480 kilometres per second, with the highest speed noted on the 14th. Particle densities averaged 17 particles per cubic centimetre on the 12th but declined to only 3 particles per cubic centimetre by the 17th. Bz hovered around zero nanoTeslas most of the period.

Now the ionospheric data for Central France, for the period from the 16th to the 22nd of August. The F2 daytime critical frequencies averaged 6.2MHz and the darkness hour lows 2.8MHz. The daytime highs took place between 1800 and 2000 hours every day, except on the 20th, when they took place at 1100 hours. The darkness hour lows took place between 0200 and 0400 hours. 18 hours of blanketing E was reported by Meudon.

And lastly the solar forecast. This week the more active side of the sun is expected to be rotating away. Solar activity could be at low levels during the first half of the week. Solar flux levels are expected to decline from the mid 70s. Geomagnetic activity is expected to be at 'quiet' levels. MUFs during daylight hours are expected to be about 18 MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 9MHz.

During recent sunspot minima, there have been large geomagnetic storms and auroras. These storms appear without warning and are impossible to forecast. Whilst the sun is showing signs of solar flare activity, such as the X2-class solar flare which took place in July, and now that we are approaching the equinox, a time that is statistically favourable for auroras, it could be that over the coming few months the time is right for one of these 'rogue' storms to take place.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Kilo and M1 Alfa Zulu series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Golf series.

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still employed throughout the world.

* It is the most efficient mode in terms of power required for long-distance communication ,least susecptible to interference,and conserving of the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical differences;it provides for ready acceptance of youngsters in an adult enviornment.

* It is the ONLY radio communications mode that is understood readily by both man and machine.

Please note : the above article was submitted for packet by N1CNS as a reminder that it is a serious and viable means of communication. Any responses may be sent to me WA1HVD @ KA1AZ.RI.USA

-

Fleaspeak - the vernacular of hamfest fleamarkets.

Fleaspeak English Translation

This rig puts out a BIG signal It's 50 kHz wide
This is a really good CW rig. It doesn't work on SSB.
This is a really good SSB rig. It doesn't work on CW.
This is a really good rig. It doesn't work on CW or SSB.
The transmitter is outstanding. It doesn't receive.
The receiver is really hot. It doesn't transmit.
This rig is really hot. It's stolen.
It seems to be a vintage regenerative type. It oscillates.
I just retubed it. Got 'em from questionable used tube stock.
I just aligned it. The slugs on the transformers are jammed
I don't know if it works. it doesn't work, probably never has.
It doesn't chirp. it doesn't chirp because it doesn't transmit.
The audio sounds great. The 120Hz buzz is faithfully reproduced.
I just had it serviced. I sprayed WD-40 over all the wiring.
It comes with the original box. Just brush out the kitty litter.
Better buy it now, cause it won't last. no transation needed.
Sure, it works at full power. It sucks all it can from the wall.
This rig has wide frequency coverage.
It drifts up and down and out of band.

Frequency stability is great.
The VFO doesn't work - you'll have to use crystals.

Real popular rig in its day.
There were whole HF nets on the repair and maintenance problems.

QST gave this one a really great review.
The language broke new ground for profanity.

It might need a bit of tweaking.
Marconi himself couldn't fix it, much less align it.

It was used in government service.
It was stored outdoors on a wooden pallet.

The dial drive may need lubricating.
the gears are stripped and the setscrews frozen.

I plugged it in to check that it lights up.
The light came from the two foot high flames.

I'm selling it because I have two of them.
I'm getting rid of my parts radio.

You won't find one at a better price.
Better from the point of view of the seller.

This is a collector's item.
the manufacturer just went belly up and won't honor the warranty.

It came from an estate sale.
If you have any problem take it up with the owner.

I had it on the air just last night.
And you thought the woodpecker was gone.

It worked last time I used it.
if it still worked I'd still be using it.

The only lightning damage was a fuse.
The only lightning damage I recognized was a fuse.

I have the [...] somewhere. I'll send it to you.
you'll never see the [...].
I'll help you carry it to the car.
I'll do anything to unload this boat anchor.

It works ok on 80 meters.
It had some parasitics
but I got in and really screwed it up and now I want to unload it.

The tubes used by this rig are worth the asking price.
The rig uses a rare 7360 beam deflection tube for a balanced
modulator, but it's blown and you'll spend \$80 to get a new one.

This is the rig of my dreams. I really wanted one of these as a
kid, but now <snif> I've got to let it go.
As I've gotten older, I've learned what a hunka junk it is.

The signal quality of this rig was easily recognizable in its day.
The high distortion and bad audio quickly identified this rig.

This rig will bring back the feelings and atmosphere of vintage
ham gear.
The bypass capacitors to the
AC line put enough voltage on the chassis to give you a shock
in the lips through the microphone, and it smokes so bad when
you turn it on that you'll probably start coughing and wheezing.

I'd keep this baby, but my wife is making me clean everything
out.
I finally got around to giving this thing the proverbial heaveho.

There are a couple of other people interested in it.
someone sat on it to tie his shoelaces while walking past the table.

You'd better buy it now, because I'm leaving soon.
The previous buyer and his brother,
Guido, are heading back toward the table and they aren't smiling.

Joe NA3T, FM05

Frequently I hear hams say, THE name HERE is_____.
How often do you say when you meet someone (assuming your name
is Charlie), THE name HERE is Charlie? You never do that right? After
to do so is so impersonal and asinine that you would not want
to seem like a fool-then why do it on the air? Just because you
are a ham is no excuse not to be personal. Of course you could
really sound like THE jerk of the year by saying, THE first
personal here is Charlie (at least if you are not personal-you are
using the word-albeit it in an extremely impersonal way).
Also why say "here", is your name any different when you are "there?"

73 from we here (not there) at K1OIK where THE name are Burt.

>keyboard-to-keyboard.

"I have not tested it but it runs flawlessly". This is the comment that you see from many commercial-FM-transceiver 9k6 users. Often referring to a claim from others that it is inadequate.

However, please not that the vast majority of people who DID test it, will tell you it IS inadequate.

>The only downside is I have to run a 250ms TXDELAY thru the repeater, as the
>PLL (of course) "sweeps" a little when switching from the TX freq, to the RX
>freq...and vice versa.

That downside would be sufficient for me not to buy it. And it should be for you as well.
You are causing QRM on nearby channels with that sweeping transmitter (which is a design problem that plagues ALL Kenwood TM-[2345][34]1 transceivers), and the long TXDELAY cuts into the efficiency of the channel.
You share the channel with everyone else, so you should be considerate.

>Other than that...I like it very much, and it works well.

You have not tested it. How would you know?

Perhaps in your country, but not here.

In the US, we have both a theoretical and a practical element
to our examination elements. The theoretical is merely a multiple
choice exam. The practical is the code examination.

Unfortunately, we use a volunteer-examiner system where people
volunteer to give amateur radio examinations. The examination
process needs to be relatively uncomplicated and free of anything
that might be "subjective" on the part of the examiner. At this
point, the multiple-choice examination and code examination fit
those requirements.

Code test elimination supporters have not addressed the issue
of the "theoretical verses practical" aspect of our amateur
examinations, nor have they designed a reasonable alternative
to the existing code test that fulfills the means test of being
non-subjective, uncomplicated, easy-to-administer, and
related to amateur radio.

>isn't just my opinion.

I disagree. I just dont agree with your teminology I guess. I would say
that ny setup works flawlessly with its given settings. Now those SETTING
may be "unaceptable" to you (and others), but I was simply answering the
persons question...which is YES...there ARE PLL radio that will work at
9.6k.

BTW, that was the setting for duplex operation. I can run 100ms in simplex.

>Most folks? Most folks I know are using less than 70mS. Maybe most
>folks you know are using flawed radios, too.

No...I know of no one on packet that is useing a flawed radio.

>50mS TXD for 9600 baud
>is not a high standard.

That may be true, but the average TXD in my neck of the woods is much higher.

>Well, if everyone in your area is running 250-300mS TXD, I doubt you'll
>see replies quickly enough for your receiver to miss them. How
>do you actually know your operation has been solid with no retries
>by other stations?

By monitoring the frequency of course.

>You're taking this far too personally. Did I criticize you?

Did I say you did? :)

>No. I
>pointed out some of the problems with using a PLL radio for 9600 baud.

And I answered the guys question which was "...if there are any PLL sets
that are satisfactory?" The answer was yes...and I also added some information
and settings so he could get the whole picture, as not to cloud the issue.

Take care Dana, and thanks for the feedback.

"Inadequate" in what way?

>>The only downside is I have to run a 250ms TXDELAY thru the repeater, as the
>>PLL (of course) "sweeps" a little when switching from the TX freq, to the RX
>>freq...and vice versa.

>That downside would be sufficient for me not to buy it. And it should
>be for you as well.

Well...I certainly wouldnt pass judgement on others what to buy, but lets not
forget...everyone has to start somewhere.

>You are causing QRM on nearby channels with that sweeping transmitter
>(which is a design problem that plagues ALL Kenwood TM-[2345][34]1
>transceivers), and the long TXDELAY cuts into the efficiency of the
>channel.

With the deviation set correctly (3.0), it does not sweep outside the 5khz
limit, but I agree that "long" TXDs affect channel effeciency.

>You share the channel with everyone else, so you should be considerate.

I run the same TXD as most users on the freq.

>>Other than that...I like it very much, and it works well.

>You have not tested it. How would you know?

It works well in the regard of solid connects, and no retries with other
stations, and when on the 9.6k repeater, results are the same.

Take care Rob.

Hello,

Here in Holland they are rebuilding the repeaters for CTCSS-input.
Do you have a CTCSS-print for the IC04E ? Or maybe an old (broken)
IC04A

Ofcourse I'll pay for the hardware and the shipping.

Or, . . . does anyone know another solution to make sub-audio-tones

Thanks in advance,

Gary:

I have to agree with you wholeheartedly, in your discussion!

I currently have a prototype SSB radio modem operating at 115kb. It
blasts data. It doesn't support voice, though.

> Is the person selectively reading just various parts of the rules?

Although I would hope all classes of licenses would understand this,
apparently that's not the case. The rules specifically allow CW on all
allocations. All other modes are permitted in specific subsets of
those allocations. So knowing that a subset allowed CW doesn't
imply that it allows *any* other mode. This is a simple mathematical
deduction problem Jeff. In particular, knowing that CW is allowed
at 144.050 MHz doesn't imply that any other mode is allowed and
in fact *NO* other mode is allowed.

I kind of like Gary's humor about Morse causing brain damage. Perhaps
you are an example given that you don't simple to be able to apply
simple mathematical deduction rules to what stated in Part 97. ;-)
And highway speeds *are* too low. The highways (and most vehicles)
were designed to be driven at speeds in excess of 55 (or now 65 in many
areas.)

>>True or false: shafties don't countersteer.

> only want to talk to "extras"?

They'd probably like to talk to someone outside W land. Selecting those
25 kHz allows them to eliminate about 85% of W land operators. Also,
prior to incentive licensing, the bottom 25 kHz of most bands was the
normal stomping grounds for CW and in particular, DX. Incentive
licensing just made it easier for extra class licensees to paper their walls.

> Why don't they move up to the general
> portion of the band?), then a CW proficieny test remains a logical and
> necessary "practical" examination.

Huh? Based upon the absurd licensing structure we currently have?

> and 2) it will cause more and more people to whine about "jumping through
> hoops".

I've seen this endorsement scheme proposed before and initially I was
in support of it. But then after spending more than a couple of
neurons thinking about it decided that it was really a ridiculous idea.
If you aren't proficient in a mode, you either won't use that mode, or
if you do, you either won't make many or any contacts and move on
to some other mode, or you'll become proficient in the mode and
make contacts. What possible purpose would mode specific endorsements
serve? Remember this isn't like getting an IFR endorsement for flying
where your mistakes kill people including yourself.

> Many aspects of amateur radio have relevance in other parts of our
> every day lives. That neither makes them relevant nor irrelevant to

Absolutely. So what *IS* the relevance of Morse testing to receiving
non-Morse HF privileges?

Be careful of some of the lists. SAM for example does not list club stations. I saw a list with W4NT on it and that call is the Southeastern DX Club.

Ed K4SB, Shadow Software provides a list of calls in several variations that is more accurate and he has those that are coming available with available date. He advertises in several mags including ART and QST.

Thanks for clearing that up for me Todd. Sometimes I have a hard
time staying awake reading what Gary says.

No, Todd, I wasn't trying to be argumentative. To borrow a phrase from
my friend Carl, I was merely trying to point out nicely that Gary's statement
that there are no CW subbands was 'pure bullshit'. As opposed to
impure bullshit.

Besides, if Gary has hired you to do his arguing for him, I'm outta here.
I learned my lesson - never argue with a pro.

mike, before the FCC got out of the exam biz, they quit using CW trained examiners to give the test. the test proctor put the tape in the player, turned on the PA and played it. passed out the fill in the blank tests. graded it. one recurring story was that the tape contained misspelled data that was required to be parrotted back vertbatim to consider the question correct.

Bill,

Why in the hell would I want to leave the comfort of my home to go sit and operate 40m CW in some club station???

If I want to do it, I'll set up a station to do it ... I have NO interest in operating CW, nowhere, nohow ...

Now if the licensing requirments are modernized (read, "CW test is eliminated"), I'll be at the next available testing session and walk away with Extra ... (half asleep, in a drunken stupor)

Practical exam, my backside!!!

What's practical about an exam in an outdated mode?

As others have pointed out, there's NOTHING majical about CW ... it doesn't guarantee that you can properly operate SSB, FM, RTTY, packet, or any other modes used on HF, but it's the only one for which a test of "skill" is required to get a license.

Face it, the requirement is outdated and rediculous ... if you want to operate CW fine, but stop shoving it down everyone's throats.

It's like a government-mandated "religion" ... it's WRONG!

No, for the most part they're not snobs ... they're simply taking advantage of the fact that their governments have not created sub-bands for eletists like our has and that those segments are less crowded.

They operate there and say "listening on ____ kHz" so they don't get buried in their own pileups by the US lids who can pound CW but don't know squat about operating courtesy or proper proceedures. Or those whose speech processors and "linears" are 50kHz wide with intermods to the umpteenth order ...

Tony,

An "invitation" usually infers the opportunity to decline without reprisals. There is no "invitation" to "join in the fun" ("fun" is your term for CW, not mine) only the demand "do it or stay the hell away!!!" issued by the CW olde farte "establishment" and enforced by the FCC at the request of the ARRL.

>If I wanted to trash something, it would be that old and truly obsolete
>spectrum wasting 1920's technology that infests the VHF/UHF band: NBFM.
>Why not increase spectrum efficiency five-fold and mandate a change to
>ACSSB?

Nobody has suggested "trashing" CW ... nobody has said "ban its use" ... just "eliminate the requirement for CW test to get a license" ... as far as NBFM is concerned I'd be inclined to agree ... it's actually being done in the commercial bands ... stating sometime this year, I beleive, to get type approval on a radio for the Part 90 bands will require that the radio meet new spectral efficiency standards ... if memory serves me correctly, the standard will (effectively) require the use of QPSK or better ... (spec'd in bits/Hz ... I forget the exact number, but recall it as a QPSK or better type of number) ...

That's part of my point against CW requirements ... the FCC is pushing commercial interests ... if we continue to use our spectrum inefficiently, we'll be much better targets in reallocation proceedings.

We also need LOTS more hams to boost the users/MHz number significantly. That'll both push us to use our spectrum more efficiently, it'll look a LOT better to the FCC in terms of justifying the size of our allocations.

Public interest value ~= (Users_per_MHz)*(Value_of_user_activity)

Right now I'm afraid we'd rate pretty low ...

Forget it. 2500W at 12V will require an input current of 210A. That
is a lot of current. It is not impossible, but quite a demanding task
and potentially dangerous. You would be much better off starting from
a much higher voltage. There was an article in RadCom about modifying
a car alternator to produce a.c by removing the diodes and adding
a new exciter/regulator circuit, but only to a few hundered watts.
A better prospect is a generator, or a stack of 12V lead acid batteries
in series giving maybe 48V or 120V d.c and an invertor kit. You can buy
these ready made reasonably cheaply.

Yes... And.... What's your point? Seems obvious that you'd want to be able
to use the lowest-common-denominator of person to administer your test.
Someone with enough brains to handle the administrative chore yet doesn't
have any specialty knowledge that means you have to pay them more than
minimum wage. This is why we don't see very many MDs scooping ice cream
at the local snack shop.

>Practical exam, my backside!!!
>
>What's practical about an exam in an outdated mode?

The mode isn't "outdated".

Fact: Its in use by 38% of US amateurs on HF.
Fact: Its in use by numerous foreign amateurs.
Fact: It allows, through common symbology, two people who do not even
share the same language to communicate.
Fact: One purpose of the amateur radio service is to promote goodwill
internationally.

If you can't communicate, you can't promote international goodwill.
A CW proficiency examination tests these elements.

Is it perfect? Of course not. Just as you can take the theory exams
and know nothing about theory when you're done, you can take a CW
exam and not really "know" CW operation.

>As others have pointed out, there's NOTHING majical about CW ... it
>doesn't guarantee that you can properly operate SSB, FM, RTTY, packet,
>or any other modes used on HF,

This is true. I believe there should be practical examinations for
the other modes too. I also know that my belief is unrealistic and
will never come to fruition in today's "gimme, gimme, gimme" welfare-
state-mentality US populace.

>but it's the only one for which a test of
>"skill" is required to get a license.

Not many foreign operators use RTTY or Packet on HF. An equal number
might use SSB voice, but not necessarily in english. Thus, CW remains
a common mode of operation that should for the time being be tested.

>>"I have not tested it but it runs flawlessly". This is the comment that
>>you see from many commercial-FM-transceiver 9k6 users. Often referring
>>to a claim from others that it is inadequate.

>>However, please not that the vast majority of people who DID test it, will
>>tell you it IS inadequate.

>"Inadequate" in what way?

1. the quality of the transmitted signal is poor. just look at the eye
pattern when receiving it on another receiver.
this means you have inherent "noise" in your transmissions that causes
bit errors at the other end. you will need a stronger signal than would
be necessary with a good quality transmitter.

2. the required TXDELAY is long. in 250ms you could have transmitted 300
bytes of information, but your station is just idling through all that
time. what a waste.

>>>The only downside is I have to run a 250ms TXDELAY thru the repeater, as the
>>>PLL (of course) "sweeps" a little when switching from the TX freq, to the RX
>>>freq...and vice versa.

>>That downside would be sufficient for me not to buy it. And it should
>>be for you as well.

>Well...I certainly wouldnt pass judgement on others what to buy, but lets not
>forget...everyone has to start somewhere.

But is is a *VERY BAD* idea for everyone to start with inadequate equipment
and then later having to upgrade it to decent stuff.
Remember that most people buy these radios because they are '9600 baud
ready', which the really aren't. The money is better spent on a suitable
radio in the first time.

>>You are causing QRM on nearby channels with that sweeping transmitter
>>(which is a design problem that plagues ALL Kenwood TM-[2345][34]1
>>transceivers), and the long TXDELAY cuts into the efficiency of the
>>channel.

>With the deviation set correctly (3.0), it does not sweep outside the 5khz
>limit, but I agree that "long" TXDs affect channel effeciency.

On the 1200 MHz model, it sweeps about 2 MHz outside of the channel.
I don't know the exact figure for the 430 MHz model, but I think it
is a few hundred KHz. Put your station in some fast beacon mode (where
it transmits a packet every few seconds) and go to a nearby amateur
and tune over the band near your transmit frequency. You will be
disgusted.

>>You share the channel with everyone else, so you should be considerate.

>I run the same TXD as most users on the freq.

That is required with that transceiver because of its terrible performance.
Had you chosen a Tekk, you could be running a 10 or 20ms TXDELAY.

>>>Other than that...I like it very much, and it works well.

>>You have not tested it. How would you know?

>It works well in the regard of solid connects, and no retries with other
>stations, and when on the 9.6k repeater, results are the same.

Please send a 200K file to one of your fellow amateurs, and report us
the total number of retries during that file transfer and the effective
bitrate you have achieved for transferring the entire file.
We don't mind if you take a few weeks before you publish the results
because I'm sure you will be disgusted when you look at the first test
results and you'll want to tweak everything you can to publish something
that won't make you blush.

Good luck!

This lame design seems to be Kenwood's favourite.
The TM-[2345][34]1 series suffer from it as well.

Because of an unfortunate decision a long time ago, many nodes in
the Netherlands use Kenwood TM-531E transceivers for (at least part of-)
their 1200 MHz links to neighboring nodes.

When you are living near such a node, a 2-3 MHz band segment around the
transmit frequencies of the node is filled with 'static' caused by the
several transmitters keying up and sweeping to their operating frequency.
Of course, the links are busy and each transmitter keys at intervals
at most 10 seconds apart.

Even worse: when a node has more than one link roughly in the same
direction, e.g. a link to a neighboring node and a link to a nearby BBS,
the transmissions on one of the links cause data corruption at the
remote receiver on the other link.

This is not theory, it has been directly proven in practice.
(switch off one of the link, and the quality of the other link improves!)

Using the 70cm version of these transceivers (for user access) has
exactly the same problem because different frequencies are in use for
each neighboring node, and the sweeping over the band during keyup
will cause QRM in the neighboring node's area.

Iv'e been interested in reading all the messages about no-code verses
code.
I'm a general class operator who practiced code to pass an exam. At the
time
it gave me a feeling of commitment and challenge, for this I appreciate and
respect my license. I have to wonder what amateur radio is all about, in
the
light of this debate. For me the meaning of Amateur Radio has always been, a
challenge to learn new things. Anyone can pick up a mic and talk. If it was made
this simple then the telephone would be sufficient for your needs. At
this time,
I don't use morse as a means of communicating but I understand and appriciate
the reasons that I learned it.
I guess there are differnt types of people, some who accept challenge and
those who
complain about it.

>I have not been radioactive for awhile, and was wondering what baud rates
>are packet TNC's using now?

Most are 1200 bps, and on occasion actually achieve some semblance of
that speed.

A few people in some communities are experimenting with 9600 or 19200 bps,
but there are very few radios on the market that work well at that speed
(most take far to long to switch from Rx to Tx or back). The TEKK data
radio and a PacComm TNC with 9600 bps modem is a winning combo, for less
than $400 if prices are what I remember them to be.

The GRAPES 56kb modem kit is still available, but it's not a TNC. It
plugs into a special adaptor card in your PC and needs a transverter,
so it's about $500 to $700 to get it on the air from zero. But FAST!

Once you pick about 30 candidates, use the callsign database at the
University of Arkansas to look them up. It is updated daily directly
from the FCC database. It is at http://www.ualr.edu/~hamradio/
That way, you can see if any of the so called "available" calls have
been issued recently. A couple that were on my list as available have
been issued. Like W1HQ, W1HP, W1US and a few others. W1HQ was issued
August 20'th...

>N9YFK

One potential pitfall that you hadn't considered is with regards to editorial autonomy. Newsline has always been able to give unbiased news about amateur radio, and considered no group or individual a sacred cow, not even the ARRL. I recall a similar proposal made shortly after it was announced that the Simtel20 archive of MS-DOS programs at the White Sands Missile Range was going to be a victim of government budget cuts. Someone suggested that Microsoft sponsor a new site, as they were in the PC software business. This was promptly laughed off the net with the rebuttal argument that Microsoft was not an unbiased player in this field, and its ability to unselfishly make available large amounts of free software (some of which may be in direct competition to its own commercial products) would be in serious doubt.

So, while I have nothing against the ARRL, I do know that any large, successful organization is very careful about its own image-management, and how it spends its funds. Somehow I don't think that, even if the ARRL does agree to sponsor Newsline, that the editors of Newsline would be willing to operate under the inevitable conditions and editorial review that the ARRL would probably demand.

As for supporting Newsline personally, I'll send them an extra $20 in addition to my usual annual donation. If enough individuals do that, we may save Newsline after all. At the very least, we can help them cover their current debts for their excellent service to the amateur community in the past.

1949. Final Reminder - Ton O' Radios Special Event

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-30 00:00:00 UTC
From: eldridge@cax.ES.xerox.COM
Message-ID: <322704EF.3CC2@cax.es.xerox.com>
Source record: 217947

The Xerox Amateur Radio (XAR) club WD6CZH will be running the "Ton O' Radios" special event station this weekend. Our goal is to work over 2,000 pounds of radios. The exchange is your callsign and the weight of the transmitter and receiver (or transceiver) used to make the contact.

Time: 1600-2400 UTC
Date: 31-Aug-96
Freq: General portions of the 40M, 20M, and 15M bands
Novice portion of 10M band
WD6CZH repeater (near LAX) 449.325- 114.8PL

For a certificate, send a 9x12 inch SASE to XAR, 6940 Bacarro St., Long Beach, CA 90815-4805

Only to the extent that a rather large or certainly noticable boorish
segment of the amateur population feels the need to jump on any
DX to either collect one more piece of wall paper or prevent
someone else from getting their piece of wall paper.

In general there is plenty of available HF bandwidth depending upon
your needs. If you need is DX communication, then at this time in
the solar cycle we get squeezed a little, plus add in all the egomaniacs
that get on many weekends with their array of towers and amplifiers
to make points, and HF spectrum gets tight. But right at the moment
(8/30/96 1520 UTC) there is plenty of unused HF spectrum (VHF and UHF
too!)

Not to the FCC, it doesn't! They get kinda picky when someone talks about operating a transmitter. FCC licenses are required to operate higher power transmitters. There is no license required to _build_ a 50 Kilowatt commercial broadcast transmitter - just one to operate it on the air. But the FCC no longer requires Morse code proficiency to operate, build or repair a transmitter - the lone exception being the amateur service. The amateur service itself has been the one pushing to retain the code requirement. The FCC felt it was a moot issue long ago.

Anyone find it ironic that some of the commercial service repeaters still ID in Morse code, yet ostensibly no one in the service knows Morse code?

>"Just give me a radio and let me yack. That's all I want."

Are you implying with this sarcasm that you personally do something with your radios OTHER than "yack" on them? The whole thing sounds kinda perverse to me.

I wish everybody would post them where they belong on r.r.a.policy
and not here on r.r.a.misc. r.r.a.policy was created for the purpose
of offloading Morse code/CW/policy discussions from this newsgroup.

> For me the meaning of Amateur Radio has always been, a
> challenge to learn new things.

Me too, but Morse code is certainly not new. Question is: Would you
rather learn old things like how to build a vacuum tube by hand or
new things like how to program a DSP engine?

1957. Wiring new house...

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-30 00:00:00 UTC
From: Rob Roy Jones <rrj@austin.ibm.com>
Message-ID: <Pine.A32.3.91.960830102502.3534k-100000@orthanc.austin.ibm.com>
Source record: 217955

Greetings,

My wife and I are having a house built and it's almost at
the point where they can begin sheetrock. My question is
this. My shack will be in the study on the second floor.
I have the opportunity to run coax from the study to the
outside. I'm going to do my best to keep it from other
wiring. I also was planning on putting a plate on the
outside wall with an SO-239 (?) connector so I could
just hook up whatever I decided to string up as an
antenna.

Has anyone done this before and am I going on the right
track? We've installed Kool-Ply (tm) in out attack so
I don't really think an attic antenna is in order.

I'd appreciate any feedback on this. Thanks!

-Rob

Oh don't worry about that, Rob, we'll let you stand far enough
back so you won't get an RF burn. Just stare into this open
waveguide for a few minutes. It won't arc and cause a RF burn,
but it will certainly cook the lenses of your eyes. The 800 watt
uplink transmitter on our live truck cooks hotdogs, and it'll
cook you too if you stand in front of its dish. A VHF transmitter
will do that too if you stand near enough to its antenna. Even a
10 mW gunnplexer will do it if you hold it right up to your eye.

It's just a matter of achieving sufficient SAR to the affected
tissue. That's determined by the inverse square of the distance
from the source, power level, absorption quality of the material
at the particular frequency, and the ability of the affected
tissue to reject heat. The lens of the eye is most susceptable
because it has no blood vessls to carry away the heat, and it
is of low mass, so the 8 watts/kg limit can be easily exceeded
with a power flux well below 8 watts. The lens masses about
2 grams.

The less power you run, the closer you can get to the antenna,
and vice versa. That's what the exposure standard is all about,
keeping you far enough away to get the field intensity levels
down to where you can handle them. RF can penetrate below the
surface of the body, and whole body bulk heating effects aren't
the only ones of concern. As mentioned, the lens of the eye is
particularly susceptable, but there are parts of the body even
smaller which can be affected by even lower power levels.

Inside the cell, cooking a single tiny strand of DNA is sufficient to cause a mutation. Most times that mutation may not matter, some of the time the cell will die, but on occasion the mutation will be such that uncontrolled cell division is started, and that's called cancer. How much power density is required to cook a microgram of DNA? Not very damn much.

And cooking isn't the only effect. In vitro experiments show that a mere E-field potential, and a darn low one at that, can cause visible effects on cell mitochondria during cell division. For rapidly dividing cells, like the red and white blood cells, or spermatozoa, the statistics say the effects can be catastrophic, IE our old friend cancer again. For slowly dividing cells, the odds of a harmful mutation are very much reduced since there are fewer chances for one to occur.

This should not be a surprise. If you've ever done chromatography, you know that it only takes a very small potential to have effects on organic chemicals. This is mostly a concern at ELF where biological chemical reactions occur at approximately the same rate as field changes. But if the cell electrolyte acts as a rectifier (and it can in the microchannels which allow ATP to migrate through the cell wall), then high frequency pulsed fields can have much the same effect. That's why pulse rates in the 5-15 pps range are dangerous.

Now we'd expect any mutations caused by the mechanisms mentioned above would be fairly random in nature, IE any given mutation may not lead to cancer, but some (at least one) can. Just as it may be unlikely for you to roll seven three times in a row in craps, it is unlikely that any given mutation will be the cancer causing one. But if you roll the dice enough times, probability theory says you eventually *will* roll those sevens. Exposure rate and exposure time increase the number of rolls occurring in the body. The larger the number of rolls thrown, the better the odds become that you'll roll a winner.

You could be "lucky", and throws one, two, and three are the sevens. In which case, you get cancer right away. Or your luck might be "bad", and the sevens won't come up until your 500,001, 500,002, and 500,003 rolls. That might mean you'd show no apparent harm for years. You might even die from some other cause first. Probability theory can't tell us which set of rolls will be the magic ones, only that they are virtually certain to occur if you roll enough times.

To improve our odds, we need to keep the number of rolls to a minimum, hence we set prudently low exposure standards. That's no guarantee that we won't be "lucky" right out of the chute, however. Probability theory can't predict what happens to individuals, only the statistics of large numbers can be precise. And they can be precise indeed, that's how actuaries keep insurance companies solvent.

If you demand a standard where you can say "above this level you get cancer, below this level you don't" to an individual, you won't get it. It doesn't work that way. But you can say that for a given

exposure level to a large population, X number will get cancer on average while at a different exposure level Y number will get cancer on average. You can then attempt to set exposure standards where X or Y will be "acceptable" numbers on average. What's acceptable? That's a subjective call, but increases over that of the unexposed population of 2 to 3 times is generally considered unacceptable, *even if the absolute numbers are small*, if the costs of reducing the risk is also acceptable.

This gets into calculating how much a human life is worth. There are philosophical and religious arguments about this, but the actuaries have some cold numbers they're willing to apply. The rough estimate is that a human life is worth about $1,000,000 prorated over 74 years. So if the costs per life saved of the mitigation steps are less than $1,000,000 (prorated), it is worth doing.

In other words, the risk of heart disease is 1 in 4, so very large amounts of money should be spent for mitigation. The cancer risk to amateurs from RF exposure may only be 4 per 100,000 (Milham's numbers) so proportionately less should be spent on mitigation.

Since any possible costs of the FCC's RF exposure standards for amateurs are far below this number for any reasonable assumption of the odds of risks incurred, it is worth doing.

Gary

>>the ham community at large" ...

The point that the ARRL is the largest coordinated group representing
amateur radio is enough merit in itself to be a member. If you
believe in amateur radio and want to protect the service AND you are
not a member of the League, then you're only rowing with one oar. To
belong to an organization does not mean you agree on all points. But
to be on the sidelines and bitch shows a lack of character and
definitely a lack of say in the Leagues business.

Compare this to the ballot box. If you don't vote, don't bitch. If
you don't belong to the ARRL go get a 27 Mhz radio and join the rest
of the whiners. My .02

Not the perfect group I know, but sometimes seems knowledgeable anyway.

Question: On the FCC frequency auctions, when a company `buys' a segment of frequency
do they get it forever? Or just for a period of years? If its bought forever,
could they turn around (like land developers) and subpartion and resell?
So all the $$$ brought in by the FCC auctions a one time thing?

If its a `rental' what keeps (stupid) people who bought, devices using
a part of the spectrum, from using their devices after the `lease' (the company has
on the spectrum) is up?

Can the Government/FCC ever TAKE the frequencies back? (Through no fault of the purchaser)

It is too bad that it has become so popular to interpret
"lack of agreement on an issue" as a "lack of character".
If someone doesn't agree with the ARRL, doesn't want to support
the ARRL, and wants to voice concerns anyway, how does that
show a "lack of character"?

I'm an ARRL member and I strongly support the publishing/education
efforts of the ARRL. I also recognize the ARRL is the de facto
lobbying representation of amateur radio in Washington. However,
I was apalled at the way the 'Little LEO' issue was handled, and
then e-mail contact with David Sumner concerned me further. I
could understand someone not wanting to support the ARRL, and
I don't believe that means that person lacks character.

>Compare this to the ballot box. If you don't vote, don't bitch. If
>you don't belong to the ARRL go get a 27 Mhz radio and join the rest

So, if someone doesn't belong to the ARRL, they are not entitled to
write the FCC directly? If someone doesn't belong to the ARRL, they're
automatically a 'whiner' and not entitled to operate on amateur
frequencies?

I can see that objectivity isn't one of your strengths ;-).

What is with the patronizing attitude?

Someone asked if PLL radios are suitable for 9600 baud.

You authoritatively answered "Yes, my Kenwood works flawlessly".

Several people disagreed with you, and you argued with them, continuing
to claim your radio works flawlessly.

No one, certainly not me, is saying people should start out with the
very best equipment possible - that's your own red herring argument.

If someone is starting out, they're best off if they select the
equipment that works well with a minimum of fuss. This doesn't
mean they have to spend a lot of money - a Tekk radio sells new for
something like $100 and is ideal for 9600 baud, but a fancy
Kenwood sells new for something like $400+ - but it does mean
they should practice some care in the selection of equipment.

There's really no need to become patronizing, Chris.

^^^^^^^^^^
Uhhhhhhhhh hmmm well on my radio there was no diode to be cut....just a solder pad jumper to remove.... here's the complete file as sent to me by KE6VVW.

I have done all of these, including the mod with the computer software and it all works. ***I love my ft-50r!!!***

The (In)Complete Guide to the Yaesu FT-50 Version 1.1

Compiled by Bill Childers, KE6VVW

Disclaimer & Other Nonsense
The information in this document is a guide to the FT-50 ONLY. Having had more than a few radios in my amateur experience, I understand how most hams wish to learn as much about their rigs as possible. I have compiled this guide to allow other people to learn more about the radio without having to search all over for information. I do not guarantee the validity of this information, as Yaesu may change programming or hardware so that some of the techniques in this document may cease to function. I am not responsible if these instructions damage your rig in some way. All I can say is that I have performed the following procedures to my unit, and I am quite pleased with the results. Your mileage may vary, etc.

History

Version 1.0
1st introduced.

Version 1.1
Added: Game mode, Changed High Power Mod to "Internal System Alignment". In this section I also detail the squelch and S-meter adjustments. Also added info to the bug on the FTT-12 Keypad.

Version 1.2
Added: Bob Gudgel's Hardware Jumper Descriptions.

Introduction
The Yaesu FT-50 is perhaps the most unique VHF/UHF Handheld manufactured today. It's made to MIL-SPEC 810, for dust, splashproofness, and vibration. Out of the box, it has not only dual band 2m/440 capability, but wide FM receive and AM receive as well. In addition, it receives 76-200 MHz, 380-500 MHz, and 700-900 MHz (Cellular Blocked). It has one of the fastest scan speeds for an amateur HT. It also has the unique ability (w/ ADMS-1C software) to interface with an IBM PC running Windows and have memories and settings uploaded/downloaded. In addition, it has DCS (digital coded squelch), ARTS (auto-ranging transpond system), and Yaesu's excellent transmit and receive battery saver features. It also uses Yaesu's extremely efficent FET power module that allows for 5W+ of output power with a 9.6V battery pack. With the optional FTT-12 keypad, the unit also performs CTCSS decode, DTMF paging, and also incorporates a Digital Voice Recorder! All of this functionality in such a small package makes it my rig of choice.

Problems (Bugs)
Unfortunately, the FT-50 is plagued by a few bugs. None of them are very serious or life-threatening, just a bit annoying. First among them is its Wide-FM receive. Apparently Yaesu engineers didn't put a wide enough filter in the unit, and some of the bandwidth of broadcast FM signals gets "chopped off". This means that the rig is near useless for listening to music on the broadcast FM band. It works marginally with voice only on the same band. My opinion on this problem: If you want to listen to music, bring a small Walkman or other transistor radio with you. The '50 does an adequate job of bringing voice signals in on broadcast FM, so it's good for listening to emergency broadcasts.
The second "bug" lies in the optional FTT-12 keypad. The manual for the radio states that you can set up a "voice mail" type of functionality that lets your radio operate unattended and record calls for you. This mode doesn't work correctly, although the built-in voice recorder works great. It seems that the unit will playback the wrong voice partition. The problem appears to be in the DTMF page-answer-back area. If you're buying the '50 and FTT-12 solely for this purpose, DON'T! It doesn't work and there's no current workaround.
The third bug has been complained about a bit. It seems that some '50s suffer from a low Tx audio problem. This is due to a factory adjustment that is set a bit on the low side. It is easily fixed. (See Factory Adjustments below).
The fourth "bug" is synergistic with the ADMS-1C software. If there is some kind of problem in downloading a file to the radio, the software aborts with an error, and the rig is left with it's memories cleared in a "limbo" state. This state is actually the European band plan, and if done properly, the rig can be modified to receive even more frequencies... which will be described later. (See modification

section) However, if you want to return the rig to its natural state, simply download a blank frequency file (NONAME.RDF) to the unit. All should be well.

Factory adjustments
If your rig suffers from the low Tx audio problem, here's how to fix it.

1. Remove the battery and antenna.
2. Remove the "NiCd" sticker on the heat sink. If you remove it very carefully, it's possible to re-install it later with the same stickum that's on it.
3. Look in the cavity where you removed the sticker. Proceeding from left to right, here's what you'll see...
Phillips head Screw (Holds the keypad in)
Small Silver Potentiometer (VR1001-VHF Deviation Adjustment)
Small Silver Potentiometer (VR1002-UHF Deviation Adjustment)
Small White Potentiometer (TC1001-DONT TOUCH! CTCSS Tone Adjustment!!!)
Phillips head Screw (Holds the keypad in)
4. Take a small Phillips head Screwdriver and turn both VR1001 and VR1002 about 1/8 turn clockwise. This will increase the VHF and UHF deviation and fix the low Tx audio problem. If it's not enough Tx audio, simply turn both pots another 1/8 turn. Make sure to turn both pots the same amount!
5. Replace the NiCd sticker, battery, and antenna.
6. You're Done!

Internal System Alignment (May not work on some radios)
NOTE: This setting appears to work on radios that have NO MEMORIES programmed. You might want to try STEP 3 before clearing your memories. If step 3 doesn't work, you probably need to clear your memories. BE CAREFUL with these settings... it's possible to really mess the rig up by setting some funky squelch or something... you might want to write the default settings for your rig down.

1. Select 2m VFO frequency.
2. Turn the radio off.
3. Push LAMP, PTT, Knob, and PWR at the same time. The rig will turn on with the squelch open, so turn the volume down!
4. The '50 will display "BAND xxxxxx" where xxxx may differ depending on your radio and whatever mods you may have performed.
5. Turn the top knob. There are a variety of settings available. Here is a listing of them:
* HSSQ: Squelch Hysteresis Adjustment, adjusted by the dial.
* THSQ: Squelch Preset Threshold
* TISQ: Squelch Preset Tight
* S1LV: Low-Scale S-1 Adjustment.
* S9LV: S-Meter Full Scale Adjustment.
* HIPO: Hi Transmit Power Adjustment: Should be calibrated for 5W (Can be pushed higher with a 13.8V Supply)

* L3PO: Level 3 Power Adjustment: Should be adjusted for 2.8W.
* L2PO: Level 2 Power Adjustment: Should be adjusted for 1W.
* L1PO: Level 1 Power Adjustment: Should be adjusted for .1W.
6. Select the adjustment you wish.
7. Push in the Top knob. There will be a "s" that appears next to the displayed number.
8. Rotate the knob to change the setting.
9. Change other settings, if desired.
10. Push the knob for more than 1 sec to save the profile.
11. Select 440 VFO frequency.
12. Repeat Steps 3-10 to adjust the UHF Settings. UHF Settings will have a "U" in front of them.

Modifications
The FT-50 is extremely easy to modify. The first modification is performed for you at the factory... but for those of you who accidently disabled it, or changed it... here it is.

Extended U.S. Receive Mod (Expands receive from 144-148 & 430-450 to 76-200, 380-500, 800-999 'cell blocked') NOTE: All memories will be erased.
1. Turn the transceiver off.
2. Hold down the Knob and Lamp keys while powering the unit on.
3. The unit now has U.S. Extended Receive.

MARS/CAP mod (Extended Transmit Mod: app. 144-159, 420-470) NOTE: All memories will be erased.
Don't transmit on bands that you're not licensed for!! Besides being illegal, it creates problems for people using those frequencies.
1. Remove battery & antenna
2. Remove NiCd Sticker on Rear Heat Sink
3. Loosen (Don't Remove) Philips head screws on rear that hold keypad in.
4. Use screws as thumb holds to press keypad out.
5. Remove screws.
6. Remove Keypad.
7. Under Keypad on Left Side there is a series of Solder Jumpers. They are labeled in white from 1-3. Only #1 will have solder jumpering it. Remove the solder, being careful not to damage or touch any other components. WARNING: If you're not good at desoldering, or have shaky hands, you might want to have someone else do this for you. It's REAL easy to damage the rig.
8. Reinstall Keypad. Be careful of the O-ring around the keypad. Make sure it's not twisted or damaged, as the waterproofness of the unit could be compromised.
9. Install sticker, battery and antenna.
10. Hold down Knob and Lamp keys while powering the unit on. (Extended Receive Mod as above.)
11. Completed!

Super-Hyper Awesome Mod... The mother of all Mods!!! (Requires ADMS-1C software and MARS/CAP mod to be performed)
Receive: 76-999 Mhz (No displayable holes!!!)
Transmit: 120-221 Mhz, 320-499 Mhz (AGAIN, Don't transmit on frequencies where you're not licensed)
NOTE: This mod will disable ARS (automatic repeater shift) and will set 2m and 440 repeater offset to
weird numbers. Make sure you enter repeater offset and +- shift manually. Repeater offset needs
be set once for the rig, then it should be able to be forgotten about. It will also clear memories.
Remember above where I mentioned the ADMS-1C software having a bug? Here's where the enterprising and curious ham can take advantage of that. This mod will install the European band plan in your radio...so without the MARS/CAP mod you will lose the top portion of your 2m band.
1. Are there frequencies in your radio? Don't want to lose them? Simply get the data from your radio as it sits... you can "merge" the frequencies later. Save the file.
2. Perform the MARS/CAP mod as outlined above. Get the data from the mod and name it USA.RDF.
3. Attempt to send the same data to the radio. In the middle of the transfer (around 50%), pull the adapter cable to the PC out of the radio.
4. Thanks to the bug, your radio is now in European mode! Perform the Extended Receive Mod by holding the Knob and Lamp keys down while turning the unit on.
5. Now, the Automatic Repeater offset doesn't work. There's no workaround. Note that the 2m offset has been changed to 0.00. Go to the menu by holding down the knob. Go to SHFT, Option 7. Press the knob. Turn the knob so that it reads 0.60. Press PTT.
6. Now, turn off the radio. Put it back into clone mode. Read the data back from the radio to the PC and save the file as EURO.RDF.
7. If you want to enter frequencies manually or using ADMS as normal, go ahead. Everything should work. If you saved frequencies as above, open EURO.RDF and "merge" the frequencies from your USA.RDF file into it, and save it as another name. Then send the modified EURO.RDF (your filename) file back to the radio using the "template" file EURO.RDF. You're done!
8. To return the radio back to the U.S. band plan, send the USA.RDF file back to it.
Note that I have no way of measuring the sensitivity of the frequencies or the output power of the rig outside of the ham bands. The 220 coverage seems to be very poor, however, the radio does display 220 frequencies. It won't transmit on our 220 bands, though. 800 Mhz receive is vastly improved.

Game Mode
The FT-50R includes an interesting "game" that's programmed into it. Here's how it works:
1. Power up the radio while holding down the MR key. (PWR + MR).

2. The display will show GAME on the left side, and Spd 1 on the
right. You're in game mode!
3. By rotating the knob, you can change the speed of the game. Higher
numbers are faster.
4. Press PTT to start the game.
5. Numbers will start to scroll across the screen from left-to-right.
As they come, you are supposed to push the number on the keypad that
makes a sum of ten, followed by F. Example: 6 appears, press 4, F.
If 0 appears, enter 10 followed by F.
6. The game is over when the screen fills up with numbers.
7. To exit the game, simply cycle the power.

Possible Hardware Jumpers? (NOT VERIFIED)
From: bgudgel@eskimo.com (Bob Gudgel)
Well, I went through all eight permutations while I had it open.

Jumpers (from left to right)
C=closed (soldered)
O=open (no solder)

C O O this is the way mine was shipped -- extended receive
O O O extended transmit (mars modification)
O C O looks like the European mode RX 140 - 174 no extended
transmit
Also, no 800 MHZ or 76 Mhz RX
O C C same as O O O
O O C RX 108 MHz - 174 MHz and 400 MHz - 470 MHZ no extended
transmit
C O C same as O O C
C C C 144 MHz - 148 MHz and 430 MHZ - 450 MHz no extended
C C O some kind of limited mode again (I didn't detail my notes)

Basically, O O O is what you want. All other combinations appeared to
be
something less than full featured. This is as far as I could tell
with MY
FT-50R anyway. Please let me know if anybody finds any important
mistakes here. Thanks

Bob KI7IQ http://www.eskimo.com/~bgudgel

Cliff, the IR and visible radiation doesn't penetrate the body. The
body is opaque to these frequencies. So the heating is a surface
effect. As you note, the body is not opaque to RF down in the frequency
ranges where we operate. Thus the heating happens from the inside out

(actually it's whole body all at once). We know something about the effects of this sort of heating. It is the type of heating we get when the body runs a *fever*.

Now we can go out on a 110 degree F day and survive (assuming we drink lots of fluids). But if we start to run a 110 degree *fever*, we'll be dead meat in short order. We cook from the inside out, especially vulnerable tissues like the brain. That's why RF heating exposures can be more threatening than a hot day. The body can cope with a hot day, keeping core temperatures in a safe range, but it can't deal as well with core temperature rises when it is the core which is being heated directly. (That's also why we can tolerate more exposure to the extremities than to the core body. The heating is less deep, and happens to less vulnerable tissues.)

>
>Reason I ask is it seems everytime I download, I get the same thing in
>both groups. Is my newsreader screwed up or what ?

Yeah, it's screwed up. It should only show you a crossposted message
once, in the first group where you read it. There's only one copy
of a crosspost on the system, stored in the group from which the
post originated, there are only pointers to it in the other groups.
Once you read the article in *any* one group, the indexes for all
the groups mark it as read and you won't see it again.

The only exception to this is if you're on a listserver, then you'll
get the message Emailed to you in each group for which you have a
listserver subscription. (That's a very good reason to get a real
usenet account instead of depending on a remailer.)

Crossposting is overused, but it isn't going to go away because there's
no easy way to tell *which* of the groups in the newsgroups line originated
the particular post to which you're replying (unless it is a thread
origination, in which case it should be the first group listed in the
newsgroups line), so you can't edit the newsgroups line without a very
good chance of breaking the thread. (If your other login is "root",
you can grep the groups to find the home of the post, but the newsreaders
don't let ordinary users do that.) Even then you run the risk of
fragmenting the thread.

The best thing to do is to set the follow up line to a single appropriate
group, thus redirecting the thread to that group. That's not always wise,
however, with threads whose topics apply fairly equally across a spectrum
of groups. I've rather arbitrarily set follow ups to this article to
the policy group. It doesn't really fit there, but neither does it fit
in misc. Hopefully it will quickly die out and not develop a life of its
own like the current monster crosspost about RF exposure. (Unfortunately,
that thread does have application to several groups, and can't really
be confined to just one. Breaking it into fragments would just increase
repetition of material.)

>I have not been radioactive for awhile, and was wondering what baud rates
>are packet TNC's using now?

Sigh. Most are still using 300, 1200, or 9600 baud. There are a few
souls doing 19.2 kb, and a somewhat larger number doing 56 kb, but
the latter doesn't normally use a TNC per se. For an *unmodified*
voice radio, 1200 baud remains the top speed despite advertising
hype to the contrary. To go faster, you need a modified radio
(sometimes *extensively* modified), a purpose built data radio,
or a RF modem. The big problem is that it does you no good to have
a go-fast system unless your neighbors have one too. So check
around with the locals and see what they're doing. It's likely
to be 1200 baud. If you can con several of them into upgrading
to a faster system as a group, you'll be a packet leader (and
we need more of those).

>
>IMHO ones respect for a priviledge is proportional to the work required
>to obtain it.

I say that the worth of a privilege lies in what it enables a person
to do, today and tommorrow, not in what a person once did. Dusty trophies
are valued for what effort was once expended to gather them, but that effort
is remembered with as much pride (or lack thereof) even if the trophy is
hocked or stolen. No so with a license, its value lies solely in what can
be done with it, today and tommorrow.

It is a tool, not a trophy, and good tools are only of value in so far
as they enable one to do something of value. It matters not if the tool
were gained by great effort or merely found along the roadside. Its value
lies in what it enables one to do with it, today and tommorrow.

A craftsman takes care of his tools, because they enable him to accomplish
his tasks. Only a shallow collector (a fool with no real skills or talents
of his own) values his tools for what they once cost instead of for what
they allow him to accomplish, today and tommorrow.

Many of my most prized tools were inherited from my father. They are
without price as far as I'm concerned, though I did nothing to earn
them except by accident of birth. But my very most favorite ratchet
was found alongside the highway. It cost nothing, it has no sentimental
history, but holds a place of pride in my toolbox, and is the first tool
I reach for when a nut needs to be removed. I don't care what these tools
once cost, but I care very much what they allow me to do. I keep them
cleaned and oiled and carefully avoid abusing them in use, not because I'm
a collector, but because I am a craftsman and they are my life's blood
for accomplishing my tasks.

I view my amateur license the same way. What it cost to obtain is
yesterday's news, only fit to line bird cages. What it allows me to
do today and tommorrow is without price.

You are apparently unaware that the ARRL is promoting TWO survey's.
One survey (QST) will collect ARRL membership thoughts, the other will
look at the entire group of licensed amateurs. The information from
the two sources will be for understanding the differences, if any,
between amateurs at large and amateurs are members of ARRL. These data
will be assessed by the WRC-99 Planning Committe the Board. If you
have questions on how this is being run then contact the committe.
They will be happy to share the information with you.

How much POWER is required to cook a microgram of DNA? Not very damn
much,
because it is so small (~.1 mm cube). How much POWER DENSITY is required
to cook a microgram of DNA? I'm not sure, but probably about the same
amount required to cook the rest of the cell. If you know differently,
that is a key fact. Is there data?

I believe those effects are for low frequencies, not RF. Was your
comment about ELF and low frequency modulated RF in the following
paragraph meant to apply to this paragraph too? I know the low
frequency magnetic field experiments have been difficult to
replicate. There has been speculation about contamination of the
experiments with ferro-magnetic particles. Can you give a citation
about E-Field experiments? Still there has been no evidence that
these effects do cause cancer, just speculation that they might.

Since there has, as yet, been no body of research developed that shows a
causal relationship or even a repeatable statistical relationship
between RF energy and cancer, the odds must be VERY small indeed.

>> To improve our odds, we need to keep the number of rolls to a minimum,

>> get it. It doesn't work that way. But you can say that for a given
>> exposure level to a large population, X number will get cancer on
>> average while at a different exposure level Y number will get cancer
>> on average.

Yes. I agree. However, this assumes that a dose/response curve or a
body of repeatable statistical studies exists. For RF and cancer they
don't. In the absence of that data, making such a standard is largely
guesswork. (So are many things in life, sigh). I think there is better
data available on which to base a standard to avoid overt cooking of
our body parts :-).

>> You can then attempt to set exposure standards where

>> doing.

>> In other words, the risk of heart disease is 1 in 4, so very
>> large amounts of money should be spent for mitigation. The
>> cancer risk to amateurs from RF exposure may only be 4 per
>> 100,000 (Milham's numbers) so proportionately less should be
>> spent on mitigation.

The Milham study is not very useful as a source for calculations of
cancer rates due to RF exposure. The main criticism of the study is
there were no controls for other variables. The increased rates he
observed could have been caused by RF, solder fumes, chemicals used
in the manufacture of electronic equipment or pocket protectors :-).
The study may be more useful in trying to figure the increased cancer
rates in amateurs from all causes, but that's not what we are after.

>> Since any possible costs of the FCC's RF exposure standards for
>> amateurs are far below this number for any reasonable assumption
>> of the odds of risks incurred, it is worth doing.

>> Gary

But, since there is no proof and not even a body of repeatable,
suggestive studies that there is a causal relationship between RF and
cancer, there is no way to make a "... reasonable assumption of the
odds of risks incurred ...". Therefore, ANY costs are unjustified
on a scientific basis.

However, I think the FCC standards intend to address all safety issues,
not just cancer. On that basis the standards are not unreasonable.

Thanks for continuing to write thoughtful comments on many of the
issues that arise in this forum. I always enjoy reading them. In this
case I object to what you wrote because I think it states the case
more strongly than the scientific evidence warrants. Hence my excursion
out of the woodwork.

>> average while at a different exposure level Y number will get cancer
>> on average.

Yes. I agree. However, this assumes that a dose/response curve or a
body of repeatable statistical studies exists. For RF and cancer they
don't. In the absence of that data, making such a standard is largely
guesswork. (So are many things in life, sigh). I think there is better
data available on which to base a standard to avoid overt cooking of
our body parts :-).

>> You can then attempt to set exposure standards where
>> X or Y will be "acceptable" numbers on average. What's acceptable?
>> That's a subjective call, but increases over that of the unexposed

>> doing.

>> In other words, the risk of heart disease is 1 in 4, so very
>> large amounts of money should be spent for mitigation. The
>> cancer risk to amateurs from RF exposure may only be 4 per
>> 100,000 (Milham's numbers) so proportionately less should be
>> spent on mitigation.

The Milham study is not very useful as a source for calculations of cancer rates due to RF exposure. The main criticism of the study is there were no controls for other variables. The increased rates he observed could have been caused by RF, solder fumes, chemicals used in the manufacture of electronic equipment or pocket protectors :-). The study may be more useful in trying to figure the increased cancer rates in amateurs from all causes, but that's not what we are after.

>> Since any possible costs of the FCC's RF exposure standards for
>> amateurs are far below this number for any reasonable assumption
>> of the odds of risks incurred, it is worth doing.

>> Gary

But, since there is no proof and not even a body of repeatable, suggestive studies that there is a causal relationship between RF and cancer, there is no way to make a "... reasonable assumption of the odds of risks incurred ...". Therefore, ANY costs are unjustified on a scientific basis.

However, I think the FCC standards intend to address all safety issues, not just cancer. On that basis the standards are not unreasonable.

Thanks for continuing to write thoughtful comments on many of the issues that arise in this forum. I always enjoy reading them. In this case I object to what you wrote because I think it states the case more strongly than the scientific evidence warrants. Hence my excursion out of the woodwork.

How much POWER is required to cook a microgram of DNA? Not very damn
much,
because it is so small (~.1 mm cube). How much POWER DENSITY is required
to cook a microgram of DNA? I'm not sure, but probably about the same
amount required to cook the rest of the cell. If you know differently,
that is a key fact. Is there data?

>> And cooking isn't the only effect. In vitro experiments show that
>> a mere E-field potential, and a darn low one at that, can cause

I believe those effects are for low frequencies, not RF. Was your
comment about ELF and low frequency modulated RF in the following
paragraph meant to apply to this paragraph too? I know the low
frequency magnetic field experiments have been difficult to
replicate. There has been speculation about contamination of the
experiments with ferro-magnetic particles. Can you give a citation
about E-Field experiments? Still there has been no evidence that
these effects do cause cancer, just speculation that they might.

>> This should not be a surprise. If you've ever done chromatography,
>> you know that it only takes a very small potential to have effects

>> even die from some other cause first. Probability theory can't tell us
>> which set of rolls will be the magic ones, only that they are virtually
>> certain to occur if you roll enough times.

Since there has, as yet, been no body of research developed that shows a
causal relationship or even a repeatable statistical relationship
between RF energy and cancer, the odds must be VERY small indeed.

>> To improve our odds, we need to keep the number of rolls to a minimum,

From Tad Cook, KT7H
Seattle, WA August 30, 1996
To all radio amateurs

SB PROP ARL ARLP036
ARLP036 Propagation de KT7H

Solar activity was up last week. The daily solar flux was above the average for the past 90 days on each day over the past seven. The 90 day average also moved up a point from 70 to 71. Average solar flux was up six points from the previous week, and average sunspot numbers were up one point.

Due to a recurring coronal hole, geomagnetic indices have been unstable for the past day, and are expected to continue that way, slacking off toward September 1.

Look for solar flux to drop to 70 by September 3, and drop below 70 around September 11, rising above 70 again a week later, and to the mid seventies around September 23. Moderately unstable geomagnetic conditions are expected to return then as well.

Sunspot Numbers for August 22 through 28 were 12, 24, 22, 14, 16, 13 and 13, with a mean of 16.3. 10.7 cm flux was 72.8, 74.2, 74.6, 74.7, 74.2, 74.3, and 73.3, with a mean of 74.

Any recommendation would be suspect without the advisor knowing more
about your setup.

1. Does your receiver have a 50 ohm or Hi-Z input?
2. What type of antenna and feedline are you using?
3. Are you adept at building electronics equipment?
4. How much are you willing to spend for a tuner?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 30 AUGUST AND FORECAST FOR 31 AUGUST - 02 SEPTEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 29 Aug
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 5.6E+07 (normal)
X-ray background: A4.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
31 Aug 01 Sep 02 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 31 Aug: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active early in UT day
then declining to quiet levels

Estimated Indices : A K Observed A Index 29 Aug
Learmonth 9 422- 2222
Fredericksburg 16 27
Planetary 15 36

Observed Kp for 29 Aug: 4665 4334

2B. MAGNETIC FORECAST
Date Ap Conditions
31 Aug 13 Quiet to unsettled
01 Sep 10 Quiet to unsettled
02 Sep 8 Quiet
COMMENT: Geomagnetic activity is expected to return to quiet
levels over next three days.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
30 Aug Normal Fair Fair-Poor
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
31 Aug Normal Normal Fair
01 Sep Normal Normal Fair
02 Sep Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
30 Aug 4

Observed Australian Regional MUFs:
Darwin: mostly near predicted monthly values, apart
from 30% depression 06-07UT. Spread F observed local
night hours.
Townsville: near predicted monthly values.
Sydney: depressed 15-30% during interval 01-07UT. Frequncies
recovered during local night.
Hobart: depressed 15% during local day. Spread F observed
local night. Blanketing sporadic E observed 14-19UT.

Predicted Monthly T index for August: 9

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
31 Aug 10 near predicted monthly values
01 Sep 10 near predicted monthly values
02 Sep 10 near predicted monthly values
COMMENT: Ionospheric depression observed on 30 August for southern
region Australia. Northern region conditions remained mainly
normal. Normal conditions expected next three days.

Here is a summary of news items covered on edition #179 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 6-Sep:
-
1. Japan's New JAS-2/Fuji-3 Satellite Gets AMSAT Designation
2. UNAMSAT-B Survives Vibration Tests, Could Launch Next Week
3. Two Ham-Astronauts Selected to Train for Upcoming Mir Missions
4. FCC Forms 610 Still Safe to Use, Despite Expiration Date
5. Industry Canada Proposes New Radio Regulations
6. RAC Headquarters to Leave Kingston, Moving to New Offices
7. "The RAIN Dial-up" from Chicago
8. Special Event Station Calendar
9. Ontario Offers New License Plates with Call Sign and RAC Logo
10. Ken Oelke, VE6AFO, Appointed to RAC Admin & Finance Committee
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. 15th Annual ARRL/TAPR Digital Conference Set for Seattle
13. Weekly Propagation Forecast
-
Funding for the program's transmission and production expense was
provided this week by a grant from Dana Rodakis of St. Petersburg,
Florida, and the AJ1R repeater system, serving Florida's Sun Coast
on 51.84, 145.230, 147.285, 442.075, 443.625, and 443.95 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard
on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz,
```

courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Looking for MODS for the FT-8000. RT Systems should be coming
out with the software for 8000 in September.

Please Email me any info.

Thanks

That's 48%, Mike. We hang around down in the lower 25kc's because we
want to work 5 stations per minute, not 5 words per minute.......

You know who I am talking about. It is the ham that interrupts your conversation with another ham. The two of you could be in deep dialogue when along comes this KA1*I*. Does he have anything to add to the conversation? Of course not. He just butts in with some inane comment or worse COMMENTS. He might say "it is a nice day" or he might say "there is a hurricane and it can go in any direction" (something that is really earth shaking news).

I bet when he was younger he always barged into his parents CLOSED bed room door and surprised them in the act in order to tell them the sun came out.

Do you know who I am talking about? I am sure there are many of him.

Burt

>year old radio on 9600 baud packet, I might get reamed too.

Well, Jim, I guess you don't read my posts for the same reason you
don't read Gary Coffman's posts - you might accidently learn something.
However, this doesn't stop you from Drewing, oops, I mean spewing out
comments anyway ;-).

If you'd read my posts, you would have noted that I was explaining
that Greenhalgh's _modern PLL radio_ is not suitable for 9600
baud. Furthermore, if you'd thought about what I wrote, you'd
discover that many older crystal-controlled radios are suitable
for 9600 baud packet. In fact, some of the best and most popular
radios at 9600 baud are Motorola Mitreks, most of which are older
than ten years. Also excellent are Maxars, Maxar 80s and Flexars
(the Flexar I'm currently using for 9600 baud here is from 1980!).

What you apparently did was skip over all the technical content and
home in on Greenhalgh's strawman "not everyone can have the best
radios money can buy" whining. I never said he needed the best
radio money can buy - I simply pointed out that his PLL radio
in unsuitable for a number of technical reasons.

Selling 5 1/4 disks cheap
I've got boxes of 100. I will sell each box for $15.00

1 Bernouli Drive 44 SCSI
6 disks (these are $80 brand new a piece)
SCSI Adapter card
This is great for a backup system but also can be
used as removable HDs. They are fast enough to
run any game.
Selling for $200.00 OBO

1 640K D-Ram CARD
Doubles your conventional memory. Think of the
possiblites. You will never have to configure your
memory again for conventional memory.
Selling for $20.00
Add $10.00 for 386 MAX, the 1st memory
manager. Never get the "OUT OF MEMORY"
sign again.

Hard Drives
Conner 40 megs - $15.00 (name brand)
Kalok 105.2 megs - $35.00
I'll sell them as a pair for $45.00 OBO

1 16 BIT IDE/FDC Controller $15.00
2 FDC ports
1 IDE PORT

1 16 BIT SUPER I/O Controller $25.00
1 IDE port
1 FDC port
1 Serial port
1 Parallel Port
1 Game Port
Can expand to another serial port
It's a SUPER I/O and is fast as VLB.

1 Boca Robotics 14.4 FAX MODEM $40.00
half card so it saves you space
Includes: manual, box, disks, like new

1 EXTERNAL FAX modem $40.00
8 indicator lights
Can be used by MAC or PC
Has Serial or paralled hookups

DC Supply

***Both modems come with FREE INTERNET trials.

SOFTWARE

1 Sam and Max Hit the Road CD-ROM -$15.00
Classic Lucas Arts Adventure Game
($50.00 brand new)
Has full voice and sound
4 free Audio Tracks
Playable Rebel Assualt, Day of the Tentacle,
and Indiana Jones demos.

2 RPGs Populous II, and Dark Legions. Original Disks
I'll sell them both for $20.00. Must sell as pair.

MISCELLANEOUS

1 Stereo Amplifier/Equalizer - $20.00
Has 5 bands for frequency equalizing
4 inputs/outputs
Add $20.00 for TWO - 3 way High Performace Stereo speakers

2003. ZS6AFL has passed away - condolences to the family please

THIS IS TO ANOUNCE THE SAD LOSS OF ZS6AFL - GORDON KNAPP, WHO PASSED AWAY ON THE 24th AUGUST 1996 AGED 73. THE CREMATION SERVICE WAS HELD AT THE ST MARY�S CATHOLIC CHURCH RIVONIA ON FRIDAY 30th AUGUST. HE IS SURVIVED BY HIS WIFE JOAN, CHILDREN GORDON, CHRISTINE, ANDREW AND ROBERT AND GRANDCHILDREN: MICHAEL, CHRISTOPHER AND PHILLIP.

HERE FOLLWS THE EULOGY GIVEN AT THE CREMATION SERVICE.

EULOGY - GORDON EDWARD WILLIAM KNAPP

Gordon Knapp was born in the East End of London in 1923. He overcame the obstacles of a hard and poor childhood. On the outbreak of World War 2 he volunteered for active duty where he excelled in the signalling corps. When the call came for the formation of a Commando unit, he readily gave of himself, distinguishing himself for his country with the No 4 Commando�s.

This is where his love of the radio came from. A passion that he kept throughout his life. He maintained this hobby right until his passing as an active member of the Johannesburg Radio League, where ZS6 AFL�s Morse Code lessons will be sorely missed.

His other hobby, photography, helped give him his strange and wonderful view on life. A talent that he passed on to the rest of his family - in fact we ALL have a strange and wonderful view on life!

What can be said about such a complex personality, how do you sum up a life in a few words? It�s impossible. He was loveable, infuriating, strong willed, had a strong sense of family values and a remarkable sense of humour. He loved and was loved by a wide spectrum of people - young and old alike, as we can see by the attendance at the church today. He spanned generations as a friend and mentor. Although he, and us as a family, moved around the country with monotonous regularity, he made friends wherever he went.

It was a blessing that his passing was so quick, without the agony of months of hospitalisation. It was the way he would have wanted it - keeping all of his faculties to the end. The Knapp family would like to thank all of the wonderful people who have bolstered our spirits, sent condolences and generally been with us during this time of bereavement. Were all very glad to have known and loved Gordon, loving husband, father and friend, warts and all.

Goodbye, and thank you, Gordon, for everything that you have given us in our lives.

Rest in peace - you deserve it.

Please send messages to tombi@iafrica.com -- all messages will be forwarded to the family.

2004. Who Do You Hear on HF?

Who do I hear on HF?

1) OLDE FAHRTZ spending endless hours complaining about their health problems.

2) OLDE FAHRTZ spending endless hours talking about what type of spark-gap transmitter they used to use prior to World War II.

3) OLDE FAHRTZ spending endless hours bellyaching about the no-coders on the VHF/UHF bands and how "we need to make sure 'they' don't get access to 'our' bands down here."

4) OLDE FAHRTZ spending endless hours arguing with each other, causing malicious interference to each other, and using language that makes CB look like a Sunday School picnic. Is it CB Channel 19? Why no, it's the 75-meter ham band!

Is it any wonder that the bands are under attack by commercial interests?

You forgot number 5

4) YOUNGE SQUIRTS spending endless hours complaining about OLDE
FAHRTZ!!

Somehow your gross generalizations forgot to mention the maritime mobile
nets, the emergency communications during real disasters, the
international goodwill conducted on the bands daily, the enormous
dissemination of technical information, the National Traffic System, aid
to Servicemen, and MARS.

The Olde Fahrtz can tell you a thing or two about history and
achievement -- because they made it all happen. The last 80 years are
the pinnacle of achievement for this nation -- and the Olde Fahrtz did
it all (and still are) -- from medicine to the moon. They have conquered
diseases, fought the nations wars, hurled mankind to the moon, raised
YOUR standard of living to unbelievable heights.

It will be interesting to see how well you Young Squirtz do, you have a
tough act to follow OM!!!

AC6V neither Younge or Olde
But merely an Amateur Radio Operator -- how about you???

Perhaps you can detail for me a list of all the HF bands currently
under attack by commercial interests. A simple list, just listing the
band and the commercial interest that wants it will suffice.

I still remember an entertaining article in QST back in the 60's (I think)
by a Ham who designed what he called a "By Golly" filter. He had tired of
hearing all our cute little ham-isms, so he built this unusual audio filter.

It took a jargon-laden statement like "Well, fine business Old Man. You
have a very Q5 signal down here at this QTH, by golly!" and turned it
into "...You have a ... signal ...."

The times haven't changed much in that hamming is a talking sport, and
many of us seem eager to use more words rather than fewer. I sometimes
run on too much myself.

Do NOT do this! This dickhead is, as it typical for him, just spewing noise. Unfortunately, in this case, taking his noise seriously can have expensive consequences for the uninformed.

It is a sad state of affairs when cretins such as this have to resort to vandalism to elevate their egos above their sorry natural resting place.

OK ... for what price? $5 a copy? At that price, the "membership" amounts to a discounted subscription. That is a good deal for readers (financially), but a bad deal for the "subscriber-only-members" who feel that the ARRL is NOT representing their desires and interests and for the majority of US hams who are NOT "members" in any sense.

The inflated "membership" that ARRL claims to "represent" to the IARU and the FCC is a stinking pile of misrepresentation to those bodies.

Every day as I read the cw/no_cw threads on the net I become more and more convinced that it's time for a serious challenge to the ARRL.

Buddy,

I AM a "member" so I guess, even by your standards, I have a RIGHT to
bitch.

And I DID vote the last time I received a ballot from the ARRL.
Actually, it was a write-in that said "None of the establishment lackeys
listed above is acceptable."

Since I have established my right, I'll say it again "The ARRL is run by
a bunch of outdated old cronies who are not in touch with nor
representating the REAL interests and views of the majority of the US
ham community and, therefore, does not deserve the "clout" that it has
at the FCC nor its status as the sole US "representative" to the IARU."

I sincerely hope that I've made my view on the subject abundantly clear.

Well said Dana ... if my memory serves me correctly, you're not a
"barbarian" (staunch, 100% remove the CW test requirement advocate) like
me ... I appreciate the honesty with which you approach the dabate,
however.

It IS very interesting to see how the "keep the code" folks resort to
personal attacks and attacks on one's character when one disagrees with
them.

I know that at times I get more than a bit emotional over the issue and
that I tend to refer to the pro-code folks as the "CW olde fartz" but
that's meant to be illustrative of the "long for the old days, resist
progress" mentality that they espouse, not to imply that I think they're
all morally degenerate, horrible people. I know may very nice CW olde
fartz ... I actually like many of them in most respects ... I just
disagree with their views on the code and the future of amateur radio.

Gary,

I'm aware that the ARRL claims to be surveying both members and non members ... as I stated before, I don't trust them not to "fix" the results.

Surveys and statistics can be manipulated to one's own purposes so easily as to render them useless for much beyond generating "data" to support one's foregone conclusions.

Besides, there will be one hell of a lot more copies fo the survey sent to members via QST than will fall into the hands of "the barbarians".

It will be very easy for ARRL to slant the "results" to suit their purposes.

Perhaps a more accurate assessment could be obtained by mailing a ballot on the issue to EVERY licensed US ham, with the reqirement that it be executed and returned or the license would be revoked? This would serve two useful purposes ... 1) get a more representative view of the opinions of ALL hams , and 2) afford the FCC a mechanism for purging the license roles of all the Silent Keys and totally-inactive-couldn't-care "hams."

This would still not be a perfect mechanism to decide yes or no on the issue of keep/abandon the CW _testing_ requirement, because it would not include the views of wannabe hams.

The point is that it's the FCC's obligation to decide the future of ham radio, not on the basis of what the ARRL and its "members" want, but

rather on the basis of what best serves the "public interest."

My view is that the public interest would best be served by a vital, growing, technically-progressive amateur radio service, not a bunch of increasingly senile old-timers whose primary interest is in protecting "their" bands from newcomers and new modes that they can't comprehend.

Crowding is NOT a valid reason to "close the door" to admitting new hams. It does, however, argue in favor of encouraging the use of more spectally-efficient techniques so that more can be accommodated.

>>They operate there and say "listening on ____ kHz" so they don't get

Why don't you try REAL hard to read what I wrote and understand what I SAID?

It was exactly my point that the reason DX tends to congregate in the portions of the band (where most US hams can't go) is precicely to avoid being stomped on by lids who passed a 13+wpm code test but can't properly operate an HF station (either technically, vis a vis the over-driven speech processors and linears that are not linear, or in terms of basic operating courtesty and proper proceedures.)

In <19960830.093039.12478.5.rcrii@juno.com>, rcrii@juno.COM (Ron C Rohrbaugh II) writes:
>I guess there are differnt types of people, some who accept challenge
>and those who complain about it.
>Ron N8TPM
Ron,

There are many challenges available to those who have an interest in ham radio. Designing new hardware, developing new protocols for more efficient sharing of our spectral resources, building new ham satellites, training others in the technical skills necessary to design and build their own gear if they wish.

I work for a large (about $2B in sales this year) company. Our employees face many challenges every day in the course of performing their duties. However, our management is smart enough to avoid placing unnecessary roadblocks in the way of employees who are trying to reach a goal. That, coupled with the fact that we've hired a lot of very talented people is why our company is so incredibly successfull.

If our HR department started requiring a CW test before an engineer could be hired, we'd have a hell of a lot less engineers ... and be a much smaller company ... and be a hell of a lot less successful.

Just as the CW test is not relevant to my company's employment criteria, it has become irrelevant as a requirement for a ham license. There are a lot of other things to do and to contribute to in ham radio and we'd be a lot better off if we eliminated the unnecessary roadblock.

And please don't presume to characterize me as someone "who'd rather avoid a challenge than face it" ... you don't KNOW me, so you're not qualified to make that judgement!!! ... I've faced plenty of challenges ... from the technical challenges of my career, to 4 years with a wife dying of breast cancer, to a two year sailing voyage from California to Florida in a 42' sailboat ... and many others.

A "challenge" is an adversity that one chooses to overcome because it's either unavoidable or an inseparable part of a worthwhile goal ... a roadblock is simply an artificial barrier that has no purpose but to deny entry.

I'm totally confused after reading all of the posts here on the Usenet groups. What is the difference between ham and CB radio? Do you need a license to be a ham?

Isn't CB radio much better and cheaper?

Just wondering.

Mike

Carl-

Just out of curiosity, would you care to assign a number to that "lots"?
It seems reasonable to ask what you mean by the term when you ask others
to accept it as part of your argument.

i'd like to read some examples of this last statement, i personally find it to be erroneous. Are you referring to 40
meters, 80 meters??? 10 meters??? just where can't most hams operate???

actually i find that the dx tends to congregate in area's the US general class licensees can't go, which I feel is a shame.
The dx windows seem to allow more than enuf advanced and extra class US licensees access to those stations
operating "DX"

and working split has been around alot longer than the no code or "dumbed down" testing. But then again, it
seems that europe has more than it's share of non courteous operators as well. It has nothing to do with non linear
linears or poor operating habits persaye

Newsline report number 994 with a release date of Friday, August 30, 1996 to follow.

(*****
The following is a QST

Jamming police puts three people behind bars in Arizona. Find out more on Newsline report number 994 coming your way right now!

(*****
THREE DETAINED IN MESA INTERFERENCE CASE

Three people have been detained in Mesa Arizona for interfering with emergency service and Amateur Radio communications and others may be taken into custody in the case. On Friday evening August 16th and Saturday morning August 17th Mesa police, with the help of Arizona Repeater Association's Interference Committee, FCC personal and several Mesa hams, executed search warrants and detained three individuals who were suspected of causing interference. This by transmitting on police, fire, and several other agencies channels. Their alleged interference consisted of transmitting false officer emergency calls, hot tones, using profanity and describing sex acts on the police channels. This has interfered with police and fire traffic and caused delays in the ability to dispatch emergency traffic.
Local Mesa hams say that they believe that these same individuals are also believed responsible for malicious interference, bomb threats, and 911 abuses on numerous local amateur repeaters. Hams say that it was these transmissions that lead the Interference Committee to their locations. Communications equipment found at their residences, including radios, computers, and even their telephones has been seized and numerous charges

are pending. They could also face sanctions from the FCC as well. Its believed that at least two of the three are licensed hams.

(*****
HAM RADIO CIVIL RIGHTS SUIT FILED

A ham who was barred by a civil court from operating on a Southern California two meter repeater says that the judgement violated his rights to freely express his views. Timothy Seawolf KJ5KE of Quail Valley California has filed suit in United States District Court for the Central District of California against the Claremont Amateur Radio Club, its board of directors, all members past and present and attorney Sidney L. Radus, N6OMS.
KJ5KE contends that the Claremont club and its members conspired to obtain a restraining order in state court that prevented him from exercising his right to speak on certain radio frequencies authorized by his Amateur Radio license. Seawolf, who is acting as his own attorney is seeking a federal court order that overturns the state action that bars his use of the Claremont club repeaters. He also demands free access to club meetings and ten million dollars in punitive damages.
Seawolf's suit was actually filed earlier this year but was held low key. Its existence came to light only recently. This after rumors began circulating in local ham radio circles that indicated one or more civil rights groups were getting ready to offer him legal aid. So far that has seemingly not materialized and no trial date has been announced.

(*****
HAMS PITCH IN DURING ILLINOIS FLOODING

Ham radio was the hero of some recent midwest storms. Early on the morning of Thursday, July 18th, heavy rains hit Northern Illinois, causing massive flooding over a large area. Within DeKalb County Illinois nearly 240 mobile homes were either destroyed or severely damaged. Many other residences were also affected as a result of the floods.
With the assistance of the Kishwaukee Amateur Radio Club, the American Red Cross and the Salvation Army were able to respond during the early stages of the disaster. Using a 2 meter radio system that had been set up at the local Red Cross chapter in DeKalb, and the WA9CJN club repeater operating on a standby generator, volunteers were able to communicate with the Salvation Army as they arrived to set up canteen services at one trailer park in Sycamore. Other hams assisted the Red Cross at another trailer park in the town of Kirkland.
Later that day, the Salvation Army set up a shelter for the Sycamore residents, and the Red Cross established a shelter in Kirkland. Both shelters benefitted from the ham radio link until regular telephones could be installed days later.
Over the next few days, club members proved invaluable as they pitched in to help with damage assessment, administrative duties, mass care and logistics. Nearly two dozen KARC hams volunteered their time and resources to help out in this disaster.

(*****
ARRL DISQUALIFIES TWO CANDIDATES

Two hams have been disqualified to run in this years ARRL divisional elections. Amateur Television Quarterly Magazine publisher Henry Ruh, KB9FO wants to be the Director for the leagues Central Division and filed a petition to run again longtime incumbent Ed Metzger, W9PRN. But on Friday, August the 24th, the ARRL denied Ruh's petition. The league says that a conflict exists because Ruh still legally owns ATVQ Magazine. Ruh says that he is in the process of selling the publication, but the sale has not been completed. The ARRL says that it is required to make its determination of eligibility based on the situation as it exists now, not on the basis of how it might change in the future. As such, Ruh cannot run for office at this time.
In the Hudson Division, a ham previously told he was ineligible to hold ARRL elective office but who filed to run anyway has also been disqualified. Benjamin Friedland, K2PBP, is a director and member of the executive committee of the Industrial Telecommunications Association. The ITA is a membership organization of industrial and land transportation radio licensees whose interests in matters before the FCC potentially are in conflict with those of the League. Friedland's interest in the ITA arises from his business. He is listed as president and general manager, and 51% shareholder, of the Morristown & Erie Railway, Inc.
Ruh and Friedland were declared ineligible because each is involved with a business connection that is contrary to Article 11 of the ARRL's Articles of Association. Both have advised of their disqualification and also of the procedure to be followed should they wish to appeal the decision to the full Board.

(*****
DECLARED ELECTED

In a related story, several candidates did run unopposed and have been declared eligible and elected. In the Northwestern Division Greg Milnes, W7AGQ is the Vice Director for the next two years. The same for Vice Directors Dennis Bodson, W4PWF, in the Roanoke Division, Walt Stinson, W0CP in the Rocky Mountain Division, Art Goddard, W6XD in the Southwestern Division and Barney Boone, KJ5AE in the West Gulf Division.
And the West Gulf Division also has an old face returning to the ARRL Board as Director. That of former League Vice President Jim Haynie, WB5JBP.
Ballots will now be mailed out to decide the results of elections where two or more candidates have been declared eligible to run for office. Perhaps the most interesting contest to watch will be in the Leagues Hudson Division where two relatively unknowns will be vying to replace Director Paul Vydarney, WB2VUK. Vydarney recently announced that he has decided not to stand for re-election.

JAREMA ON FUNDING

The following is a repeat of a story aired last week dealing with the funding crisis currently facing Newsline. Here is our support Fund

Administrator, Andy Jarema, N6TCQ:

"My job is to make sure that the bills get paid, and I'm here to tell you that I'm about to pull the plug. Pull the plug on over 19 years of responsible, up to the minute reporting of the news that matters to you, the radio amateur. There's been a fleet of caring amateurs, just like you, bringing you the news as it happens. As amateurs, we're committed to the concept of bringing you that news voluntarily, without monetary compensation.
Many of you have stepped up to the plate to help us, and we appreciate every effort. But the sad fact is that it takes an average of $1000 per month to keep Newsline on the air, with the online services, long distance to get the voices of the news when it happens, phone lines for the news feeds, postage services, and the like. For the past two years, voluntary contributions have averaged less than $500 per month. I don't have to ask you to do the math.
How many amateur radio clubs are there in the U.S., or in the many other countries where Newsline is heard, or even more where it is now read and heard on the Internet? If each club would contribute just $50 to $100 a year to keep Newsline on the air, you would achieve the goal of keeping the latest amateur radio news flowing to you.
As an MBA, and a CPA, and owning, building, then selling my own business, I don't like losing propositions. You've heard hams refer to "hitting the Big Switch". Newsline report number 1000, on October 11th will be our last newscast, unless you help now in a major way. We have no choice.
Again, our address:

Newsline Support Fund
P.O.Box 660937
Arcadia, CA
91066-0937

Don't worry about the plus four if you didn't get it. It's up to you.

(*****
AUTHOR'S NOVEL FEATURES AMATEUR RADIO

Birmingham, Alabama, author Don Keith, N4KC, will have his second major novel published as a hardback original by St. Martin's Press late this year. Entitled "Wizard of the Wind", it is set in the world of radio broadcasting, but has elements pertaining to amateur radio as well.
The book tells the story of a young man who is fascinated by the magic of radio when he first hears distant signals and early rock and roll music on an old upright Zenith radio. He later begins a career as a disk jockey, sees the promise of FM, and begins to build an empire of stations. But along the way, he loses sight of the magic that drew him to broadcasting in the first place and almost loses all he has created as well as those he loves most.
One of the principal characters in the book is a ham radio operator, and he uses old fashioned "fox hunting" techniques to help track the "bad guys" in a crucial part of the book's narrative.

Keith spent over twenty years in radio as on air personality, manager, owner and consultant, and currently works with a company which develops and markets computer software for the broadcast industry. He has been a licensed ham since 1962 and currently holds the Amateur Extra class FCC license. He is a former officer in the Birmingham Amateur Radio Club and was its first Public Information Officer. He is most active on 20 meter CW and 2 meter FM.
N4KC's first novel, "The Forever Season", was also published by St. Martin's Press, and continues to enjoy tremendous commercial and critical success. The trade paperback edition of that book will be released before months end.

(*****
QSLS SOUGHT FOR HAM RADIO COP SHOT IN LINE OF DUTY

From our friends at the ARRL Letter comes word that Dave Harvey, KE4VDP, of Lithonia, Georgia, is recuperating from gunshot injuries that almost cost him his arm and still could cost him his career as a police officer. On July 13, Harvey, who's with the DeKalb County Police Department in Decatur, Georgia, responded to a call of shots fired. He came face to face with a man armed with a rifle who fired two shots at Harvey, hitting him once, in the left forearm, before two other officers returned fire and killed the man.
Harvey is out of the hospital following surgery, but he's been told he might lose much of the use of his hand and that he might never again be able to work as a police officer. Even so, Lt. J. E. Hanson of the DeKalb County Police Department says he remains very optimistic that Harvey will be able to return to duty.
Another friend and colleague, Jim Sheppard, KT4FD, says Harvey has been a ham for about a year and a half and has never received a QSL card. During Harvey's recuperation, Sheppard is requesting hams send KE4VDP their QSLs to cheer him up and wish him a speedy recovery. Sends cards to:

ARRL NEW ENGLAND CONVENTION OFFERS ANTENNA WORKSHOP

The ARRL's antenna guru, Dean Straw, N6BV, will offer his workshop "Computer Aided Antenna System Design of HF and VHF Stations, Including the Effect of Local Terrain." This, during the ARRL New England Convention, Friday, October 4th, from 3 to 9 PM, in Boxboro, Massachusetts.
Dean Straw edits The ARRL Antenna Book and regularly contributes to QST. Space at his symposium is limited, so register by October 2. To do so, call Peter Budnik, KB1HY, at area code (860) 594-0239.

(*****
CYBERHAM MAGAZINE

A new ham radio magazine that capitalizes on the fact that over seventy percent of all hams own computers will be on the market by early September. CyberHam magazine is the Brainchild of Gene and Shari Harlan. Gene is WB9MMM while Shari is WB9SFT. The magazine will feature material for both the computer literate ham and those who want to become computer literate. For more information contact Gene and Shari Harlan at 1 (800) 557-9469.

(*****
NEW ARRL STAFFER

Former Cushcraft Amateur Sales Manager Ed Hammond, WN1I, has joined the ARRL staff. His primary responsibilities will involve publication sales and membership recruitment activities. Hammond is already out speaking to radio clubs on behalf of the ARRL and Amateur Radio.

(*****
JAS2 NOW FO-29

The recently launched Japanese ham radio satellite known initially as JAS 2 and after its launch as Fuji 3, has another new name. Call it Fuji Oscar 29.
The name change was the result of a note from AMSAT North America president Bill Tynan, W3XO to Fujio Yamashita, JS1UKR Director of the Japan Amateur Radio League Technical Laboratory. In it, Tynan asked if JARL wanted to designate Fuji 3 with an OSCAR number. Yamashita responded that he had communicated with the JARL President Shozo Hara, JA1AN who agreed with the name change. As a result, the new and permanent name for the satellite is Fuji Oscar 29 or simply FO-29.

(*****
STS-79 SAREX

Astronaut Carl Walz, KC5TIE, an EVA specialist on Atlantis shuttle flight STS-79 has passed his Technician class exam. He and astronaut Jay Apt, N5QWL, will operate SAREX during the mission to ferry scientific equipment to the Russian Mir orbital complex.
Walz studied for his test while on an airliner returning from training in Russia. He says that he found it much easier to grasp than the Russian language training the crew has been taking for the past year. Astronaut Apt studied for his VE certification on the same flight and participated in KC5TIE's test session.

(*****
WILLIAM J STEVENS, W6ZM, SK

Some sad news. Long time friend and former ARRL Director Bill Stevens, W6ZM, of San Jose, California, died August 17. Bill Stevens was age 84 and served as Pacific Division director from 1978 through 1985. The Board elected him vice president at the 1986 annual meeting; he served one term. He is survived by his wife Delphie. A memorial service was held for Bill on August 24th.

(*****
DX STAMP

In DX, Pitcairn Island in the Pacific, famous as the final refuge the mutineers from the HMS Bounty, is issuing four Amateur Radio stamps on September 4, 1996. One 20 cent stamp lists the call signs of this year's members of Pitcairn's Amateur Radio club; two $1.50 stamps show VR6IM requesting and receiving medical assistance, and a $2.50 stamp shows Andrew Young, VR6AY, Pitcairn's first amateur, in 1938. Pitcairn has the largest population of amateurs per capita of any country in the world. Nearly one of every four of the 50 or so people on the island is licensed. If you're interested in Pitcairn Island, check out the Pitcairn Island site on the World Wide Web.

It's a shame that over the last 4 years I've been attending rallies, that at each one which the RSGB dained to "attend", the stands have ALWAYS been attended by {if anyone at all} bored females {not that I've got anything against that} who only wanted to sell either membership or publications. There has NEVER been any attempt towards dialogue! This is both in the midlands & the London area...

Yes a lot of the work is done by volunteers, who are very willing & even able, it's just unfortunate that the so called professionals do not act in a like manner.

As for the RSGB not being allowed to answer via packet, if you read your BR68, clause 3, subclause 3, it clearly states you can IF you are a non profit organisation established for the furtherance of amateur radio. So these questions I MUST ask:-

1)Is the RSGB mainly interested in making a good profit, indeed any profit & if so when are you going to start worrying about the ongoing drop of members?

2)Isn't the RSGB supposed to be for the furtherance of amateur radio in the UK not the furtherance of some clique of supposed professionals?

> but do not have the courage to raise their views face-to
> face when given the opportunity.

I HAVE TRIED, the only person who actually listened & indeed helped, YOU removed from office & by doing so caused a lot of the publicity you're complaining about. The only reason you as an organisation dislike packet is that YOU cannot control it, despite the efforts of the DCC who have been trying to stiffle it.

> Criticism of HQ staff is acceptable, because the staff and I
> are paid to service the needs of the membership. However such
> criticism should not be on packet network, because HQ staff - as
> professionals - are prohibited from using amateur radio to reply.
> If we are failing in our duties then I would welcome any

> That would give me and the staff the opportunity to make any
> changes required to improve the service.

I have to ask why do you ask for facts & figures when your complete "posting" is emotionally based, there are no facts or figures included at all.

I don't like the arguments & fighting but bulletins such as the one you posted will do nothing to stop what is going on! ONLY if & when you, as an organisation, start to listen once more to the amateur radio fraternity, stop giving jobs to the "boys" {or "girls"} & get back to the furtherance of ALL the amateur radio fraternity in this country will things ever get better. One final question:-

If you're so worried about what's going on, what are really trying to hide?

Funny, but I seem to recall a post to just the reverse only a few weeks
ago.

>I know that at times I get more than a bit emotional over the issue and
>that I tend to refer to the pro-code folks as the "CW olde fartz" but

So, using the term "CW olde fartz" is okay, but using the term "no-clue"
to refer to codeless techs is not okay?

Sorry, can't have it both ways. Either you be completely civil in your
discourse, or don't complain when people spit back.

Okay, I'll buy into this line of reasoning. Where are all the technical
innovations promised to us by all the the techno-genius wiz-bang kids that
the codeless license would attract? I'd like an itemized list. Its
been five years now, certainly there are one or two that are now
commercially available.

>>>They operate there and say "listening on ____ kHz" so they don't get
>>>buried in their own pileups by the US lids who can pound CW but don't

>SAID?

Testy, testy. Now calm down Carl. I wouldn't want you to start hurling
insults in face of your last post telling us how much you want to keep
the discussion above-board.

>It was exactly my point that the reason DX tends to congregate in
>the portions of the band (where most US hams can't go)

All these foreign hams decide to use the extra-class DX windows
and operate CW to "escape" from poor "general" class operators? Did
I get that straight?

So, what you're saying is that the extra class license examinations
(along with that 20wpm code test) somehow give us better operators on

HF, is that it? (Must be, since all these foreign ops want to talk to them.)

Oh, and maybe you can tell me: how much "foreign dx" (foreign-to-non-US contacts) is in that lower 25kc? Just so I know, because I wouldn't want to make a statement like "funny, most of the dx I hear in the lower 25kc seems to be foreign ops contacting US ops".

Now, true that there is much contact outside the US frequency allocations, but we can't say that foreign ops are operating within the frequency allocations merely because they don't want to work in ours.

No, you don't see many highly-talented people (such as MDs) scooping
ice cream because you can pay some moron $4.15 (or whatever minimum
wage is these days) to accomplish the same thing.

>Please READ the posts here and if you diassagree with what was truly

Have you tried Tucker Electronics ??? They have a Web page.

Also, pick up a copy of "Popular Communications" magazine. Many smaller companies advertise in the back and they have better prices.

Hi Mike for ham radio see URL:
http://www.smartpages.com/faqs/radio/ham-radio/faq/

For CB see URL:

http://www.smartpages.com/faqs/radio/cb-faq/

Should answer most of your questions.

I would suggest that you ignore responses that pit one versus the other
and make up your own mind. Neither is "better" it depends on your needs
and goals.

Good Luck

Are you *sure* you are familiar with the architecture of the newsbase
structure in Jim's Forte newsreader, Gary? Also, your concept of an
`original' newsgroup which you say can be distinguished from any
cross-posted groups was itself highly *original*. I am sure that if
you were to sit down and invent a news transport system of your own
design from scratch and you ignored NNTP and RFC997, you could
actually make one just the way you describe it.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 31 AUGUST AND FORECAST FOR 01 SEPTEMBER - 03 SEPTEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 30 Aug
Daily Proton Fluence >1 MeV: 1.3E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.1E+08 (moderate)
X-ray background: A5.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Sep 02 Sep 03 Sep
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Sep: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active

Estimated Indices : A K Observed A Index 30 Aug
Learmonth 12 3234 3222
Fredericksburg 13 17
Planetary 13 14

Observed Kp for 30 Aug: 5341 1223

2B. MAGNETIC FORECAST
Date Ap Conditions
01 Sep 10 Quiet to unsettled
02 Sep 8 Quiet
03 Sep 8 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
31 Aug Normal Normal-fair Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
01 Sep Normal Normal Fair
02 Sep Normal Normal Fair
03 Sep Normal Normal Fair
COMMENT: Good HF conditions are expected over next few days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
31 Aug 25

Observed Australian Regional MUFs:
Darwin: mostly enhanced 15-30%.
Townsville: near predicted monthly values.
Sydney: No data during local day, enhanced 15-30%
local night.
Hobart: near predicted monthly values.

Predicted Monthly T index for August: 9

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
01 Sep 15 near predicted monthly values
02 Sep 15 near predicted monthly values
03 Sep 15 near predicted monthly values

In some respects, you are correct. A CW test has become irrelevant in
some aspects of amateur radio.

So, 5 years ago we eliminated the CW test for access to 99% of all
amateur spectrum. Spectrum which, I might add, is under constant
threat of reallocation and is where new technical innovation in the
amateur radio service will take place.

On the other hand, CW still remains a valid, relevant portion of
other parts of amateur radio. 48% of all amateurs with access to HF
use CW. CW consistantly is a popular mode used by foreign DX stations.
A goal of the amateur radio service is to promote international
goodwill; thus a code examination helps ensure that people will be able
to communicate with these foreign stations. US amateurs are somewhat
stuck up, and often forget that foreign hams are not always technically
on par with the equipment that is available here.

Carl, why are you trying to bring the code debate over to .misc? Please
keep it on .policy (one of the reasons for .policy's existance). Just
because you're a tech with no HF privileges is no reason to use .misc
as your platform for espousing the elimination of the code tests.

Hello All...

I am currently producing a program to air on local cable access on Amateur Radio Awareness Day. I am looking for any hams interested in being interviewed via the Internet.

Hopefully we would be able to get voice segments from you using the Internet and something like Real Audio or True Speech. Please email me if anyone is interested...

Thanks...
Bill

How true!!!

A professional PhD level statistician I queried regarding the validity of certain published statistics recommended that I get a book that is considered a classic in professional statistical circles. Although it has a whimsical title, it does explain in detail how statistics can be manipulated to serve a particular purpose.

It is 'How to Lie With Statistics' by Darrell Huff, ISBN 0-393-09426-X, and is published by W.W. Norton & Company, 500 Fifth Avenue, New York, NY 10110 and 10 Coptic Street, London WC1A 1PU. My copy is copyright 1982, but that was its 44th printing, so especially since it's considered a classic work, I'm sure it's still available.

It's very good to have handy when somebody tries to make their point using statistics. This could be particularly useful between now and November 5!

2041. COMPARE ARRL & RSGB SURVEY INTRO

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-31 00:00:00 UTC
From: zut@cais.com
Message-ID: <Pine.BSI.3.93.960831235233.21913A-100000@cais2.cais.com>
Source record: 217895
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I'm sure you recall my posting what I considered to be serious faults in the ARRL's "WRC-99 Survey" that was mailed out to selected individuals and also appeared in QST's September 1996 issue. One of the most significant shortcomings I named was that the ARRL's questionnaire focused ONLY on the international HF Morse code requirement and that it totally ignored the other seven WRC-99 topics.

As you may know, the Radio Society of Great Britain (RSGB) also conducted a survey, but theirs focused on the ENTIRE proposed WRC-99 Amateur Radio agenda rather than just the S25.5 international Morse requirement. To give you an idea of how concerned they were about informing their membership, as compated to what the ARRL did, I have keyed in (by hand - please forgive errors) the complete text of BOTH introductions for your consideration. Decide for yourself which organization cares the most about informing and representing its membership and, based on the introduction alone, which probably conducted the most objective and impartial survey.

As you contemplate this question, keep in mind that about half of UK Amateurs are RSGB members while the ARRL has only about a 20% share of American hams. Think about why the ARRL can't seem to attract and keep more members.

All the ARRL Directors, Deputy Directors, and officers were recently furnished copies of the RSGB survey, so they are familiar with its content. Be sure and let your ARRL Director know how you feel, both about the two surveys, and while you're at it, why you think the ARRL has such a small share of the US Amateur population as members.

Tony Stalls, K4KYO
ARRL Life Member

****
ARRL "WRC-99 Survey" introduction as Quoted from QST, September 1996, pages 49 and 50.

We would like you to participate in a survey that will have important ramifications for the future of Amateur Radio.

The ARRL is developing positions on several issues that will arise at the 1999 World Radiocommunication Conference (WRC-99) of the International Telecommunication Union. The conference will review the international radio regulations pertaining to Amateur Radio. The international regulations provide the framework for the FCC regulations that govern us.

Decisions at WRC-99 will be made by government representatives who will be dealing with many issues, international Amateur regulations being only one

item. The United States position with respect to changing the international Amateur regulations will be heavily influenced by input from the ARRL. It is also important that Amateur Radio develop a worldwide position through the International Amateur Radio Union (IARU), so that governments throughout the world will hear a consistent message from their amateurs. The IARU position will reflect the views of its member-societies, including the ARRL.

To help in adopting positions on amateur issues to be covered at WRC-99, the ARRL Board of Directors has formed a WRC-99 Planning Committee. Determining the opinions of ARRL members and potential members on the most controversial issues is an important step in the committee's work.

A survey questionnaire is being sent to a random sample of ARRL members and other licensed radio amateurs. Any member who wishes to do so is welcome to respond to the same questionnaire, which is reproduced below. The responses from the random sample and the responses to this QST survey will be tabulated separately.

Please take a few moments to complete the questionnaire and return it to: ARRL WRC-99 Planning Committee, 225 Main Street, Newington, CT 06111. This is your opportunity to influence the positions that the ARRL will advocate to the US government and beyond. Thank you for your cooperation.

Tod Olson, K0TO
Chairman, ARRL WRC-99 Planning Committee
Director, ARRL Dakota Division

****

"RSGB Future of Amateur Radio Opinion Survey" introduction as quoted from the enclosure with the RSGB's official journal, RadCom.

THE ENCLOSED FORM is intended for you personally. Affiliated Societies should nominate one person to complete it on behalf, and indicate this in Q49. Family members, members of Affiliated Societies and non-members can input their views by requesting a form from: Survey Request, RSGB HQ, lambda House, Cranborne Road, Potters Bar, Herts EN6 3JE. Please do not just copy this form. Note that forms should be returned to Isis Research at the address at the bottom of this form, and not to RSGB HQ.

Although at first sight the issues may seem simple, they are very complex and require careful consideration. Your cooperation, therefore, in completing the survey form will be appreciated.

1. INTRODUCTION

THE INTERNATIONAL regulations affecting the Amateur Service are on the provisional agenda for the World Radio Conference in 1999 (WRC99). At WRC95, one or two administrations raised the necessity of Morse code being a mandatory requirement in Article S25 of the Radio Regulations. It was agreed that instead of considering just this one aspect, the wider issue

of the regulations applicable to the Amateur Service would be fully debated in four years time at WRC99. Although there has been much discussion about the Morse requirement over the last eighteen months it is now clear that this will only be one of many wider issues being considered.

IARU has formed a group to consider the future of the Amateur Service (Future of the Amateur Service Committee - FASC) to seek and co-ordinate input; it has already issued a discussion document to member societies. The main forum for debate will be at the next three IARU Regional Conferences: Region 1 in 1996, Region 3 in 1997, and Region 2 in 1998. The results of the discussions at each of these Regional conferences will be circulated to all Regions so that further inputs can be made. The Region 1 Conference will be this September, and it is essential that the Society representatives are aware of the views of amateurs in the UK.

The object of the survey is to obtain information dealing with three specific areas to help us make an input regarding the matters to be raised at WRC99 and their consequences for national licensing.

a) International Issues and the Content of the ITU Radio Regulations

The International issues relate to the definition of the Amateur Service and the Amateur Satellite Service and the regulations contained in Article S25 (reproduced below), which relate to the type of message allowed, third party traffic, emergency communications and the qualifications required to operate in the Amateur Services.

b) Matters Relevant to National Licensing

There are many licensing issues, from the RAE through the types of license to the privileges available, which have never been widely debated in the past. In this section we seek views on the classes of licenses available, the qualifications required to obtain them, technical and operating standards and their effect on band occupancy and EMC. Other areas include the examination structure and frequency of tests.

c) Personal Background Information

In order to help us assess views expressed on the two main areas mentioned above, we need a broad profile of those responding. This covers information about peoples' entry into amateur radio and their interests, such as bands, modes of operation and types of equipment used, and any specialist areas of interest, coupled with a personal profile, questioning professional qualifications, types of license held, etc.

2. BACKGROUND

WE ARE EXTREMELY concerned about the future of the Amateur Service. The spectrum currently allocated to the Amateur Service is under great pressure from other commercial interests, particularly above 30 MHz, due to the rapid expansion of consumer electronics.

In Europe particularly there is a rapid growth in the number of regulations and standards affecting commercial radio equipment, and unfortunately much of it is also affecting amateur operation, eg EC directives/standards, the possibility of type approval for amateur equipment, and other standards relating to the movement of equipment between countries. If amateur operation is restricted to equipment whose performance and facilities are defined in international standards, then technical experimentation will no longer be possible.

The Amateur Service

Currently, the amateur Service is unique in having many privileges: freedom from type approval, ability to use home constructed equipment, freedom to operate at any locations and use a wide variety of modes. One section of IARU (FASC) document is highly significant. It states (our highlighting):

It is of fundamental importance to administrations as well as to radio amateurs that the amateur service be limited to operators who are qualified both technically and operationally. Amateurs share the radio spectrum with a myriad of other radiocommunication services, and share their relatively narrow bands with one another. They must be qualified to assume the responsibility for the safe installation and proper operation of their stations. They must possess the ability to intercommunicate with one another, to ensure that their equipment will not cause harmful interference to other services in normal operation, and to resolve such interference whenever it may arise. They must understand the obligations that arise from the privilege of operating radio transmitters.

WE CANNOT OVER EMPHASISE THE IMPORTANCE OF THESE STATEMENTS

A high standard of technical knowledge, and interest in experimenting in radio communications, are essential to justify retaining our existing privileges. While there may be various classes of amateur license, and many specialist interests in different aspects of radiocommunications, the nature of their operation must justify the privileges used.

The Future of the Amateur Service can only be ensured if high standards of technical knowledge and operating are maintained, and its activities are not seen to compete with other commercial radio services. When looking at the future of the Amateur Service, therefore some issues wider than just Radio Regulations need consideration.

3. INTERNATIONAL ASPECTS

IN ORDER TO answer some of the questions it is important to understand the nature of the Radio Regulations and the definition of the Amateur Services.

The ITU Radio Regulations:

a) are an INTERNATIONAL TREATY between governments and should only deal with matters appropriate to that level.

b) must be acceptable to a majority of governments worldwide.

c) set the requirements that must be met by all administrations.

The decisions made at WRC99 will therefore have to reflect the views of amateurs worldwide, expressed via their administrations.

The Amateur Service is defined in Article S1.56 of the Radio Regulations as:

A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorised persons interested in radio technique solely with a personal aim and without pecuniary interest.

This definition does not appear to be up for discussion but has not changed since the introductions of international Radio Regulations, and would appear to be entirely acceptable for the foreseeable future.

The Amateur Satellite Service is defined in Article S1.57 of the Radio Regulations as:

A radiocommunication service using space stations on earth satellites for the same purposes as those of the amateur service.

Article S25 of the ITU Regulations relates to the Amateur Service and the Amateur Satellite Serviced and is reproduced as follows:

SECTION 1. AMATEUR SERVICE

S25.1 #1. Radiocommunications between amateur stations of different countries shall be forbidden if the administration of one of the countries concerned has notified that it objects to such radiocommunications.

S25.2 #2 (1) When transmissions between amateur stations of different countries are permitted, they shall be made in plain language and shall be limited to messages of a technical nature relating to tests and to remarks of a personal character for which, by reason of their unimportance, recourse to the public telecommunications service is not justified.

S25.3 (2) It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties.

S25.4 (3) The preceding provisions may be modified by special arrangements between the administrations of the countries concerned.

S25.5 #3. (1) Any person seeking a license to operate the apparatus of an amateur station shall prove that he is able to send correctly by hand and to receive correctly by ear texts in Morse code signals. The administrations concerned may, however, waive this requirement in the case of stations making use exclusively of frequencies above 30 MHz.

S25.6 (2) Administrations shall take such measures as they judge necessary to verify the operational and technical qualifications of any person wishing to operate the apparatus of an amateur station.

S25.7 #4 The maximum power of amateur stations shall be fixed by the administrations concerned, having regard to the technical qualifications

of the operators and to the conditions under which these stations are to operate.

S25.8 #5 (1) All the general rules to the Constitution, the Convention and of these Regulations shall apply to amateur stations. In particular, the emitted frequency shall be as stable and as free from spurious emissions as the state of technical development for such stations permits.

S25.9 (2) During the course of their transmissions, amateur stations shall transmit their callsign at short intervals.

SECTION 2. AMATEUR SATELLITE SERVICE

S25.10 S6. The provisions of Section I of this Article shall apply equally, as appropriate, to the amateur-satellite service.

S25.11 S7. Space stations in the amateur-satellite service operating in bands shared with other services shall be fitted with appropriate devices for controlling emissions in the event that harmful interference is reported in accordance with the procedure laid down in Article S15. Administrations authorising such space stations shall inform the Bureau and shall ensure that sufficient earth command stations are established before launch to guarantee that any harmful interference which might be reported can be terminated by the authorising administration (see No. 22.1).

Hi Drew:
Could you name one commercial loss of the HF bands?
Can you name one commercial organization petitioning for HF bandwidth?
Your argument may have some merit, unfortunatly you picked the wrong
band as an example. If anything we have gained more HF frequencys
(WARC).
Also, your tuned to the wrong frequencys. Try increasing your code speed
and
check in to some QRP frequencys. Lots of fun people to QSO with, mostly
revolving
around things they have built etc.

Must Sell ASAP: (No reasonable offer refused):
(3) Uniden FPS910TS 900 trunked HT. 9 System, 9 group 'brick' radio (rather large, a tiny bit more than the BC1/200 HT). Comes with 2 brand new batteries, 2 older batteries, 3 rapid chargers (not available anymore, hard to come by!!!) and 1 vinyl holster (no belt loop, just more for shipping/travel. $175/ each, Invested much more into it. 2 currently programmed for TAC use.

(1) Johnson 9 channel 40?? (maybe 60) watt mobile. VHF. Was from Florida Sherriff or police which went to 800. Programmable by computer from Johnson Dealer. Must use external speaker (I can dig one out, standard 3.5mm plug), hand mike, and power cord included. GREAT radio. Scans, PL, everything. $250/bo.

(1)Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels PL _AND_ DPL, Keypad programmable, dual VFO, Dual watch, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (I Can't find this in the manual, I think it;s a hidden trick.) (PLEASE don't ask how to do it, I was overrun by more questions on how to do it than offers to buy..)Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $280/BO.

All prices plus shipping + COD. I am NOT a company, just a collector of stuff I no longer need. <GRIN>

ALL PRICES NEGOT.! I need to sell, so give me an offer!

>
Ron:
I do think the the FCC in their naive ways are trying to
address the
issue, unfortunately popular rhetoric got in the way. Laws must be made on
scientific facts not to calm the fears of the day. I noted the comments
of the various consultants. Hemmet & Edison the premier Communications
Engineering firm called the regulations caprious and arbitrary and with
little scientific fact. If the consensus is to abide with IEEE 95.1-1992
then
everyone should abide, not PCS is exempted by congressional act or
wireless industries by lobbying or Wayne Overbeck by being a self appointed
expert.

Well, Johnny, if you wanna be a Jr. G. Man, you gotta pay the price.
Besides, it's about time some of these diode chopping good buddies
figure out where the equipment newsgroup is. If this guy was interested
in MARS, all he has to do is fax his MARS license to the manufacturer
of the radio, and he can get all the MODS he wants. Problem is, he
is more interested in ambulance chasing than he is traffic handling,
that's how he wound up here.

New to the web "Ham Radio Crossword Puzzles". Just link to
http://www.sarrio.com and follow the links to the 1st ever interactive
crossword puzzle for ham radio operators.

The only catch: You must have a Java capable browser to view the
interactive puzzle. Netscape 3.0 and Micrsoft Explorer 3.0 are both Java
Capable.

I am also looking for hams interested in adding their words and clues to
future puzzle. I looking for puzzles written with questions for the
various license class test. These puzzle are a great way to test your
knowledge of the theory before you take the test.

The correct method for writting these crossword clues and word answers is
explained on the Crossword Puzzle page. Check it out and let me know what
how you like it. 73's Ray

But then again, it
>seems that europe has more than it's share of non courteous operators as well. It has
nothing to do with non linear
>linears or poor operating habits persaye
>

Agreed ... if you thought I was saying the DX was avoiding no-coders,
you're wrong. Use your <page up> key and read my words again ... it's
the 13wpm or better lids they're avoiding.

Haing passed a CW test clearly does not guarantee that one can properly
operate an HF station, nor that one will operate it with a reasonable
degree of intelligence or common courtesy. Most of the no-coders I've
met are courteous operators who want to do things right. I'd rather
have them on HF than the lids around 14.3xx MHz ...

To escape getting buried in the pileup, etc. is what I said.

>So, what you're saying is that the extra class license examinations
>(along with that 20wpm code test) somehow give us better operators on
>HF, is that it? (Must be, since all these foreign ops want to talk to
>them.)
>
No, that's not what I said ... they hang out there because there are
less US ops that can get on top of them there ... not because they'll
only work extras.

>Oh, and maybe you can tell me: how much "foreign dx" (foreign-to-non-US
>contacts) is in that lower 25kc? Just so I know, because I wouldn't want
>to make a statement like "funny, most of the dx I hear in the lower 25kc
>seems to be foreign ops contacting US ops".
>
Yes, they'll work US ops ... they're not rude ... but they avoid getting
buried by staying away from the areas where US ops can pile up on top of
them.

I really believe you know this and that you're just trying to blow
smoke, so I'm becoming less and less inclined to "debate" with you ...
it's clear that nobody will ever change your mind and I've got better
things to do ... like carry on discussions with people who at least
debate the issue in good faith ... even if we disagree.

>Clifton. NJ

Hi Dennis,

Not only did I use a Butternut HF5B, but I used it in Clifton NJ!

I chose this beam because of its small turning radius too and used it on a very old TV rotator (CDR AR22).

I loved the gain and the front to back ratio compared to a verticle that I had on the same lot (in the Montclair Heights section just off of the Route 46/3 merge).

Get it at least a 1/2 wavelength off of the ground and you will do fine.

Basically if I could hear the signal, I could work it, with some patience.

Tim,
Apparently you don't know Spew. Let me introduce him to you. The fact
that he can spell 'HF' amazes most of us. Asking him to explain things about
it is over his head. He can't 'tune in' to the QRP frequencies, as he doesn't
have a radio. (He hears voices in his head, so I guess he doesn't need one).
He can't increase his code speed, as he has no code speed to increase.
Trying to explain to him how he could enjoy ham radio is useless. He doesn't
want to enjoy ham radio - he only wants to troll on internet.

We should be more in tune, Mike, this is the 90's. People aren't poor
any more, they are 'financially challanged'. We need to think of something
to call these guys that is more hip. 'No-Clue' techs, the 'Nintendo-Nose Candy
Generation', things like that upset them.

How's about we have a 'Name The No Coders Contest' ? We'll even let THEM
help pick a name for themselves, afterall, they do so good with names they use
on internet, why shouldn't they help us come up with something they like ?
Cookie Monster where are you ?

I think we should call them the 'RF VIRGINS'. Or maybe we should call them
'MODE CHALLENGED AMATEURS'. What do you think ?

:
: i'd like to read some examples of this last statement, i personally find it to be erroneous. Are you referring to 40
: meters, 80 meters??? 10 meters??? just where can't most hams operate???
:
: actually i find that the dx tends to congregate in area's the US general class licensees can't go, which I feel is a shame.
: The dx windows seem to allow more than enuf advanced and extra class US licensees access to those stations
: operating "DX"

Look at the band plans between Regions 1, 2 and 3 and you'll see why
they don't operate where General class licensees operate, because they
can't operate there. The amateur bands in the various regions are different
from each other and don't entirely overlap. What is a voice section in
one ham band in Region 2 might be a commercial broadcast band in another
region. A voice band in Region 1 might be a CW only band in Region 2.
Usually the Extra class portions overlap the same modes/bands as the
other regions do. The DX stations aren't trying to avoid people, they
just can't operate in the same band plans as we do.

Hi,

I let my RSGB membership lapse some time ago; the reason was that I felt that although the RSGB did a reasonable job at negotiating license changes, that was about all I got out of it. I'm a techie more than a contester, live in a small suburban shoebox and thus don't have room for massive aerials to work the DX; I just found that the focus of the RSGB was different to what I needed. Yes, I did try to get involved but found it was too much like local politics!<g> Also, when you're running your own business and also involved with local community groups, time's important and there's no way that I could have spent time tooting off to London for Council meetings, etc. even if I'd got that far.

So, way forward. The RSGB meets the needs of some members, but not all. In this day of empowered groups, won't the RA, IARU, etc. speak to other properly constituted societies who, say, have a membership of more than10 or 20% of the RSGB membership? OK, life would get interesting and the views of different groups would have to be taken on board, but that approach would allow a wider view of amateur radio affairs to be put to the powers that be than currently happens.

I'm now going to put on my flameproof underwear and retire to the bunke....<g>

There's only one decision to make;
get busy living or get busy dying.

>They (pardon the cliche) couldn't care less. Of the hams who are active, on the
>air, mult-band and multi-mode, I would say that the overwhelming vast majority
>are ARRL members.

What basis do you have for that claim?

I took a quick informal survey of some of the regulars on my repeater. Out of 15 active amateurs queried, only one other than myself was an ARRL member, though several are TAPR or AMSAT members. All but one of these amateurs are multi-band and multi-mode capable. Now that isn't a scientific sample to be sure, but it does indicate that there is some doubt about your claim.

Another indicator is comparing the number of ARRL affiliated clubs to the total number of radio clubs. To become an ARRL affiliated club, 50% of the membership must be ARRL members. Only a minority of radio clubs are ARRL affiliated. Since there are benefits to being ARRL affiliated, it is logical to assume that most eligible clubs would do so if they met the qualification. (And club members aren't generally inactive or deceased.)

Try this yourself. Ask all your stateside contacts if they are ARRL members and keep a tally. Unless you operate CW exclusively, I think you won't find a vast majority who are ARRL members. (CW operators are disproportionately ARRL members as evidenced by the ARRL's own surveys which show that ARRL members are 16% more likely to operate CW (at least occasionally) than the general amateur population.) I suspect (but have no evidence) that more HF qualified amateurs are ARRL members than those who operate strictly VHF+ (that's because of the contests sponsored by the ARRL, which are mainly oriented to HF Dxers), but I doubt you'll find a majority of either HF or VHF+ amateurs are ARRL members. I haven't kept a formal tally of my recent HF contacts, but I have noted that many don't seem aware of topics recently raised in QST.

Certainly the number of outstanding licenses is inflated by deceased amateurs whose calls haven't yet been purged, and by amateurs who have become inactive. I don't think that

approaches 50%, however, and the ARRL membership roles are
also inflated by deceased and inactive members whose subscriptions
have not yet expired. I know that the ARRL is concerned that
the majority of newly licensed amateurs are not becoming
ARRL members, and has been taking aggressive steps to recruit
them. Over the last 5 years, we have witnessed an almost 33%
growth in the number of licensed amateurs, but ARRL membership
hasn't shown a proportionate growth.

It is unlikely that those who have taken the trouble
to become licensed are largely inactive. If my experience
is any guide, the newly licensed seem to be the most
aggressively active of all amateurs other than the rabid
contesters. (The newly licensed also have the highest
dropout rate, of course, as they become disillusioned by
what they hear on the bands, but I don't think that dropout
rate approaches 50% either. I base that on the growing
proportion of 2x3 calls I see on the air.)

>
>Yup. Same logic.

No, not the same logic. All amateurs radiate RF, and are held responsible for doing so properly, IE within technical standards for purity of emissions, RF exposure, etc. An amateur can't pass off the blame to Kenwood when he radiates harmonics, or splatter, etc. He's responsible, and the technical tests are there to make sure he knows enough to be responsible. It doesn't matter whether he builds or buys, or whether he talks or beeps, he's responsible for the proper operation of the station.

The real reason for the written exams is to remove the excuse "I didn't know" from the vocabulary of amateurs operating in violation of the regulations.

>ARRL members use it), SSB (also 79%), and CW (54%) - but ahead of packet
>(40%) and far ahead of any other mode."

It is interesting to note that the 48% internet able figure quoted above
is significantly below the 70% figure recently reported for the general
amateur population. It is also interesting to note that the 54% CW usage
figure quoted above is 16% greater than the ARRL itself reported for
their survey of the general amateur population (professionally conducted
in 1991). These two things may indicate something about the technological
level of ARRL members. Also, the 40% packet figure is significantly up
from the 22% quoted in the 5 year old survey. Looks like a trend to me.

>That "some percent" is pretty high Bill. There are more ARRL members
>operating CW than there are on the Internet and CW's popularity ranks
>third only after SSB and FM.

It is worth noting that the percentages don't add up to 100%. That
means that amateurs use more than one mode, and the survey doesn't
break down what percentage of their operating time is spent on a
particular mode. For example, in response to the survey, I had to
answer yes to the Morse question because I use Morse to ID my repeater.
Now that's my *only* current use of Morse and certainly doesn't constitute
54% of my amateur activity (which is mostly conducted on the modern
digital modes or via FM voice).

>Maybe you didn't see the editorial, but do you not listen to the CW bands?
>Don't you go out on field day? Haven't you ever listed on the low ends of
>the bands on CW contest weekends? How about the 30 meter band? Have you
>never listened there? It would appear you haven't.

I operate frequently on the 30m band. Digital usage far exceeds CW
usage there. That may be hard to tell if you aren't equipped for

modern digital operation due to the large number of stations using
CSMA at the upper end of the band.

>CW is alive, well, and thriving. In fact, the demand for QRP CW
>transceivers alone has almost single handedly revived the kit industry.
>Just open your eyes and ears and it'll become apparent.

Do you have any sales figures for QRP CW transceiver kits? How do
they compare to the number of TNC1 and TNC2 kits TAPR sold, or the
number of 56 kb modem kits GRAPES sold? How do they compare with
the number of FM kits Ramsey (ugh) has sold? Or the number of VHF
FM kits Hamtronics has sold? From what little information I have,
total sales of any QRP CW kit is unlikely to have exceeded 1,000
units. TAPR did over 10 times as many. And how many of those QRP
transceivers are actually used for CW? My R2 and T2 are used for
QPSK experiments and have never beeped the first Morse character.

>This has nothing to do with the so-called debate about Morse testing, but
>it does have to do with correcting your implication that there is little
>CW activity when in fact there is. You may believe that's the case, or
>perhaps you might even WISH it were, but quite simply, it isn't.

Morse is still in common use, not as much as you would appear to claim,
but still in common use. Of course so are other modes, but Morse is the
only one with a separate test. One might justify that if Morse were the
most commonly used mode, which it isn't, or if it were the most useful
mode, which it isn't, or if it were the most effective mode, which it
isn't. In fact it appears to be a stagnant or declining mode compared
to other modes showing positive growth in the general amateur population.

It would be interesting to see figures which added up to 100% for
various mode usages to see where Morse operation really stands with
respect to other modes. For example, in my case Morse usage makes up
less than 1% of my amateur activity, and 100% of that is automatically
generated by the repeater controller. If the rules permitted me to ID
the repeater with a short ASCII burst instead, my usage would be 0%.
(I could make it talk, but I hate talking repeater IDers. Morse is
easier to ignore.) In the now distant past, 100% of my operating was
via Morse (when I was a Novice), but that, like the repeater IDer, was
due to regulatory fiat and not choice.

Oh, what the hell, Gary. Let's just say, for the sake of accurate data
collection, your Morse code useage is 0%. That is, unless you want
to count all the time that other people talk on your repeater as *your*
amateur activity on FM.

So what's that got to do with anything ? Excuse me if I sound crabby,
I just woke up - with a keyboard in my face....

>Mike

Depends on what you want to do, Mike. Yes, in general, CB equipment
is cheaper than ham equipment is. CB is generally for 'local' communications,
and ham radio is generally for long distance communications. No license
for CB, license for ham bands. Ham frequencies are a bit more organized
than CB channels, for the most part. Ham radio is more oriented to people
who are interested in electronics for a hobby, CB is more for people who are
just interested in talking on the radio. A lot of people start with CB and then
eventually become ham radio operators.

>on the spectrum) is up?
>
>Can the Government/FCC ever TAKE the frequencies back? (Through no fault of the purchaser)

Good questions. No property right is transferred by the auction.
And winners of the auctions still have to be licensed and comply
with regulations just the same as if they hadn't "bought" the
frequency, except they aren't burdened with competitive filings.
In fact it is just a tax or surcharge for obtaining a license.
It shifts the burden off the FCC from determining "best use"
of spectrum and lets those with the most bucks decide.

After the "lease" is up, the new leasee will be motivated to prosecute
those who "trespass" on his spectrum. This will tend to shift the burden
of enforcement from the FCC's shoulders and onto the shoulders of the
leasee.

And *of course* the FCC can take frequencies back. The auctions convey
no permanent title to the spectrum. Just as the FCC took 220-222 MHz
from amateurs, it can take any other chunk of spectrum it wants at any
time that it wants. The government doesn't give up its power of eminent
domain over the spectrum (or anything else). Governments never voluntarily
surrender power. As long as the government has overwhelming force on its
side, it can do anything it damn well pleases.

The working definition of government is that it is the body
with the largest and best armed set of goons on the block.
When they are "our" goons, we call them cops, soldiers, IRS
agents, etc. When they are "their" goons, we call them hit men,
terrorists, protection racket enforcers, etc. But it's the same
thing, use of force or threat of force to impose one's will on
others and to seize their earnings for uses that they wouldn't
voluntarily choose.

Indeed, the 50 watt categorical exclusion has no scientific basis.
IMHO, the most hazardous installations are likely to be the ones
running less than 50 watts, IE HTs and on-glass antenna equipped
mobile stations. That's because the fields to which the operator
is exposed will be much more intense due to proximity. The decision
to exclude these popular setups from regulation was purely political.

But contrary to your idealistic opinion, that is how laws are made.

Heh, while I share your sentiments about such deliberate mischief,
it is worth saying that anyone who takes a mod posted to the internet
(or anywhere else) on blind faith is a fool. One should always examine
the circuit to assure oneself that the mod makes sense before performing
it. In this case, it clearly does not.

Note that the ARRL "owns" the IARU. It can represent itself to that body any way it pleases. The IARU was created by the ARRL and is run by the ARRL, pretentions to the contrary not withstanding. It is just a front organization, however, and has no authority or power, so it doesn't really matter how the ARRL presents itself to the IARU.

How the ARRL represents itself to the FCC, or the ITU, however, is another matter. Claiming to represent all of amateur radio to those bodies is indeed false. The ARRL speaks only for a fraction of its own membership. Most of the blame goes to the FCC for going along with the gag, however. The FCC should understand political dynamics better than that.

>
>There are very few at the ARRL who could not walk out tomorrow and make far
>more money, as many of them do. I would say there have been real sacrifices
>made so they could work with Amateur Radio.

Right, and except for the laboratory staff and W1AW operator, they really
don't get to work with amateur radio on the job either. In fact, people
in other professions often get to spend more time pursuing their amateur
interests than ARRL staff do. Once the spurious glamor of being a "mover
and shaker" in amateur radio wears off, there isn't much to recomend the
ARRL as a career choice. The low pay, long hours, and a really tyranical
boss make being an ARRL staffer a thankless job.

>(2.) The No-Code was not a money
>maker for anybody. They did not buy equipment, the did NOT join the ARRL or
>subscribe to any other ham mags. (Rare exceptions, of course, but VERY rare.)

The code test free Tech license certainly did bring money into the
equipment manufacturers' pockets. Not many Techs went to the trouble
to get licensed and then didn't get any equipment so that they could
use their license. What would be the point?

Of course manufacturers of HF equipment didn't get a boost, but
manufacturers of VHF+ equipment certainly did, and manufacturers
of packet equipment certainly did too.

But you're right that not very many joined the ARRL. That's plain when
you compare the percentage growth of the amateur population since 1991
to the percentage growth in ARRL membership for the same period. That
shouldn't be too big a surprise, however, when you consider that the
ARRL opposed the code test free Tech license we got. The QCWA, which
strongly supported the code test free Tech license, hasn't yet benefited
from it, but just wait 20 more years. :-)

Those of you who pick on the old guys just don't know who your
real friends are. The QCWA, TAPR, AMSAT, and a few individuals
(mostly greying) beat the ARRL at its own lobbying game to get
you the code test free Tech license. Many of these old guys
remember the disaster called Incentive (to pass faster code

tests) Licensing the ARRL rammed down our throats, and saw this
as a way to undo some of that damage and spike one right in the
ARRL's face. I for one enjoyed that very much, and I'm gratified
at the healthy change in amateur demographics which resulted.

I'd suggest ignorance is recomending using an unsuitable $500 radio
to do the job of a $100 data radio. It's cheaper to do it right than
it is to do it wrong, and you'll cause less harm to other users of
the LAN in the process.

I don't know what Carl will say, but to be a politically viable
force we need to grow to between 3 and 5 million amateurs over
the next decade. As Carl noted, we'll have to change the way we
operate to accomodate that sort of growth, but it is technically
feasible to do so (and would be a very interesting challenge).

Also, try VHF/UHF CW/SSB. Better yet, try VHF/UHF CW/SSB QRP !!

5 watts goes a long way on the bands 50 MHz and above. And antennas are
small.

We lost 220 MHz years ago due to inactivity on the band; let's get some more
activity going on the higher bands. At least we'll have a cause then.

Interesting reply Burt. You put a smile on my face.

If I were a typical ham my comments would be anything but interesting.
The would be sprinkled with HI HI and it is a beautiful day.

AA0NN said:
I agree ham radio is very chancey and unreliable. I've experienced that
many times when I've attempted several NTS messages...voice and packet.
Seems as if the ball is dropped in most cases.

I was amazed your message got to me and mine to you.

AA0NN said:
My opinion is that the "loser" bulletin was not a meaningful exchange.

But that is OPINION not fact. Thus why should you be a God. Who needs
your protection? The loser message did not put your license at risk. Do
you want to be "protected from messages? Are you an adult?

AA0NN said:
Communist dictator...I think that's a fairly extreme position, Burt. I
would think of it as a hobby/service (whatever!) where we police ourselves.

Yes it was extreme but the only difference is you do not have the power,
If you were in the position to dictate to a country why should I think
you would not "protect" a whole country by controlling the media?
The hobby does police itself but that term should apply to illegal
activities not matters of censorship of ideas.

AA0NN said:
Let's see...all the BBSs that have a hold list for dirty words are also
controlling, right? What's profane for you and me and the FCC are
probably all different. Who is the FCC to determine what is and is not
profane? Back to me...I determined what was] offensive to me, and I
controlled it.

My message was clearly not profane and clearly was legal under ANY F.C.C.
guideline. My message may have been offensive to some but where does it
say in F.C.C. rules that ideas that are offensive must be squelched? I find
most ham messages offensive for their lack of meaningful content but if
I were a SYSOP I would not delete them.

AA0NN said:
I lived in one of those locations....end of the Aleutian

chain on a 2x4 mile island.

Sounds like Adak

AA0NN said:
You're still on my LID list. I can't reject your messages, but I can hold them for review.

And that is different than before in what way?

Carl-

No, that's not clear enough. Your "hundreds of thousands" still seems pretty imprecise and largely based on speculation. Don't we really need to get an estimate from someone competent in the field (i.e., someone with marketing expertise) in order to know how big the group of new equipment buying hams needs to be in order to represent a viable economic force before we can conclude that there is "strength in numbers" (you argument must be based on economics; you surely can't be suggesting that "hundreds of thousands" of hams represents any political force).

No, same logic does not apply. We are talking about operating modes, not the assembly of equipment, or the operation of a station. Rather a significant difference. We agreed that in order to operate (a given mode) one should be required to demonstrate proficiency. It follows then, that one must demonstrate proficiency in the operation of station.

Or are you putting forth the same tired old argument that unless one builds one's own steam-driven radio gear, one isn't worthy of generating RF? By the way, did you build those vacuum tubes yourself?

> "Just give me a radio and let me yack. That's all I want."

Uh-huh, just give me a radio and let me key. That's all I want. What's the difference?

2092. ARLB056 Hurricane Edouard 1

SB QST @ ARL $ARLB056
ARLB056 Hurricane Edouard 1

ZCZC AG36
QST de W1AW
ARRL Bulletin 56 ARLB056
From ARRL Headquarters
Newington CT September 1, 1996
To all radio amateurs

SB QST ARL ARLB056
ARLB056 Hurricane Edouard 1

At 11 AM EDT, or 1500Z, the center of Hurricane Edouard was located near latitude 37.3 north, longitude 70.2 west or about 275 miles south of Nantucket Island, Massachusetts. A hurricane warning remains in effect from Watch Hill, Rhode Island to the Merrimack River in Massachusetts. The storm is moving toward the north near 16 mph. Hurricane conditions could reach Southeastern New England shortly after midnight.

ARRL officials in affected areas report impending activation of Skywarn, ARES and other nets. In Connecticut, nets will be activated on 147.09 mhz, 145.29 mhz and 145.49 mhz repeater systems this evening. In Eastern Massachusetts, nets will convene on 146.76 mhz and 146.64 mhz repeaters.

Hurricane Watch Net Manager Jerry Herman, N3BDW, reports that the net will be activated in conjunction with the activation of the National Hurricane Center Station W4EHW in Miami as the storm approaches landfall. The net will convene on 14.325 mhz.

Joe Schmidt, W4NKJ, coordinator, reports likely activation of W4EHW at the National Hurricane Center later today. The ops at W4EHW will accept the following MET data from amateurs in the storm track: measured wind speed as sustained for one minute, gust speed and barometric pressure. Send info with time and origin of report to w4ehw@fiu.edu, http://www.fiu.edu/orgs/w4ehw, via the Hurricane Watch Net or other nets.

Amateurs are advised to monitor storm nets but not to transmit on net frequencies unless directed to do so by net control stations.

>California to Florida in a 42' sailboat ... and many others.

If code is irrelevant as a requirement for a amateur license you make a
good
argument. My point is about the character it takes to surmount an
obstacle that
one may not find to be relevant to his interests. Many other
organizations have rites
of passage, initiations if you will. Isn't the long, hard road that must
be hoed
at college a form of initiation for your profession? Was every tough
class you took meaningful to your job performance? Were people weeded
out, back then in school, even prior to the game of obtaining
employment? You know, during TEST time. All I was trying to state is
that I feel amateur radio does need a weeding process. A test that not
only polls knowledge but one that also shows dedication. I feel that the
code part of the test
tests dedication to the hobby. With dedication comes responsibility. With
responsibility
comes adherence to the rules. My actual concern is the apparent increase
in misuse of
radio equipment. I think that after someone spends months learning code
to get a license that person would be less likely to throw the license
away, like the fellows did out in arizona.

Also I must apologize. I did not mean that there were only two types of
people in the world. We all are, at times called upon by challenge. Some
embrace the challenge and react to it, others cringe in front of it. Some
of us challenge ourselves, like you with the boat trip. The type of self
challenge is selected by us. So I agree that you can be a person that
accepts challenge but one who does agree to selecting the challenge of learning code.

I thank you for your response. I have found it very interesting.
N8TPM, Ron.

Jeff,

Check the subject ... this thread is about whether the ARRL truly
represents the views and needs of the majority of US hams, not
specifically with respect to the code debate, but overall ...

Besides, why hide it? Neither "the code debate" nor dissatisfaction
with the ARRL's missrepresentations will "go away" just because you
don't want to be involved. Ever heard of a "kill file"? If you want to
kill file me and the others who think these are important issues, feel
free ...

postage-paid return envelope, checking the box and indicating that they
were, in fact, still alive and cared enough to reply??????

As I said, it would allow the FCC to reclaim a LOT of SK callsigns,
which they could re-issue for a fee under the new vanity call program,
raising revenue that they might even apply to better enforcement
programs.

It would ALSO let the FCC get a clear unbiased view of the REAL opinions
of the US ham population, instead of the slanted, backward trash that
the ARRL feeds them.

Besides, I'm NOT a tech with no HF priveleges ... I passed a code test
at the FCC office (5wpm) and the General written to get my tech.

I've probably been licensed longer than you have (20+ years), so don't
give me your "You're a lowly tech, I'm an Extra" crap!

It would be more accurate to refer to us as the "Morsely-DISINTERESTED."

I passed the code test ... just don't want to use it and think it is
very bad policy to FORCE anyone to learn it if they don't have interest.

The "olde fartz" could be the
"progressive-forward-thinking-for-the-future-of-ham-radio challenged."
Come to think of it ... that describes the ARRL, too ...

The arguments like "if we drop the code, next we'll drop the theory" are
flawed because the FCC will not drop theory testing in the interests of
preventing interference to other services. The FCC has considered CW
irrelevant for years ... it's the ARRL and other counter-progress groups
who orchestrated letter-writing campaigns against dropping the code.

>
Gary,

Perhaps it's not as obvious to everyone as it is to me ... and I should
clarify:

There's a BIG difference between the "old guys" and "ye olde fartz" ...

I know a LOT of old guys who are friendly, progressive, welcome
newcommers to the ranks with enthusiasm, and (still) operate CW.
They will try to share their interest in and enjoyment of CW with the
newcomers, but not force it down their throats. They do not turn their
backs on the newcomers and make them feel unwelcome in other ham
activities when they say, "Thanks, but CW is not my cup of tea."

Then there are the olde fartz ... they're the ones who make the
unidentified commments when a newcomer shows up on the repeater
("'nother damned no-coder") ... they also tend to voice the same
opinions in thier ragchews with their cronies on (insert freq here).
They're the ones who for all purposes and intents wear "Real Hams Pound
Brass" T-shirts ... it's there in their comments, their actions, and
everything they project, both consciously and unconsciously, to new
hams. If you don't do CW, you don't "belong on 'their' bands."
And they think their views should be the law of the land. (after all,
that's the 'natural' way ... the way God intended it, right?)

BTW ... I know a lot of the TAPR and AMSAT folks ... they're certainly
not olde fartz ... if you, or anyone else, thought I ever implied they
were, you were mistaken.

Ron,

That's true in some cases ... but in many "DX" countries, there are no band plans. XE comes to mind ... when I was XE2/WA6VSE, I was free to operate whatever mode I chose anywhere in the band ... as long as I stayed in-band. There was lots of voice activity below the US voice band throughout Latin America, mostly because by staying away from the gringos, they avoided the nasty "beaner" or "greaseball" comments (another variation on the "damned no-coders" a-la-olde farte) and found less crowded areas. Sad, but true.

There are, in fact, quite a number of active, technically competent/progressive amateurs who work at the FCC in positions of authority. This may come as a shock to you but these guys really do know what's going on in amateur radio today- without having to rely soley on the ARRL for guidance.

Sometimes your posts smack of real arrogance. Your constant suggestion that the old timers are largely behind the technological curve suggests that you don't get out much. You really do need to get to know some of the other members of this great fraternity- you might be surprised at the number of the old timers who are at least as smart as you think you are.

>from the 22% quoted in the 5 year old survey. Looks like a trend to me.
>

It's not just "interesting" it's SIGNIFICANT ... even if the ARRL were
"representative" of its "members" they'd be representing a "membership"
that was, on a whole, overwhelmingly backward from a technical
standpoint. (48% net access for ARRL members vs. 70% overall ham pop.)

And that's counting me and the many other "subscriber-to-QST-Members"
who probably represent a huge majority of the 48% with internet access.
And they certainly don't "represent" the views of the technically
progressive segment of their "membership" ... so what they DO represent
is the view of the technically-backward minority of the US ham
population. How in the hell does this qualify them to pass themselves
off to the FCC, IARU, and ITU as the "voice of US amateurs" ???

>It is worth noting that the percentages don't add up to 100%. That

>due to regulatory fiat and not choice.
>

It's been said before, but it's something that some folks here seem to
have difficulty understanding:

1)Nobody (that I've seen/heard) has suggested banning the USE of CW ...
just eliminating the testing.
2)If the mode is so great and so many people WANT to use it they will,
and it will survive (if and as long as it's truly worthy of survival)
without a government mandate.
3)IF .NOT. (2) THEN LET_IT_DIE

Gary ...
I was being a bit politically dishonest when I said "hundreds of
thousands" ... after all, I don't want to cause too many strokes
amongst those who feel the bands are already too crowded and we should
be doing everything we can to keep people out.

But, since you've let the cat out of the bag, I have to admint that I
agree with you 100%. If we can't show that sort of users/MHz figures,
we'll find ourselves on the wrong side of a spectrum auction at some
point in the not horribly distant future.

I don't want to see that happen ... and since I've slipped into being
TOTALLY politically honest, it's going to take a lot more change than
just eliminating the CW test ... we're going to have to implement better
band planning/frequency-coordination, do a much better job of driving
new, spectrally-efficient technology into our ranks, and a lot of other
things to make it fly.

How? How much "theory" is really involved in the "assembly" of a station
these days? Probably the most tasking thought that the modern-day ham has
to go through is deciding where to ground his/her station.

The "appliance operator"-azation of amateur radio is well known. The vast
minority of hams need to understand much of the theory presented above
the entry-level examinations.

> It follows then, that one must
> demonstrate proficiency in the operation of station.

How does a theory examination "demonstrate proficiency" at anything,
other than taking an examination? It doesn't ensure that people actually
know what they're doing.

>Or are you putting forth the same tired old argument that unless one builds
>one's own steam-driven radio gear, one isn't worthy of generating RF?

No, merely that your logic is equally applicable to elimination of all
testing requirements within the amateur service.

>By the way, did you build those vacuum tubes yourself?

I have my own glass-blowing equipment right here.

>Uh-huh, just give me a radio and let me key. That's all I want. What's the
>difference?

This is the amateur radio service. Not the personal radio service nor
the cellular phone service nor the general mobile radio service. There
is more to the amateur service than yacking -- something most people
seem to hae forgotten.

Alan,

It's not how many hams are spending how many bucks per year on ham gear
.. that'd rank rather low on the FCC's list of ranking criteria.

Public interest value ~= (Users_per_MHz)*(Value_of_user_activity)

Our value, historically, has been in public service activities and in
maintaining a pool of technically-skilled communicators.

You have to get the idea of what "the public interest" constitutes ...
it's not economics ... it's more like "what's the intrinsic VALUE (where
value is not entirely, or even necessarily, measured in dollars) of this
use of the spectrum."

Therefore, even if the Value_of_user_activity stays constant in the equation above, if the Users_per_MHz increases, the public interest value increases, too.

We need to increase BOTH terms to the right of the ~= in the above equation to reach a point where the public interest value is sufficient to ensure our long-term survival ...

Think about it ... in today's world of cars, trucks, airplanes, and space shuttles, there's not a lot of demand for blacksmiths, right ???

The ham community is rapidly becoming the "blacksmiths" of the electronic age ... and the ARRL and the "CW forever" group are telling the FCC "This is what we want ... this is where we demand to remain."

That's pure techno-political suicide.

Tim,

Apparently you don't know Jim. Let me introduce him to you. He claims to not care if the code test requirement is abandoned, yet he hangs around here taking occasional pot-shots at those of us who passionately desire its abolishment because we firmly believe it's necessary for the survival of ham radio and the preservation of our frequency allocations.

Jim also seems to think that anyone who hasn't passed the CW test is of a "lesser class" with respect to both hamdom and humanity in general, than he is, and therefore is ignorant and unworthy of expressing his views. (This trait seems almost universal amongst those who feel that maintaining the CW test is imperative.)

I make no claim to knowing Drew, and will therefore disclaim any general endorsement of him, but his "What do you hear on HF?" examples are, to a VERY large degree, disgustingly accurate.

Michael,

At last something we can agree upon ...

There IS more to the amateur radio service than "yacking" ... and more to it than "pounding brass" ... much more.

However, MOST of what ham radio "IS" that is of "public interest value" (and maintains our allocations) has NOTHING to do with CW.

Funny, but you don't believe in a code test, and you think eliminating
the code test should be the "law of the land".

Seems hypocritical of you to be condemning people for their beliefs when
you yourself are guilty of the same action.

I really have little interest in building my own radio gear, and I think
its very bad policy to FORCE anyone to learn it if they don't have
interest.

Yup, works for me.

>The arguments like "if we drop the code, next we'll drop the theory" are
>flawed because the FCC will not drop theory testing in the interests of
>preventing interference to other services.

I keep hearing this, but evidence shows otherwise. For one thing, one
doesn't have to take a "theory test" to get a commercial license for,
say, the 150mhz public safety band. I didn't have to take a theory
examination for my Ship/Aircraft Radio Station License. Why would
"interference" originating from the amateur service, where most
people operate with commercial radios built within specified tolerances,
be any different than one of those services where I can operate a
radio yet not have any idea if I'm causing "interference" within another
service.

>The FCC has considered CW
>irrelevant for years ... it's the ARRL and other counter-progress groups
>who orchestrated letter-writing campaigns against dropping the code.

Perhaps you can detail for me the evidence which suggests that the FCC
cares one way or the other about the CW requirement, and give me a list
of all those "counter progress" groups.

How will sticking a bunch of people on HF save our VHF frequencies?
Seems you'd want them on VHF.

Oops, forgot. You already have a VHF code-free test, and that one
didn't work to "save our bands", huh?

Perhaps you'll detail all the HF frequency threats for us, so we
can take up a letter-writing campaign.

>of a "lesser class" with respect to both hamdom and humanity in
>general, than he is, and therefore is ignorant and unworthy of
>expressing his views. (This trait seems almost universal amongst those
>who feel that maintaining the CW test is imperative.)

Funny Carl, but the personal insults you've directed at myself and
others seems to suggest that you're pretty much intolerant of other
people's views too.

Those who live in glass houses shouldn't throw rocks.

>I make no claim to knowing Drew, and will therefore disclaim any general
>endorsement of him, but his "What do you hear on HF?" examples are, to a
>VERY large degree, disgustingly accurate.

Drew lives in Florida. What would you expect listening to local HF talk
when you live in the state with the highest per-capita of the elderly?

But then again, Spew doesn't own a radio. In fact, Spew really isn't
a real person -- he's merely a cron task that randomly dumps garbage
here to troll for postings. I'm sure you've noticed the extensive
number of posts from him.

>It is interesting to note that the 48% internet able figure quoted above
>is significantly below the 70% figure recently reported for the general
>amateur population.

Only if the same definition of "internet-able" was used in both instances,
and if the timeframe under which the survey was conducted was the same.

In the first case, we don't know the definition of "internet-able" for
both studies -- for instance, is "packet" considered "internet-able",
since one can receive e-mail through a Inet<>Packet gateway?

In the second case, the tremendous growth of the Internet means that
more and more people are "getting connected" on a daily basis. This
large growth could significantly skew the results of one survey over
the other, depending on the timeframe under which each was conducted.

How can someone have a "hard time" with a test where the answers are
all known in advance?

>First, amateur gear is NOT "type accepted" by the FCC as is commercial
>mobile radio gear.

It still performs within published tolerances. And, wasn't there a
story a few months ago that indicated that companies that sell
modifiable ham gear had to have it type accepted for the other services
it could be used in?

>Second, in the commercial bands, users do not have access to the
>controls that determine transmitter frequency, power, etc.
>limited channel selection from a group of frequencies that the user is
>licensed to use ... most land mobie users are authorized for one channel
>pair ... or for a trunked system).

Most VHF+ users are limited to their power output -- "low" and "high",
determined by the button on the front of their radios. According to another
thread here a month ago, they are also limited to a predetermined number
of channels, usually in 5khz steps on their VFO.

>Third, land mobile users do not adjust and maintain their own gear ...

Neither do most amateurs. They box it up and ship it UPS back to the
manufacturer's service center.

Maybe we should have a "fill out the UPS form" practical examination
in place of the CW test?

>That's the point ... the FCC couldn't care less about maintaining the CW
>requirement

You stated that the FCC considered CW "irrelevant". That's a big
difference from having no stance whatsoever.

>Fact.

Opinion, actually.

I recently bought a "Tele-Connect 850" at a hamfest for $10. Its quite old, but it looked like it was worth playig with...so I bought it. Has anyone heard of this Phone Patch? If you have, could you tell me what you think of it? Is it worth trying to fix?

I have also heard that the process that is used to decode DTMF's is an important factor as to how reliable it will be. I was wondering if anyone knows what process is being used here. Is it reliable one? When I say reliable, I mean I don't want to see it turning on half the time when someone is talking, and I don't want to push the DTMF 5 times to get it to activate.

I'm considering to get a ham licence, and since this here in No-way means that I have to learn morse, I was wondering if there is any morse training programs for DOS/Windows 3.1 available, preferably PD/shareware.
I also wonder if there is possible to get some kind of automatic morse decoding programs, so I could connect the receiver (and maybe also a transmitter) to the computer (ie. via the soundcard or a simple home-made interface) so I could receive (and maybe also xmit) morse as text on the screen.

Subject: Re: HELP: IS PC SWITCHING POWER SUPPLY OK???
Organization: Just my little old self

No problem with switchers per se, but pirateing a computer supply is
not without its problems.

All switchers require a minimum load. In many computer supplies its
the fan. Some assume some minimum load on the mother board. They go
out of regulation or stop oscillating and smoke with less than the
minimum current draw.

My ICOM IC740 has the optional built-in 13.8 volt supply and it works
fine but it was designed for communications.

There is a big difference between 12 volts and 13.8 volts. In the
case of my Radio Shack HTX-202 2 meter handy-talky it's 6 Watts at
13.8 and 5 W at 12.0. That's a 20% drop in power. Most mobile
equipment assumes a vehicle with a running alternator which is where
the 13.8 value comes from.

The TRW radio club (here in the LA area) was accepting donations for Newsline at the hamfest (held monthly, last Saturday of each month).

Gave them $5.

This could be a reasonable idea for other ham clubs who stage hamfests, to have a box for Newsline donations. Assuming no legal issues.

CB'ers and hams both use radio to communicate with others, but the differences are quite large. CB is limited to very low transmitter power and a small band of frequencies, so normally the distance one can talk is not great - typically 10-20 miles or so. Sometimes "skip" allows communication out to a few thousand miles, but the interference is often severe. CB was not intended to be a hobby, but a lot of people use it that way.

Ham radio, in contrast, IS a hobby. Hams are required to have a license, but in return are allowed to use more frequencies, more power and more types of modulation. Worldwide communication is possible nearly any time of the day or night. There's a lot more to it, so if you're interested, point your browser to http://www.arrl.org/ and check it out. I've been a ham for 39 years and still enjoy it every day.

> Cliff, W7VVA

I think this assertion ignores the facts. The fact is that the FCC cited a substantial scientific basis for its ruling. That that basis is questionable merely makes it like much of the rest of science. The FCC itself noted that scientific opinions differ on the effects of exposure to EM fields. We may disagree with the science; we may try to discredit the science; but it is wrong to claim that the FCC ignored it.

You must also allow that other facts -- not science, but facts nonetheless -- may have entered this decision. Laws must be practical and enforceable. This one will not be easily enforced, but the 50-Watt exclusion helps. Such "small quantity" exclusions have been used before. For example, in the regulations on leaking underground storage tanks, the EPA from day one excluded buried home-heating oil tanks smaller than 500 gallons and most farm storage tanks. It's not that they weren't part of the problem. It's that dealing with the 1,000,000-plus commercial and industrial installations was enough of a problem. In the RF exposure case, surely some of the less-than 50-Watt installations may be problems, and many of the more-than 50-Watt installations will not be. But 50 Watts strikes me as a reasonable dividing line if you want to establish a criterion for exclusion.

Now what about the meaning of this to hams? Is the ruling so burdensome? I don't think we know as yet. But I've made a few field strength readings before. And I've prepared a few dozen environmental impact statements. I don't think this is going to be a big deal.

Hi y'all
To my knowledge there is no requirement that a conversion between two parties has to be of interest to a third party. If two people want to discuss the weather, medical problems, winsock programming or whatever, what is wrong with that as long as both parties consider the subject of interest? I was unaware that the QSO had to be of interest to anyone who might be copying the mail. If this is the case would someone kindly inform me where I can find a listing of topics that are of interest to ALL even though they are not actively involved in the conversation?
I am 42, grey-haired, going bald and have been a ham for over twenty years, does this make me an old fart?

Right, because type accepted equipment for that band is channelized. Hardware
modification must be done by licensed technicians.

2140. Need help drivingving transverter from TS690

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-02 00:00:00 UTC
From: dit@dylan.isltd.insignia.com
Message-ID: <50es39INN2rm@dylan.isltd.insignia.com>
Source record: 217659

I want to drive a 2m transverter from my Kenwood TS-690.

Problem 1. The transverter only needs a few mWatts, but the
transceiver won't go lower than 10W.

Solution 1. Use an attenuator. Apart from being wasteful
(heating up my room uneccesarily) I guess you need some
switching to keep it out of the circuit on receive.

Solution 2. Use the ALC input on the accessory connector.
This is suuposed to be used by a linear to control the
drive level, and (apparently) can turn the output down
to a few mW as require.

New problem. How do I use the ALC input. I saw this months
ago somewhere, but can no longer find it.

Please e-mail any answers, suggestions or follow ups directly
to me (as well as the group, if relevant) as my news feed is
expired more frequently than I can read this list :-(

Thanks

You can try to convince us that the public service aspects of amateur radio will keep the service alive but most of us already know better.

If we,as a group, don't spend enough on new equipment and related materials to keep the ham manufacturers alive and well, the amateur service will die off quickly. That's a big part of the problem we're seeing right now. A growing number of amateur manufacturers are in financial trouble; more and more amateur dealers are gone or on the way out of business- all symptoms of the current poor health of amateur radio.

Gary, as you very well know, the problem isn't just ignorance.
It is not helpful to criticize someone for not knowing something.

The man bought the wrong radio, probably after spending a number of
hours agonizing over the expense, and asking around and getting opinions
from his buddies. Now he feels honor-bound to defend his choice.

What's sad here is that neither he nor his buddies knew the correct
answer - but there is no shame to him in not knowing. What's wrong
is that there are still people who don't know that the so-called
'9600 baud ready' radios generally aren't.

The shame is on the manufacturers who are duping people into buying
equipment which is unsuitable (or actively harmful) to the mode.

I would challenge TAPR, the ARRL, and any of the large packet clubs
to make it a point of honor to publish articles explaining WHY those
radios aren't suitable, and perhaps even to provide test data of
each of the various offerings.

I have not read any equipment reviews of any of the '9600 ready' radios
in QST or elsewhere. Have any of those reviews mentioned T/R delays
or PLL sweeping? Do the test labs even check those items?

Dana,

Don't take Chris too seriously he doesn't take to education too well.

Trying to educate Chris is kind of like trying to teach a pig to sing
it can't be done and it just annoys the pig. You and Gary and others
have experience and knowledge to offer don't waste your time on those
who will not hear.

I did find it interesting that a computer tech (from Chris's sig line)
does not understand collisions and service times better than he seems
to. I learned these lessons on a MicroVax I when I tried to lengthen
the disk drive data cable. The strobe reflections would take the entire
machine down.

We tend to use old Motorola rock bound radios for our 9600 baud stuff
as they are very stable and you can drop a truck on them. The test
points at the discriminator and varactor just make it even easier.
They use a lot more power than the TEKKs but I like the stability.

Now I must retire and put on my flame suit for the "Liar, liar, pants
on fire" tirade that is sure to follow this post.

Try my new Morse Code program, International Morse Code Processor
(IMCPW311.ZIP), at

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw311.zip

Below are its major features:

Morse code tutor for Windows 3.1 & Windows 95. Excellent for learning
and maintaining one's Morse code skills. Provides code speed of 3-50 wpm
and character speed of 10-50 wpm for Farnsworth code. Includes
comprehensive help facility, main menu and popup menu, and eleven code
practice lessons. Fully customizable from the Options menu. Sound card
not required. Requires 692K of free hard disk.

Bill,

What's wrong with this??? How about an interview via Amatuer Radio?

I don't mean to be sarcastic but I just find this quite ironic
considering the current discussion of the internet taking over where
Amatuer Radio once proliferated as the main means of distant
communications.

Could be a discussion topic for you to carry to your program.

Good Luck with the venture and if you need any local support give me a
buzz.

>Roland F6ANF

Roland,

I spoke with at least two ex Icom employees about the IC740. You can
make it transmit on the WARC bands, but there is no general Coverage
conversion without extensive modification and then it would be cheaper
to get a later model (IC745, 751, 751A) with the general VFO.

My IC740 now works on the WARC bands, but I have a Yaesu for general
coverage. You do have 10Mhz for WWV time coverage and CHU Canada
is heard on 7333 Khz. Don't know about France.

73, Dave K4JRB

>in QST or elsewhere. Have any of those reviews mentioned T/R delays
>or PLL sweeping? Do the test labs even check those items?
> - Brian

QST has started reporting BER measurements on radios claiming
"9600 baud ready". They first did that in an article explaining
their test procedures. Most recently they published results for
the shootout among dualbanders. The results have been almost
uniformly grim.

They don't appear to be specifically testing T/R delay or PLL
sweeping. That is a flaw in their testing paradigm. But since
BER is so uniformly grim, T/R switching time is a moot point.
PLL sweeping is a more universal flaw, affecting more than
packet performance. I would expect they would highlight such
a defect as a matter of course in their routine testing of
radios. But I don't recall seeing any mention of it in tests
of radios which I know do have the problem. Perhaps this is
something that should be drawn to the attention of the ARRL
lab.

Since you agreed with the first statement above, why do you object to "putting things right" by eliminating an unnecessary restriction???

>RF is a limited, natural resource. The government must establish
>guidelines for its effective use.
>

Agreed ... but CW testing has nothing to do with that ... if they were to pass a rule (as they have recently done in the commercial services) mandating that no equipment be used in the amateur radio service unless it meets a spectral efficiency requirement of n bits/Hz (what n should be is, of course open to some discussion), that would be appropriate.

In fact, in the commercial services, the FCC has started doing exactly that ... diliberately diverging from mandating any particlar technology (SSB/FM/CW/AM/PSK, etc) but rather specifying things in terms of "your emmissions must be contained with the boundaries outlined by the following "mask" and must deliver transmission efficiency of n bits/Hz.

I'd be happy to pay for the printing and postage costs involved in *my*
copy ... would you?

Hell, I'd finance a hundred copies at a dollar a piece.

It'd be worth it to have a shot at getting the FCC to realize that the
ARRL does NOT represent the majority of US hams ... the ARRL represents
the ARRL cronies, plain and simple.

Jari,

Please satisfy my curiosity ... what's the code requirement in Finland?

Do you consider your national organization to be truly representative of
the views and interests of a majority of Finnish hams?

Do you have a reactionary "You're not a REAL ham if you don't love CW"
faction in Finland?

I'm genuinely curious ... please elaborate.

In <50d8lj$12g@anomaly.ideamation.com>, kd1hz@anomaly.ideamation.com (Michael P. Deignan) writes:

>How will sticking a bunch of people on HF save our VHF frequencies?
>Seems you'd want them on VHF.
>

Point is, the removal of the code requirement will bring in larger numbers of otherwise qualified new hams ... both to the HF and VHF/UHF bands.

You have to be smart enough to realize that most people think of comunicating with people in distant places when they think of ham radio.

That means HF (OK, satellite, too ... but most beginners know about HF and don't yet realize that we've got satellites, too.)

People stay away because they don't like the requirement and the restrictions on their operating abilities that it imposes.
Nobody wants/likes to be classified as a "second class citizen."

>Oops, forgot. You already have a VHF code-free test, and that one
>didn't work to "save our bands", huh?
>

Not enough numbers yet ... and not enough VALUE in the USE ... we are simply not making good enough use of our bands in terms of users/MHZ .. or in quality of use ... and CW testing does not assure quality of use .. look at all the passed-the-CW-test lids on 14.3xx, for example.

>Perhaps you'll detail all the HF
frequency threats for us, so we >can take up a letter-writing campaign.
>

The threats will come in the future, after we've lost a few VHF/UHF bands and the no-code folks have given up in frustration because the CW-forever-establishment has been so short-sighted and narrowminded.

>>of a "lesser class" with respect to both hamdom and humanity in
>>general, than he is, and therefore is ignorant and unworthy of
>>expressing his views. (This trait seems almost universal amongst those
>>who feel that maintaining the CW test is imperative.)
>
>Funny Carl, but the personal insults you've directed at myself and
>others seems to suggest that you're pretty much intolerant of other
>people's views too.
>

I've responded IN KIND to the slurs and inuendo you and your compadres hurl at the "no-coders" and those with-code hams like myself who avocate the abandomnent of code testing.

>Those who live in glass houses shouldn't throw rocks.

If you can't stand the heat, stay out of the kitchen.

>>
>>I make no claim to knowing Drew, and will therefore disclaim any general
>>endorsement of him, but his "What do you hear on HF?" examples are, to a
>>VERY large degree, disgustingly accurate.
>
>Drew lives in Florida. What would you expect listening to local HF talk
>when you live in the state with the highest per-capita of the elderly?
>

Oh, come on! You can do better than that ... you don't seriously expect that anyone listening here will buy the argument that Drew only hears old fogies because he lives in Florida? HF doesn't cross state boundaries, huh??? Then it's like VHF, so we should have a code-free license there, too!!!!

BTW ... until this May, I was living in Florida ... I can assure you that the vast majority of old fogies I heard (as Drew said, "complaining incessantly about their health problems," etc.) were NOT locals.

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

Edward Addy KE0EG

eaddy@nacec.org

Executive Director, North American Center for Emergency Communications

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://promet12.cineca.it/htdx/index.html <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

Collecting information for the next annual ARRL Computer Networking Conference:

http://www.tapr.org/tapr/html/dccconf.html

For information about the ARRL info server, send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and David Newkirk's entry for information about the ARRL World-Wide Web Home Page.

Rich Bono NM1D

Rich Bono NM1D Internet: rbono@nectech.com
+1 508 635-6300 nm1d@aol.com

Author of the following MS-DOS ham programs:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

[Editor's Note: Fixes have recently been made to the FTP software at
this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more
countries. That is, of course, if I have the data. In order to do this
I need help. I need to get in touch with all people that have access
to databases from countries other than the US. The more up-to-date
these databases are, the better. If you have access to a database and
would be willing to donate a copy to the callsign server for everyone

to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

Relayer of Amateur Radio Newsline Bulletins

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can

download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

I am the US National Coordinator for RAIAR, Radio Amateurs
International Awards Registry, we have over 78,000 registered members
and just over 2,500 general members, plus lifers and charters also.

RAIAR only deals with the VHF/UHF spectrum for its awards, plus SWL on all bands.

I am ready to help any interested individual obtain his Novice or Tech ticket, as well as teach him the ins and outs of VHF Packet.

Our radio club holds classes for those inclined to advance to General and above.

2158. Re: Who Do You Hear on HF?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-02 00:00:00 UTC
From: carl@ais.net
Message-ID: <50fc0v$nrs@news.ais.net>
Source record: 217677

In <BPDyaLb.armond@delphi.com>, armond@delphi.com writes:
>
>Are you speaking of the olde fahrtz who went ashore at Normandy, Guadalcanal,
>Iwo Jima, or saw 20,000 of their friends die in B-17s over Germany, so you could
>live in freedom? Or are you speaking of the olde fahrtz who were drafted and
>spent their winters in Korea?

Armond,

Give it a rest ... you know damned well that the "olde fartz" title is
actually "CW olde fartz" and is only bestowed on people who can't bear
the thought of a day without brass-pounding.

(Again, I don't know him, but) I'll bet that Drew holds the proper
amount of respect for the deeds of the soldiers you refer to above.

Nobody is trying to demean the memory of our veterans ... that's a
pretty long stretch, even for you.

However, even though we respect our veterans for their heroic deeds in
defending their country, we still retain the right to disagree with
their views on the code test issue and criticize them for their
shortsightedness and narrowmindedness ON THIS ISSUE.

Don't get so carried away with carrying the banner for CW that you begin
to equate it with "Old Glory" for God's sake. The phrase is "Life,
Liberty, and the pursuit of happiness." I don't recall "unless you
don't operate CW" in there anywhere ...

Amateur Radio: Elmers List Subject Quick-Search Index

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

10-X INTERNATIONAL

* Cebik (Mailing List and WWW Page)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)/SKYWARN

* Ammar
* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Gray (Arkansas Section)
* Humphries (ex-Asst. EC)
* Knauer (ARES and SKYWARN, including National SKYWARN WWW Page)
* Kruml (Northeast King County, WA ARES EC, EComm Pacific Northwest
ARES Internet Mailing List)
* Lao (Philippines)
* MoellA (Hospital Disaster Support Communications System and WWW
Page)
* Morgan (ARES and SKYWARN)
* Neeson
* Paperman
* Schliesser (SKYWARN)
* Schwartz (NYC EC for Operations)
* Shelton, P
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Galazka
* Roth (Portland, OR Area Coordinator)
* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO (PACTOR)/RADIO TELETYPE (RTTY)

* Leavey (73 Magazine RTTY Loop Column and WWW Page)
* Neeson
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Sayer (also decoding CHU's ASCII time code)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bauer (W1AW Manager and Chief Operator, ARRL Bulletin Mailing List)
* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (EMAS Internetworking ASM)
* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)
* Hill (TN TS)
* Jahnke (VEC Manager)
* Kruml (Northeast King County, WA EC)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding (Educational Advisor)
* Sefranek (EMAS TA)
* Sohl (NJ Local Govt. Liason)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

AMIGA PERSONAL COMPUTER

* Leadmon (Amiga NOS FTP Archive)
* Salnick
* Whatton (Manager, Amiga Amateur Radio User Group and WWW Page)

ANTENNAS

* Anthony
* Brewer (wire HF)
* Brubaker (HF)
* Cebik
* Chahine
* Cieslak, C

* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Galazka
* Graham (wire HF for apartments)
* Gray
* Halbert (simple designs)
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Ihry
* Mouw
* Muenzler
* Myers (and transmission lines)
* Neeson
* Orcutt
* Reynolds (including HF)
* Rymell
* Salnick
* Salyzyn
* Sarrio
* Sefranek (and Transmission Lines)
* Shelton, J
* Shelton, P
* Silva
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* Thomson (wire HF)
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Anthony
* Bellville
* Brewer (40's-70's and WWW Page)
* Dean
* Drechsel (Collins Radio Virtual Museum WWW Page)
* Hill (Mailing List)
* Keys (including HF and CW)
* McEwen (Telegraph Key Collectors and Historians WWW Page)
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Orcutt
* Paperman (Manuals, Service Information, and Literature)
* Standerfer
* Turner (including Kenwood and Ten-Tec)

APPLE MACINTOSH COMPUTER

* Bellville
* Buydens
* Greatorex (including Amateur Radio Software FTP Archive)
* Seney (Macnet, including Anonymous FTP Archive and WWW Page, List of Amateur Radio Software WWW Page)
* Sohl

BATTERIES

* Ammar
* Browne
* Cieslak, C
* Hammill (Sealed Lead-Acid)
* Muenzler
* Myers
* Sefranek (including Solar Operation)
* Sohl

BRITISH AMATEUR TELEVISION CLUB (BATC)

* Pawson (WWW Page)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Meredith (F6FBB Packet BBS Support)
* Reeves
* Stillinger (IBBS)

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Standerfer

COLLEGE CLUBS

* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Killebrew (Trustee, University of Houston Amateur Radio Club)
* Luszcz (WWW Page)
* Madsen, et al (Iowa State Elmers)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* Cieslak, C
* DePolo

* Dodell (Mailing List)
* Gray
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Bono (AutoCW)
* Chahine
* Cieslak, C
* Elmers
* Elmore
* Galazka
* Hill (learning hints)
* Ihry
* Keys (including CWIST HF CW Net)

The Stanford Amateur Radio Club, W6YX, will be taking over the
Ham-Univ Mailing List for College and University Amateur Radio Clubs,
effective immediately.

The new address will be: ham-univ@w6yx.stanford.edu

The old address at the New Jersey Institute of Technology will
continue to work for the time-being as a forwarder to the new address.

To subscribe or unsubscribe, send mail to:

ham-univ-request@w6yx.stanford.edu

with the body saying "subscribe" or "unsubscribe".

Current subscribers have been automatically added to the new mailing
list.

Please let ham-univ-owner@w6yx.stanford.edu know if there are any
problems.

Stanford Amateur Radio Club (W6YX) WWW Page is at:

State Frequency Coordinator, Texas VHF-FM Society

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10 years. I don't know it all, but through my contacts I can find someone that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

ScoutRadio World-Wide Web Page:

http://scout.net/ScoutRadio/

ScoutRadio is a "good turn project" of Troop 319, Huntington Beach, California USA. Our goal is to promote amateur radio in Scouting, including past & present Scouts & Scouters, and being prepared with ham radio, helping community and country.

Current Projects:

* National Hurricane Center
* Jamboree-on-the-Air (JOTA) Matchmaking Hams with Troops
* Scout Discounts on Ham Equipment
* Donation of old Handheld Transceivers (HT's) to Troops

Officially ARRL approved as the JOTA info site.

Learn how to stay in touch on long backpack trips.

n1qzs@magrathea.com

http://www.magrathea.com/~ctg/

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (phil@temples.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is available at:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also available:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service Rules and Regulations) at:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/rib/part97.txt

Programs mentioned in QST are in:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:

ftp://ftp.barc.org/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST) on the Talk America Radio Network, now has a World-Wide Web home page:

http://www.barc.org/barc/ham-more/ham-more.html

Please direct any feedback, submissions, or administrivia regarding these resources to my E-mail address above.

Ken Gunton WB6QWF

kenny@erinet.com

Microwave Components World-Wide Web Page:

http://www.erinet.com/kenny/microwave.html

It changes from time to time, so stop back often! Don't see the component you want? Just call, fax your spec, or e-mail and attach your drawing or spec for a quick quote at BIG savings.

My company, Techlock Distributing, sells RF and microwave components of many different types. I own the company, and it's a small, one-man operation. While I don't sell Ham equipment per se, I have sold some dividers, etc. to hams for their use.

Doug Hall KF4KL

doughall@nando.net

JPS Communications, Inc.

For those interested, JPS Communications, makers of DSP noise filters
and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses
of DSP in amateur radio. If you know of some, I'd appreciate hearing
about them. There are a lot of people experimenting with new
modulation schemes, voice compression, noise reduction, DSP IF
techniques, and lots of other interesting applications. I'm planning
to add a page with links to this information, so keep an eye out for
it, and if you have something to share, please drop me a line.

Lance Halle KC7FVX

lanceh@crl.com

I will be glad to field questions in the following areas:

DFing
Local interference committee chairman

OO questions
Phoenix area Official Observer Coordinator

BSA Merit badge
Advisor of Ham Radio Explorer Post

Just let me know what all you need and I'll do what I can.

News of local enforcement actions and FCC Notices of Apparent
Liability (NAL) may be found on the WWW page of the Arizona Repeater
Association (of which I am a member):

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham- Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

Steve Harding KA6ETB

For amateur radio related information, send a message to:
ham-server@grafex.sbay.org
and put "HELP" and/or "GET /HAMRADIO/INDEX.TXT" in the body.

HAM-server is now on a 486 with nearly 70 MB of data. Besides DOS,
there are some UNIX, Mac, and OS/2 files.

Most files have been taken from the various ftp-servers world-wide.
However, there are many programs that have been donated by HAM-server
users.

Submissions welcome. Send to incoming@grafex.sbay.org.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington

CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and David Newkirk's entry for information about the ARRL World-Wide Web Home Page.

Mobile Antenna Systems and Installation (Primarily HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of

radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would
commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

>Carl - wa6vse
>carl@ais.net

I think it stems from what I call the "caretaker syndrome":- the
state of affairs when people have sway over property / rules of
conduct / club activities / intellectual properties/ power etc.
The role then is devoted to the keeping of that influence, rather than
using it to execute the job it was given for in the first place.

These "caretakers" are appointed, voted on, or mould a job for
themselves in any organisation.
There follows an unshakable faith that their decision is the correct
one because of insider information, and this is bolstered up by the
realisation that the system can be manipulated to give endorsement to
a preconceived result.
It happens in trade organisations, clubs, companies, political
parties, the quartermaster's stores, schools and councils.

There then follows the inevitable power struggle, where people who are
not happy with the status quo, take on the establishment, and either
succeed or fail. Various stratagems are employed by both sides,
usually dressed up in the guise of democracy, but what we have is as
old as the human race.
The fact that the "silent majority" want a good service, but have

neither the time nor the inclination to "get stuck in" just perpetuates the situation.

Depressing, but true.

The fact that packet and the internet can allow people to hack away at others without having face-to-face contact, has exposed *much* dis-satisfaction and angst which has hitherto stayed under the surface.

I have no axe to grind either way, other than to say I find the whole situation disappointing in the extreme.

I might also say that I view it as significant, that the organisation which supposedly looks after the PR of radio amateurs in our fair land, and beyond our borders, seems to be the last group of people to wake up to the *need*,(let alone the opportunities) for PR on the net, and on packet, (where their credibility is being attacked daily, and where they could do a really good job of publicly redressing the balance.

People who move slower than their customers end up on the rocks.

(Phew! did I write all that?)
Please folks, grow up.

It is the result of quasi-democratisation of an organisation, and is kept alive by the apathy or the

Jacques

Remember when sex was safe...
and rock climbing was dangerous?

2163. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-02 00:00:00 UTC

-----BEGIN PGP SIGNED MESSAGE-----

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

[Special Note: Greater Omaha Public Access Unix has been acquired by Novia Internetworking as of September 1, 1996. Novia will assume ownership of the gonix.com domain and intends to keep it active (aliased to novia.net) for the foreseeable future. This means that you may use either the new novia.net addresses, listed below, or the old gonix.com addresses for the Amateur Radio Elmers Resource Directory. I'd like to thank the administrators of Gonix for their outstanding support of this resource over the years, and look forward to a fruitful relationship with Novia Internetworking for some time to come.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line

documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM."

As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 5 or 6:

1. World-Wide Web (WWW): This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:
+ http://www.novia.net/~pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *
(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)
see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)
2. Usenet News: This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:
+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers
on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

3. Anonymous FTP: If your site is directly connected to the Internet,
you may retrieve the latest copy via File Transfer Protocol (FTP)
from the following sites:
+ ftp://ftp.novia.net/customers/pschleck/elmers/
+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/
4. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:
+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/
see also news:comp.infosystems.gopher
5. Mailing-List: Since the list is cross-posted to rec.radio.info,
the latest copy may be obtained from the mailing-list gateway for
that newsgroup (along with many other informational articles about
radio) when it is published each month. To subscribe, send E-mail
to:
listserv@ucsd.edu
and in the BODY (not the Subject) of the message, write:

subscribe radio-info
The server may not be able to determine your return address. In
that case write:

subscribe radio-info (your E-mail address)
You should get an acknowledgement very shortly.
6. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send
E-mail to:
ftpmail@ftp.novia.net
and in the BODY (not the Subject) of the message, write:

open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/diff

Alternatively, send E-mail to:
mail-server@rtfm.mit.edu
and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject

```
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

+ Hospital Disaster Support Communications System (HDSCS) Coordinator
+
+ HDSCS World-Wide Web Page:
+
+ http://members.aol.com/emcom4hosp/
+
+ For over 15 years, the 90-plus members of the ARES/RACES-affiliated
+ Hospital Disaster Support Communications System (HDSCS) of Orange
+ County, California have served over 35 hospitals in nearly 50
+ emergency situations. At the new HDSCS site on the Web, you can find
+ out how volunteer Amateur Radio operators can be an important backup
+ communications resource for hospitals, if the hams are well organized
+ and trained.
+
+ There you will find:
+ * How HDSCS organizes to support hospitals
+ * What "dedicated communicators" are and why they are important
+ * Frequently Asked Questions about hams helping hospitals
+ * The surprising answer to "How often do hospitals need hams,
+ anyway?"

+ * Response from hospitals served by HDSCS
+ * Info given to new HDSCS members
+ * Recruiting hams for hospital communications
+ * And lots more...

server files.

! Joe Nobody N0CALL
!
! nobody@nowhere.nodomain
!
! REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)
!
! No longer available from:

! * ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
! * http://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

! Well, it's finally happened. The long-defunct FAQ's have finally been
! removed from most archive sites. This important document, one which
! served as an excellent "Read Me First" for the readership of the
! amateur radio-related Usenet newsgroups, is now no longer publicly
! available.

! Efforts are still underway to bring it back, but so far, no volunteers
! have stepped forward that have been able to resume its regular posting
! and maintenance.

! As stated many times before, new editors are being actively sought to
! take over maintenance of the above resources and keep them from
! disappearing from the net permanently. As with any volunteer effort,
! new volunteers are often needed. We need new editors to post the above
! FAQ's. Preferably this should be someone who has enthusiasm for
! hobbyist radio, experience with Usenet, and the ability to work with
! the other editors. No single person can know all the various aspects
! of this diverse hobby, so the editorial review group is intended to
! make a greater combination of experience. A new maintainer is desired
! at this time to provide a fresh outlook as well as the opportunity to
! train new volunteers and avoid overreliance on a small group of
! people.

! The FAQ's were posted with the auto-faq software, which is written in
! Perl (see Paul Schleck's entry). So it would be a plus for volunteers
! to post the FAQ to have Perl installed on their system and be able to
! use "cron" or "at" so that postings can go unattended.

! With widespread net acceptance and use of the World-Wide Web, it might
! be desirable to rewrite the FAQ as a minimal "pointer" article with
! URL links. Such a minimal FAQ would reduce maintenance burdens, ward
! off criticism of the document for being "too big," and could be
! maintained as Hypertext Markup Language (HTML) at a WWW site, then
! "dumped" to an ASCII file for posting to news (to cover users who
! don't use WWW, as well as to actually feed a couple of automated FTP,
! Gopher, and WWW sites. Such an approach is used for the Elmers list;
! see the companion posting to this file, "Amateur Radio: Elmers List
! Info and Administrivia" for more information).

! Anyone who wants to make their contribution to the Net as a volunteer
! should contact the Elmers Directory maintainer at
! elmers-request@gonix.com.

! Avid SW/MW DX'er for the last 30+ years

! My main area of expertise is low-power (under 1 kW) Latin American
! Broadcasters, but I keep up-to-date on the current trends and events
! affecting broadcasters world-wide (i.e., I was recently asked about a
! station engineer who was working at ELBC in Monrovia, Liberia and was
! able to pass on information that the engineer was currently working in
! Gabon.) My other keen interest is Clandestine Broadcasters (not
! pirates).

! Though intentional signal jamming isn't as much of a problem as it was
! during the "cold war," I co-authored a report titled "THE WOODPECKER
! PROJECT" which was presented at an ITU convention. I still use those
! skills now and then to DF CB'ers running illegal power, and your odd
! "bad-ham."

+
+ Russian Phrases for Amateur Radio:
+
+ http://www.igc.org/traubman/russian.htm
+
+ This 20-page syllabus was compiled during the Cold War by W6HJK to
+ help amateurs better communicate with their Soviet colleagues. A
+ 90-minute audio cassette has been added to help with pronunciation.
+ You need not be an expert in Russian, only interested in "trying."
+
+ The booklet provides (1) English words and phrases for QSOs,
+ accompanied by (2) the Russian translation and (3) the English
+ transliteration, to assist you in pronouncing the Russian.
+
+ The syllabus follows the natural sequence of a QSO. There are
+ additional sections on the Russian alphabet, phonetics, CW characters,
+ numerals, and given women's and men's names. Suggestions are made for
+ addressing mail to the former Soviet Union.
+
+ The author undertook this project out of a personal interest in
+ improving the quality of his QSOs with Soviet hams and to enhance USA-
+ USSR relations. A nominal cost of $6 US ($8 US international) for the
+ booklet, and $6 US ($8 US international) for the audio cassette, are
+ payable to the Foundation for Global Community (formerly Beyond War),
+ the original original sponsor of this educational endeavor to build
+ global dialogue and cooperation.
+
+ Requests should be sent to:
+
+ RUSSIAN PHRASES FOR AMATEUR RADIO

+
+ [Editor's Note: It is my intention to keep the Elmers List as
+ comprehensive and useful as possible, representing a broad spectrum of
+ amateur radio activities. To that end, I have tried to make only very
+ minimal content judgements, if at all. Though this organization seems
+ to serve larger political and propaganda goals that I personally may
+ not agree with, I think the amateur-radio-related content, and the
+ useful product being offered, is redeeming enough to include here. As
+ always, criticisms regarding any Elmer's entry may be directed to the
+ Elmer him/herself.]

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

pschleck@novia.net

(finger pschleck@novia.net for PGP Public Key)

http://www.novia.net/~pschleck/

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/ Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

ftp://ftp.ucsd.edu/hamradio/packet/arrlcnc/1990/

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

HELP
QUIT

Dr. Len Traubman (DDS) W6HJK

ltraubman@igc.apc.org

http://www.igc.org/traubman/

Russian Phrases for Amateur Radio:

http://www.igc.org/traubman/russian.htm

This 20-page syllabus was compiled during the Cold War by W6HJK to help amateurs better communicate with their Soviet colleagues. A 90-minute audio cassette has been added to help with pronunciation. You need not be an expert in Russian, only interested in "trying."

The booklet provides (1) English words and phrases for QSOs, accompanied by (2) the Russian translation and (3) the English transliteration, to assist you in pronouncing the Russian.

The syllabus follows the natural sequence of a QSO. There are additional sections on the Russian alphabet, phonetics, CW characters, numerals, and given women's and men's names. Suggestions are made for addressing mail to the former Soviet Union.

The author undertook this project out of a personal interest in improving the quality of his QSOs with Soviet hams and to enhance USA-USSR relations. A nominal cost of $6 US ($8 US international) for the booklet, and $6 US ($8 US international) for the audio cassette, are payable to the Foundation for Global Community (formerly Beyond War), the original original sponsor of this educational endeavor to build global dialogue and cooperation.

Requests should be sent to:

FAX: +1 (415) 573-1217

[Editor's Note: It is my intention to keep the Elmers List as comprehensive and useful as possible, representing a broad spectrum of amateur radio activities. To that end, I have tried to make only very minimal content judgements, if at all. Though this organization seems to serve larger political and propaganda goals that I personally may not agree with, I think the amateur-radio-related content, and the useful product being offered, is redeeming enough to include here. As always, criticisms regarding any Elmer's entry may be directed to the Elmer him/herself.]

"Why don't you just make 10 louder?"
(Spinal Tap)
- --

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive
access to a variety of information related to the amateur radio
satellite program. Use your Web browser program (e.g., Mosaic) to
access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server.
In addition, various files and programs are available for anonymous
FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have

the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain
and/or shareware programs, data bfiles, frequency lists, etc., that
would make a useful edition to the QRZ! CDROM. Can help arrange volume
discounts for clubs and groups, and will donate copies of QRZ! to
qualifying non-profit organizations. Send E-mail or call +1 602
483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours
a day. Our connection is via a T1 line so you should get pretty decent
file transfer times.

We've got about 7,000 files online, including radio mods, software,
most everything imaginable. We are also accepting uploads of all ham
radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a
Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are
invited to contribute their materials to the QRZ! anonymous ftp server

above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:
* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Civil Air Patrol

Co-Host - Ham Radio and More

Ham Radio and More is available for free to any AM station that is willing to run it with national ads intact. If you want there to be a nationwide amateur radio talk show, call your local station and ask them to get the program. They don't have to be part of the Talk America network. They can call KFNN in Phoenix (+1 602 241-1510) or Talk America at +1 508 460-0588.

Effective 4/7/96: WWCR shortwave will air the show LIVE each Sunday at 6:00pm ET, (2200 UTC) on 7.435 MHz AND 12.160 MHz. Also, tape delayed at 5:00am ET (0900 UTC) Mondays on 3.315 MHz and Saturdays at noon ET (1600 UTC) on 12.160 MHz.

Call in and be part of the show. The toll free number is +1 800 293-5366 and outside the country at +1 602 230-2755. Fax at +1 602 241-1540.

See the entry for Cheyenne Greatorex for the Ham Radio and More World-Wide Web Page.

* NTS
* Packet and Digital Networking

I am an NTS operator running an unattended digital (Express, Winlink equivalent) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

David Newkirk WJ1Z

webmaster@arrl.org

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

Avid SW/MW DX'er for the last 30+ years

My main area of expertise is low-power (under 1 kW) Latin American Broadcasters, but I keep up-to-date on the current trends and events affecting broadcasters world-wide (i.e., I was recently asked about a station engineer who was working at ELBC in Monrovia, Liberia and was able to pass on information that the engineer was currently working in Gabon.) My other keen interest is Clandestine Broadcasters (not pirates).

Though intentional signal jamming isn't as much of a problem as it was during the "cold war," I co-authored a report titled "THE WOODPECKER PROJECT" which was presented at an ITU convention. I still use those skills now and then to DF CB'ers running illegal power, and your odd "bad-ham."

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not yet taken the time to catalog all this information (soon), but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals. Note that I am not in the business of selling the manuals themselves.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Other areas of expertise:

* ARES/RACES
* Novice/Tech Instruction
* RFI
* Volunteer Examiner Programs

Bruce Perens AB6YM

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

Bill Roth N7RYW

n7ryw@teleport.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a
lot of the "Elmering" in this area as well as steering people toward
others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

> How so???

first of all, what is awannabe ham, and who decides who or whom they are? And again, who pays for all these ballots??? certainly not me, definitely not the government. Why would a wannabe ham pay a dollar for something he may or may not be interested in???

> >> The point is that it's the FCC's obligation to decide the future of ham

I usually start by saying "Hi ____" but you didn't provide a name nor
call...

Your opinion is amusing. You're actually admitting you don't have the
ability to build your own radio, or even assemble one from a kit. But
three of the five subparagraphs in Section 97.1 (Basis and Purpose of
of the ARS) advise otherwise. Rather than continuing to post, why not
spend some time in the ARRL Handbook or some other text so as to satisfy
our basis and purpose?

Jeff KH2PZ

P.S. Public service will surely help us to keep our spectrum; just ask
the governments of Hawaii, Texas, Florida (the hurricane states), or the
mid-Western states which lie in the tornado belts and flood-prone regions
about the value of the ARS. And we stand to gain more MF/HF spectrum in the
near future.

>modification must be done by licensed technicians.

Wait a minute. Just a month ago people claimed that commericial amateur
gear is in fact "channelized", often in 5kc steps. Furthermore, they
have limited power output, usually a switch for "low" and "high" power.
Granted they are not "type accepted", but they do operate within
published tolerances. The vast majority of amateurs do not perform
maintenance on their radios, they ship them back to the manufacturer
for service.

So, in reality, there is no need for a theory examination.

You must be fun at a party with your mind-reading parlor tricks. I
must have missed the letters "CW" anywhere in Steve's statement.

>At least I can spell "incompetent" ... and I believe you meant "...
>no more clout ..." not "... now more clout ..."

Yes, but you can't spell ridiculous. The second letter is not 'e', it
is an 'i'.

My Gawd, all the rhetoric
The endless string of words
That brings out the no-coders
And the extras in herds
CW vs NO-CW is the endless cry!

Like a broken record
Or so it would seem
Like a hellish nightmare
Or a bad mealï¿½s dream
CW vs NO-CW
Lord spare me this endless cry!

Its a challenge -say some
Its ancient -proclaim others
And so the thread hums
Between us Ham Brothers
CW vs NO-CW is the tireless cry!

Words words words
Over and Over
Its enough to drive
A drunken man sober
CW vs NO-CW is the ad nauseum cry!

Rationalize, prove
and otherwise convince
All these dumb arguments
would make a crooked judge wince
CW vs NO-CW-Oh not again!

It turns some- just downright mean
Like a Junk-Yard Dog
They holler and scream
Lid, Swine, filthy SSB Hog
Or You Olde Fahrtz with a rotting log!!

But Pro or Con
This truth can be found
For that treasured upgrade
To this you are bound
As of this moment
All that is around
Is CW -- the only game
In the whole damn town
CW vs No-CW -- End the cry!!!!

In article <50fbg5$nrs@news.ais.net>, <carl@ais.net> wrote:

>>How will sticking a bunch of people on HF save our VHF frequencies?
>>Seems you'd want them on VHF.
>
>Point is, the removal of the code requirement will bring in larger
>numbers of otherwise qualified new hams ... both to the HF and VHF/UHF
>bands.

If one wants to be on VHF now, there is no code test.

The "used-car salesmen" of the VHF no-code license used the "we need lots of people on VHF to save our bands" argument. The amateur population bought it, fearful of another 220mhz debacule. Where are hordes of new hams?

As the saying goes: "Fool me once, shame on you. Fool me twice, shame on me."

I'm not buying another pig in the poke.

>You have to be smart enough to realize that most people think of
>comunicating with people in distant places when they think of ham radio.

I think most people think "passe" when they think of amateur radio.

>That means HF (OK, satellite, too ... but most beginners know about HF
>and don't yet realize that we've got satellites, too.)

So we should coddle them because of their ignorance rather than educating them, is that it?

>People stay away because they don't like the requirement and the
>restrictions on their operating abilities that it imposes.

With the current licensing structure, anyone who "stays away" because of a teenie little test that restricts them to a mere 4mhz of spectrum probably isn't really interested in the amateur radio service anyway.

>Nobody wants/likes to be classified as a "second class citizen."

What makes you think the hundreds of thousands of already-licensed hams are going to accept all these "new hams" with a codeless HF license? If you think the comments like "no-clue tech" are widespread now, why would they go away with codeless HF operators?

>Not enough numbers yet

When will you people realize... Numbers isn't the answer.
Quality. Quality is the answer.

The average person in the United States is a moron who sits in front of the television 4 hours a day. They can't tell you what the name of the Vice President is.

If you think these bozos are going to "save" the hobby, you're dead wrong.

>... and CW testing does not assure quality of use
>.. look at all the passed-the-CW-test lids on 14.3xx, for example.

No testing mechanism is perfect.

[more supposition/doomsaying deleted]

>I've responded IN KIND to the slurs and inuendo you and your compadres
>hurl at the "no-coders" and those with-code hams like myself who avocate
>the abandomnent of code testing.

Please quote one sentence, with the proper context, where I've insulted you.

I certainly have called into question your reading comprehension and personal integrity when you go around deliberately misquoting and fundlementally misrepresenting what I've stated, because I do not know if you're doing by accident (which the first would explain) or on purpose (which the second would explain).

>If you can't stand the heat, stay out of the kitchen.

I do. I let my wife do all the cooking.

>>Drew lives in Florida. What would you expect listening to local HF talk
>>when you live in the state with the highest per-capita of the elderly?
>
>Oh, come on! You can do better than that ... you don't seriously expect
>that anyone listening here will buy the argument that Drew only hears
>old fogies because he lives in Florida? HF doesn't cross state
>boundaries, huh???

Oh yes. Propagation has been just so wonderful lately.

Steve,

Roland's reply didn't merit the "simple people" remark. He simply
confirmed that he, too, only "joined" the ARRL for QST and the QSL
bureau service ... not with any expectation that his views would be
"represented" to the FCC.

So it's "a no-no" to politely say you're not satisfied with the ARRL?

Wrong again Carl. I'm quite sane. A good deal of my gear is home brew
and I've been building a large portion of my gear for most of my 36+
years as an amateur. But that's aside the point. I was just pointing
out that the vast majority of hams today can't or won't do any
significant building. This means that without the manufacturers there
will be no ham gear for anyone to operate in the futures- that is,
unless you see a radical change in the ham population when it comes to
building the ever more complex gear your so fond of? Oh, I forgot- the

ham radio you envision for our future will be composed only of graduate
E.E.'s ? Some egalitarian you are...

2187. Changes to rec.radio.* heirarchy?

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-02 00:00:00 UTC
From: lee@tosspot.sv.com
Message-ID: <887f33d4f52newsy@tosspot.sv.com>
Source record: 217706

Just a suggestion.....

Things have been getting worse and worse across the groups with spammers, hate wars and that kind of thing. (Once my mail's filtered, I usually find anywhere between 40 to 65% of any rec.radio.* group's traffic has gone into the round file)

Anyone else out there interested in -

A) Changing the herirarchy to a moderated one with clear rules of conduct

B) Maybe joining the growing movement to forbid cross-posting, period.

C) Adding a few (unmoderated as exception) groups to take make sure that those who need a forum still have one? I have in mind something like -

rec.radio.policy.cw

rec.radio.flame

- so that those of us who want to argue code versus no code and those who want to fight have somewhere to do it.

I'd like to see this happen, I'm even willing to put some of my limited recreation time into it (unless there's someone out there with a LOT of time on his hands?) - anyone else have suggestions or ideas? Post to the group but please, followup with direct email to me, also. If there are enough of us, perhaps we can get a CFV started.

Thanks.

That's the way *you* interpret it. I happen to interpret what he is
saying as "when you lower the testing standards, you get a lower
quality of people entering the service". I believe that there is
a basis for that statement (maybe or maybe not specifically as related
to ham radio, but certainly to society as a whole.)

Hi Scott,
You can download them from the ARRL/FCC page at URL:
http://www.arrl.org/fcc/#forms

Last time I did this for a friend -- it was tricky. Had to size the form
to fit my MS Word page -- takes a while. But its there if you want to
fight with it.

Hello, Folks:

I have just put a Ham Radio Home Page. It is still very much under
construction so suggestions are more than welcome.

Note that this page will focus mostly on Packet and other digital
modes.

Just go to:

http://www.trucom.com/ppages/marty

and have a look around!

Take Care & 73

Hi, Ryan:

Believe it or not, the VAST majority of users are still at 1200 bps.
There are many LANs and WANs at 9600 bps and a (very) few LANs running
at 56Kbps.

Sad, huh?

Yes, people at their stores are saying it. Heard it from several
different stores. It will be a handy talky version similar to the (2
meter only) HTX-202 model they sell now. They have an internet home
page at: http://www.tandy.com

No problem with switchers per se, but pirateing a computer supply is
not without its problems.

All switchers require a minimum load. In many computer supplies its
the fan. Some assume some minimum load on the mother board. They go
out of regulation or stop oscillating and smoke with less than the
minimum current draw.

My ICOM IC740 has the optional built-in 13.8 volt supply and it works
fine but it was designed for communications.

There is a big difference between 12 volts and 13.8 volts. In the
case of my Radio Shack HTX-202 2 meter handy-talky it's 6 Watts at
13.8 and 5 W at 12.0. That's a 20% drop in power. Most mobile
equipment assumes a vehicle with a running alternator which is where
the 13.8 value comes from.

My ICOM IC-740 uses the optional IC-EX243 keyer board. It has one 16 pin chip (25C945), 11 resistors, 1 pot, 5 caps, 2 diodes, and 1 transistor. Its maybe two square inches in area. Some of the pots are on the main chassis. Project seems likely.

Good luck

All liquid crystal displays get hard to read as you get off of straight on. Newer ones are better. It's the optics of the thing. You are dealing with the light going through two polarizing filters and they just don't work off axis.

Want to play a game? Look at a display such as your wrist watch while wearing polarized sunglasses (the only kind in my book). It's black. Now turn your watch 90 degrees. It's fine. The glasses are polarized the way they are to cut out road glare. Since glasses and watches are not a real rare combination, why don't the watch makers rotate their polarizers to work with sunglasses? Ain't life simple?

Only hope I can give is to try tilting your display a bit if you can. You probably have a greater angle from horizontal when you look to the overhead position than when you look to the underdash position. If you can arrange the plane of the display to be perpendicular to your line of sight it should be good.

Best

Drew

Sounds like you're having trouble mastering code so you can move to the HF bands. I am too. Until I do, I'm stuck on 2 meters. But unlike you I came to understand an old cleche a long time ago. Those who do not know history are doomed to repeat it. I want to know about the past. I like OLDE FAHRTZ. I learn from them. Someday I hope to be one - considering the alternative. We have a *smart net* on two meters here in Phoenix. It's open to anyone but mostly its a bunch of retired engineers telling each other about things they worked on. And guess what -- it's interesting as h... What have you accomplished lately?

Remember the folks you hear are old friends and frankly, I wouldn't consider someone much of a friend if I couldn't share my problems as well as my success with them. If you don't like what you hear, just tune down the dial a little to a blank frequency and have your own conversation.

What gives you the gaul to think that the world has to subscribe to your interests and do things your way. It takes all kind to make a world work.

Thanks for reading me out

>spent their winters in Korea?

Armond,

Give it a rest ... you know damned well that the "olde fartz" title is
actually "CW olde fartz" and is only bestowed on people who can't bear
the thought of a day without brass-pounding.

(Again, I don't know him, but) I'll bet that Drew holds the proper
amount of respect for the deeds of the soldiers you refer to above.

Nobody is trying to demean the memory of our veterans ... that's a
pretty long stretch, even for you.

However, even though we respect our veterans for their heroic deeds in
defending their country, we still retain the right to disagree with
their views on the code test issue and criticize them for their
shortsightedness and narrowmindedness ON THIS ISSUE.

Don't get so carried away with carrying the banner for CW that you begin
to equate it with "Old Glory" for God's sake. The phrase is "Life,
Liberty, and the pursuit of happiness." I don't recall "unless you
don't operate CW" in there anywhere ...

The fact that groups like TAPR, AMSAT, and others, along with quite a
few individuals had to beat the ARRL at its own lobbying game to get the
code-free tech is proof enough to any rational person. The ARRL has its
own agenda, and it doesn't agree with the views of the majority of US
hams. (and it clearly conflicts with the desire of most wannabes who
decide to stay away rather than subject themselves to the hazing ritual
of CW testing.)

>>>>
>
>Well old timer, what makes you think they can't comprehend?

Stupid questions like "Seen any Clover pileups lately?" and dozens more
that show complete ignorance of the new technology that's available and
the inability/unwillingness to understand its benefits/value, and how
the future of ham radio depends on progress, not stagnation.

>
>just curious, why does this hobby have to satisfy the public interest??? I
can't
>think of too many that do... Stamp collecting, RC cars/plaines/boats, raising
dogs/cats/
>etc yada yada yada
>

BECAUSE THAT'S WHAT THE RULES SAY ... it's the reason we have access to
many MHz of extremely valuable spectrum ... and it's the reason that
most of the drivvel that goes on on the HF bands today doesn't "cut it"
as an excuse for maintaining those allocations ... i.e. the reason we'll
lose them in the future if we don't change and increase our value to
society ... it's the Amateur Radio SERVICE (not the Amateur Radio
Hobby, as you mistakenly think) ... that's the legal definition that
justifies our very existence ... read the RULES and wake up!

WHAT????????????? Are you TOTALLY nuts????

Since when did:

(Amateur Radio) = (Icom .or. Yaesu .or. Kenwood .or. (whoever)) ????

Amateur radio has NOTHING to do with any of those companies or their
survival ... they could all go belly-up tonight at midnight and amateur
radio would survive (not that their respective egos would accept that
premise ... I'm sure they all think they're the "be-all and end-all" of
ham radio an we couldn't survive without their blessings being bestowed
upon us.

You apparently never built anything, right? It would do you a world of
good to learn how (as it would to most of the brass-pounding appliance
operators out there ...)

Doug,

Sounds like another variation of the "logic" behind the "keep the code" chant.

Just because something was relevant and meaningful to you (or someone else) "in the good old days" does NOT mean that it will remain that way forever and ever ... time passes and changes occur ...

There are many of us who would assert that it's a sad state of affairs when the "establishment" is so crotchety and inflexible as to refuse to accept change, progress, and modernization, even to the point of placing our existence at risk ...

Hello,

Have anyone information about programming the Kenwood TH-79E with your computer ? . I can't find any information how do do this.

I know it is possible because there is a programma called "EZCLONE" whichs can programs your portable rig.

1) What kind of hardware is required ?
2) Where can I found information how to programs my portable rig. I couldn't found anything in the manual or the Website of Kenwood.

L1: Approximately 30 turns about a say, 2 1/2 inch diameter form
You can vary the inductance via an alligator clip

C2: Variable capacitor, say, 365 pf from a BC band receiver

Start by varying L1 with C1 fully meshed; then adjust C1

Some operators in another radio service have mighty fine stations
running more than the legal 5W input, with towers and beams. And
they've never taken a theory exam.

NOTHING should be "the law of the land" unless it's ABSOLUTELY
NECESSARY for there to be a law saying it is.

The authors of the Constitution would surely spin in their graves if
they knew some of the stupid stuff that our government has made laws
about.

Not mandating an unnecessary testing requirement does not constitute
making something "the law of the land" ... laws are ACTIVE things
REQUIRING some action or PROHIBITING some action.

Being silent is PASSIVE ... and that's the way the law should be in a
hell of a lot more cases than it is ...

First, amateur gear is NOT "type accepted" by the FCC as is commercial mobile radio gear.

Second, in the commercial bands, users do not have access to the controls that determine transmitter frequency, power, etc. (except limited channel selection from a group of frequencies that the user is licensed to use ... most land mobie users are authorized for one channel pair ... or for a trunked system).

Third, land mobile users do not adjust and maintain their own gear ... they contract with service companies who specialize in that and employ licensed/certified technicians who *have* proved their knowledge and skill in properly installing, adjusting, and maintaining the equipment (this I know because I ran one of those busineses for a number of years and am, myself, licensed.)

>>The FCC has considered CW
>>irrelevant for years ... it's the ARRL and other counter-progress groups

>>who orchestrated letter-writing campaigns against dropping the code.
>
>Perhaps you can detail for me the evidence which suggests that the FCC
>cares one way or the other about the CW requirement, and give me a list
>of all those "counter progress" groups.
>
That's the point ... the FCC couldn't care less about maintaining the CW
requirement ... they've simply been willing to defer to the ARRL's
desires since the ARRL pretends to "represent" the majority of US hams
and nobody's raised a serious objection to that assertion to date.
(I know this as a fact, because I was once on a first-name basis with
the (former) Chief of the Private Radio Bureau at the FCC and he told me
personally that "until the ARRL backs off on Morse code, or they receive
significant opposition from a credible alternative "mouthpiece" group,
the code test will likely remain a requirement."

Fact.

You get low lifes anywhere. I have done both and have found good and bad. Most of the people I worked with in the Local REACT team where the salt of the earth. Not all wanted to become hams. On the other hand I have met a number of hams that think they are god's gift to RF and I wouldn't trust them to turn on a light switch.

So Mike, beware of those like Burt, (damn, I promised myself I wouldn't get caught up in his bad mouthing posts. He is one of those bitter people who get pleasure in putting down everything and everyone.) I have read the threads to your post and they are filled with the info you require.

Both have their good points and bad points. Just depends on what you want to do. With the recent changes to the licencing structure ham is easier to get into and some used ham gear will cost no more than some new CB equipment.

Enjoy.

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
29 Aug 96: Active to minor storm
30 Aug 96: Active early in UT day

The most significant geomagnetic disturbance for
the month was observed on 29 August, with an A index
of 24. This disturbance was associated with a solar
coronal hole. Geomagnetic activity declined early
in the UT day on the 30 August.

Isolated active periods were observed on the 23 August,
and during the interval 25-28 August.

==========

4. IONOSPHERIC DISTURBANCES (for Australian Region)
1-5 Aug 96: spread F observed local night hours, northern
and southern region.
12 Aug 96: depressed 15-30% during local daylight hours
at Darwin only.
13 Aug 96: depressed 15-20% during local daylight hours
at Darwin only.
15 Aug 96: blanketing sporadic E observed during local day and
spread F observed during local night,
northern region only.
16 Aug 96: blanketing sporadic E observed 05-12 UT,
northern Australian region.
19 Aug 96: depressed 15-20% during local daylight hours
at Darwin only. Spread F observed local night,
northern region only.
20 Aug 96: depressed 15-20% during local daylight hours
Darwin only. Spread F and blanketing
sporadic E observed during local night.
30 Aug 96: depressed 30% during local day, southern
Australian region. Northern region remained
near predicted monthly values.

The depression on the 30 August is believed
to be associated with geomagnetic storm activity on 29
August. Degraded HF communications at mid to high
latitudes were likely to have been experienced on 30 August.

Ionospheric depressions were occassionally observed at Darwin
during local daylight hours for the month of August.

Right Steve they also mailed the survey to a number of non-members randomly selected from the call sign data base. Our Division Director and the President of the ARRL were at the Alamogordo NM hamfest Saturday and explained how the survey was undertaken. There will be another survey in the near future addressing other issues. The Board of Directors seems to still be somewhat inclined towards a code requirement but, unlike some of the folks here, seem willing to face changing times. They visited at my AMSAT table for a time and seemed quite reasonable and interested in what the general membership thinks.

Hello,

Have anyone information about programming the Kenwood TH-79E with your computer ? . I can't find any information how do do this.

I know it is possible because there is a programma called "EZCLONE" whichs can programs your portable rig.

1) What kind of hardware is required ?
2) Where can I found information how to programs my portable rig. I couldn't found anything in the manual or the Website of Kenwood.

It depends on when you became a Tech. If you are an "old"
Tech (before about 1981), then you simply need to pass the
13WPM.

If you are a "later" Tech, you will need to also pass the
General written exam.

Perhaps in your country, but not here.

In the US, we have both a theoretical and a practical element
to our examination elements. The theoretical is merely a multiple
choice exam. The practical is the code examination.

I would like to point out that I wrote about the _purpose_ of the
exam, as I understand it. Not the actual content of the exam. I have
seen the questions you have in a general class examination, thanks
to one of my friends who took the test when he visited USA the last
time. The examinations in USA and Finland seem to be pretty similar.

>by his peers.

You must have missed all the attempts that have been made on this newsgroup, in packet radio bulletins, and in QST (5/95) to explain that the equipment advertised as "9600 baud ready" actually isn't.

Also, it often seems that amateurs tend to believe such a claim in a commercial advertisement, and tend to disbelieve claims from their fellow amateurs who happen to have tried it and found it was not true.

This is unfortunate, and not only for their own wallet but also for the efficiency of packet radio as we all use it.

When a reasonably well documented article like the one in QST fails to hit the brains of the newcomers, we have a problem. Plainly stating "what Kenwood tells you is not true" is not going to make much impact, and I doubt any amateur is interested in going through a legal case against the radio manufacturers and distributors about making false claims in their commercial advertisements.

Absolutely. Moreover, the NBA seems to favor these "olde fartz" like
Michael Jordan, who don't use a ladder to drop a ball in a hoop. Why,
may I ask? It's the 90's, and ladders have been around for thousands
of years, man! Besides, what's the purpose of tossing a rubber ball
around, anyway? We need the space, and the money, so let's just
sell all basketball courts...

>tomc@tiac.net

Tom,
For your information, the antenna is basically a T2FD designed back in the 50's by the Navy. It is a folded dipole with a resistor in the middle opposite of the feed point. The resistor is usually greater then the type of feedline you are are using. In other words you would use a 390 ohm resistor for a 300 ohm line. A popular way of feeding the antenna is using a 6:1 balun to feed a 50ohm coax. As to the size of the resistor - it needs to about 30% of the max power you plan on running. Yes the antenna is not as a good as a dipole. But you gain plenty of bandwidth for running one antenna. A T2FD is only 47 feet long and will cover 40 to 10 meters. If you use open ladder line you can also use it on 80 meters.

If you want more info let me know. I have several articles on the antenna.

I don't hear too many problems in the Extra bands when I listen there,
so the CW "filter" must work. Maybe the 13WPM isn't high enough. I know,
let's call for the elimination of the 5 and 13WPM code speeds, and just
have a single, 20WPM code speed. Yeah, sounds good to me.

From: gary@carcs1.wustl.edu
Message-ID: <50hves$l41@lex.zippo.com>
Source record: 217412

My wife and I are no-code technicians. We have been practicing CW for about a year and are nearly ready to take the 13 WPM test. I have a few questions I'd like to ask.

(1) We've used tapes, PC programs, and practice code boxes. Generally speaking, they all use tones from about 700 to 900 Hz. Is that about what we can expect on the test?

(2) Computer program "Super Morse" has a practice test which consists of a one-sided QSO (only one operator sends code). The MFJ code practice box has QSOs in which two operators exchange information (frequently switching back and forth). Which are we more likely to encounter on the test, a one-sided or a two-sided QSO?

(3) I understand that the test consists of listening to a QSO and then answering ten questions about its contents. Is this test multiple choice, like the written tests?

(4) Does the test run for a set period of time (say, 10 minutes)? I guess what I am really asking is: Do the 5, 13, and 20 WPM tests run for the same length of time, or do they all contain similar QSOs and run for different periods of time?

(5) Is the QSO easy to hear? Can we adjust the volume?

If anyone has any insights, hints, or anectdotes about the CW test I'd like very much to hear them.

Thanks.

2236. Ton O' Radios Special Event - Results

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-03 00:00:00 UTC
From: eldridge@cax.ES.xerox.COM
Message-ID: <322CBB30.F6E@cax.es.xerox.com>
Source record: 217414

The Xerox Amateur Radio club WD6CZH made 226 contacts for a total of 8,676 pounds of radios during the Ton O' Radios special event. It was a lot of fun! Thanks to everyone that participated.

George

Carl and Drew have valids points. That makes three against you Jim.
Drew has passed the tech plus code test, I've passed the general code
test. We are the new generation of HAMS, less than 50 years old, who
firmly believe the code requirement is ludicrious in 1996.

KB0WOB Charles in Denver

PS - Jim, Drew MUST have a radio of some kind in order to have
made his observations of the HF bands. They are generally correct.

Actually, if you're going to *have* a code test, having one which tested to
see if you could effectively receive the mode (5 wpm isn't effective) is
better, no?

I mean, let's stop farting around.

Darwin Teague wrote:

> Could you please tell me how to receive the video? Is it a TV-UHF frequency? I
> have an old Rabbit receiver, but don't know what frequency it's on....

You can receive ATV the following ways:

Using an ATV down converter (converts 439.25 to TV channel 3) and a
70cm Beam Antenna

Using an old TV or VCR with manual tuning hooked up to an outside
antenna.
You will have to tune the TV to UHF channel 14 and then try using
your
fine tuning control and tune DOWN. The ATV frequency is BELOW
UHF ch 14.

Using a newer TV or VCR that is cable-ready. Hook the TV or VCR up
to an
outside antenna and then set it for CABLE CHANNEL 60.

The first method is BY FAR the best. Down converters are around $80 and
you can
make your own beam (I did). Make sure your receiving antenna has the
same
polarity as the transmitter. Cross polorization loss on 70cm can be as
much
as 20db.

2245. Re: Single chip electronic keyer (Curtis)

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-03 00:00:00 UTC
From: MADJID <orion@odyssee.net>
Message-ID: <322CF695.5880@odyssee.net>
Source record: 217423

Curtis chip can be purchased at Mouser Electronics
http://www.mouser.com ($19.95)
also Kit sold by NorCal QRP Association:
http://www.fix.net/~jparker/kits.html

Schematics of the Curtis Keyer can be found in old versions
of the ARRL Handbook.

You've got two versions of the chip one is 16pins (8044),
the other one 20 pins (8044ABM). If I am right the ABM version
allows you to have a speedo-meter and mysterious iambic mode B
which is supposed to send a dot after a dash and a dash after
a dot (So how do you send a final dot or dash ..--..)

>get through, you must blow it off to keep your rate up.

Quote things when you want to complain about them. That way no
one will wonder what you're complaining about, and nobody will
have to keep retyping it so you can read it again. No, I wasn't
boasting about anything. I said the DX sticks to the bottom 25kc's
of the band because most DX stations want to work 5 stations
a minute, not five words a minute. Obviously, you never worked me
on CW, leave out the 'ur' and the ',' and the '73' and the 'DE' and
then you'll be close. Hundreds of stations I have worked would
much rather have a QSL card from me for thier DXCC than they
would have an 'interesting QSO' with me. They don't care what my
name is, or what kind of job I have, or where my wife is from, or
what kind of antenna I have. They want a QSL card. Period. When
a hundred or two hundred stations are calling you at the same time,
you work as many as you can as fast as you can. When only one
station is calling, you talk to him for 10 minutes, or an hour if you have
something to talk about. Lots of stations I work ask for QSL info
before they tell me their name or give me a signal report. If that
bothers you Todd, sorry. But it's not going to change, because it's
a part of the hobby that many people enjoy.

It amazes me how far off topic we can get when we move from the
discussion to the personal insult mode. We started out debating
if the CW test should be retained as a part of the testing, and now
we are in the 'knock DX' mode. I know what you do for fun on
internet, and but I don't know what you do on the radio, and I have
better things to do than a) worry about what it is you do or don't
do or b) knock what you do or don't do.

You don't like CW. Fine. Don't use it. You don't like DX. Fine. Don't
get on HF and work any. There are a lot of aspects of ham radio that
I think are totally rediculous and a waste of time. Like FM repeaters,
Packet, and traffic nets. But if you want to do them, be my guest. If you

enjoy doing them, it's not my job to knock them. Some hams love contests.
Some hams hate contests. Thats the good thing about the hobby,
we all don't have to be interested in the same thing. The only 'common
interests' we all must have are the abilities to pass the required tests for
the
class of license that we want. After that, we can all go our separate ways.

>"purpose" part ...

All part of the problem with the new breed, Carl. You've been a ham
for 20 years, right ? When you got started, how many companies were
advertising 10 METER DIPOLES for sale in QST ? When you hooked
up your first TNC, did you BUY a READY MADE cable to go to your
radio ? I doubt it. At least I sure hope not.

The 'new breed' may be more computer literate, but they sure appear to
be more soldering iron lame, if they have to BUY dipoles and TNC cables.

You best hope Icom and Kenwood and Yayhoo don't go away, because
I doubt too many nocode tech's will be building HT's from scratch.

The 50 watt limit came straight from Wayne Overbeck a concerned
citizen per the report). If that isn't blatant politics I don't know
what is.

>
> Now what about the meaning of this to hams? Is the ruling so burdensome?

Unless you are a Registered Professional Engineer in the state of your
residence you are not qualified to make a Environmental Survey that
will hold up in court, if you are challenged.

> I don't think we know as yet. But I've made a few field strength readings
> before. And I've prepared a few dozen environmental impact statements.

> Rich W2RG
>

It might not be possible to predict the value of Near Field intensities
in most Ham installations with enough accuracy to assure compliance
with IEEE C95.1-1992. Re-radiation and coupling within the wiring and
plumbing of a typical house would require extensive measurements,
which would have to be made for every frequency transmitted this is used.
A simple 40 Meter Dipole over the house at 25 feet would keep one busy

for quite a while making measurments. The hot spots would not be
easily predictable. Remember the standard is absolute. Don't be confused
with far field calculations, they apply only in a few UHF cases.

Lee:

You give no call but do you any other credibility to call for such
action?

Don't, get me wrong, please. You do have many good ideas. I don't
think "moderated" is the way to go. This would impose a helluva time
consuming obligation on someone, unless you choose to volunteer. <g>

The recent problems have mainly to do with never ending barbs
against the ARRL, and the _never_ ending arguments of code-no-code.
The latter has no answer EXCEPT to cave-in to those who insist NO
qualifications should be necessary to blabber wherever on the air
waves, to satisfy so-called "my rights". And their own pscyche.

The better answer may be to establish a new sub-group such as
"rec.radio.amateur.politics". This would be an appropriate place to
BLABBER whatever one's feelings of AR.

There are many degrees of "amateurs". Let the _lazy_ ones,
malcontents and others get it ejaculated!

If you contact YAESU, the will sell you the complete technical manual
with info on all of the FT-101 line. It is well worth it. If you have
access to a WWW browser, point it at:

http://www.yaesu.com

and drill down to the world wide addresses and phone numbers.

The procedure is to is to tune the preselector at reduced current (.1 a
or less) for a null and then advance to full operating current
(approximately 280 ma) to tune the loading which is usually set to 3-5
depending upon the band setting. At this current you twiddle the
loading, preselector and drive to get the best null at the target
current. I haven't tuned up mine in a while so I doing this largely
from recollection. Caveat emptor! Get the manual. By the way, keep
the time the transmitter is continuously on to 10 sec. or less until you
are satisfied with the tuning--this will save your finals!

No. I'm speaking of the selfish OLDE FAHRTZ who are endangering the very future of ham radio as we know it by stubbornly refusing to admit that it's now 1996 and the outdated Morse code requirements have no place in today's amateur radio service.

If YE OLDE FAHRTZ hadn't fought against the no-code license for as long as they did, we probably could have saved 220-222Mhz.

Remember, 220 was taken away from us BEFORE the no-code Tech license was created. My guess is that the unwillingness of YE OLDE FAHRTZ and their cronies in the ARRL to support a no-code license had quite a bit to do with this.

>to submit to the FCC with my updated info?

It still is form 610. You can download a copy off the FCC website.
For now, you still have to print it out and mail it back to them,
though fully electronic filing is only a matter of time now that
digital signature technology has arrived. The site is www.fcc.gov.

If you don't have web access, the ARRL keeps paper copies of the
form on hand and will mail you one. Or you can pay W5YI $5 to mail
it for you (can you say "ripoff", I knew you could).

Hi Carl,

You gotta laugh at these stereotypical fools. They automatically assume
that anyone who is in favor of removing the CW requirement has just GOT
to be an uncouth, unworthy, lazy, etc., no-code Tech.

Are they unable to read a simple callbook/callsign server, or do they
just prefer to keep their heads in the sand and think this way because it
makes their own pro-code pleas sound more convincing to themselves?

-Drew in Sunny Central Florida-
KF4DDM
(who HAS, believe it or not, passed the code test...but realizes that it
is an outdated, unneccessary requirement, and should be done away
with in the interest of preserving the amateur radio service as we

Of *course* he's ignorant, Christopher. What else could he be when
entering a new field? Everyone starting out in a new area starts out
ignorant. But ignorance can be cured, and that's what Rob and Dana were
trying to do for you, cure your ignorance and try to prevent you from
passing it on to someone else who is ignorant. Ignorance doesn't equate
to inability to learn. That's what the tag *stupidity* is reserved for.
If, after you've had it explained to you in excruciating detail why your
choice is faulty, you continue to defend the faulty choice, then *that*
is stupidity. And alas that *is* incurable, so there's no use wasting
any more effort trying.

It's typical of all Yaesus.
We have an FT2400 that does it. A friend (with yet a different Yaesu radio)
came up with a kludgey fix that did work... break one of the sensors, so that
the knob only works in one direction.
My solution is simpler. Keep spinning the knob until it randomly lands on the
channel you want. Yaesu = junk, IMO.

>ignorant. But ignorance can be cured, and that's what Rob and Dana were
>trying to do for you, cure your ignorance and try to prevent you from
>passing it on to someone else who is ignorant.

The original question was "are there any rigs from the big commercial companies that will work 9.6k packet?" (not a direct quote from the poster)

I answered that a (my) tm-451a "will work 9.6k packet", so the answer was, and still is, yes. I also included the TXD in the post, as to show how efficent that rig is.

Now here are some added points...

Does the 451a work on 9.6k packet...yes.

Did I answer the original question correctly...yes.

Are there better radios than the 451a for 9.6k packet...yes.

Is it true that a 250ms TXD does not utilize 9.6k packet effectively...yes.

Did I already know all those things...yes.

This whole thread was a forum for some who wish to pick apart my every post, and move away from the original issue...which was the question that I answered correctly.

Take care Gary.

Ignorance doesn't equate
>to inability to learn. That's what the tag *stupidity* is reserved for.
>If, after you've had it explained to you in excruciating detail why your
>choice is faulty, you continue to defend the faulty choice, then *that*

programming DSP engines? Doesn't sound like ham either, Cecil. Although
your point is understood. CW and a simple xcvr is the basis of ham radio,
everything else is a development. Think of it as a small history course.
5WPM is sufficient, anything faster as a requirement to band privileges
is, as you say, a step backwards.

Let's look at the big picture (reality). The ONLY place where CW is used at all anymore is the ARS. That's it. I don't call that thriving. I call that hanging on by its fingernails.

Source record: 217622

If you contact YAESU, the will sell you the complete technical manual with info on all of the FT-101 line. It is well worth it. If you have access to a WWW browser, point it at:

http://www.yaesu.com

and drill down to the world wide addresses and phone numbers.

The procedure is to is to tune the preselector at reduced current (.1 a or less) for a null and then advance to full operating current (approximately 280 ma) to tune the loading which is usually set to 3-5 depending upon the band setting. At this current you twiddle the loading, preselector and drive to get the best null at the target current. I haven't tuned up mine in a while so I doing this largely from recollection. Caveat emptor! Get the manual. By the way, keep the time the transmitter is continuously on to 10 sec. or less until you are satisfied with the tuning--this will save your finals!

Several inverters already exist for probably a lot less in time, effort, and money than you're talking about, and, yes, we're talking about 250 Amps D.C. for 2500 Watts at 12 Volts. There are also 24 volt inverters that use less current. Some of them also charge the batteries at high currents from 120 VAC.

Some inverter companys are:

Trace Engineering (www.eskimo.com/~trace)

Statpower (Canadian)

Heart interface

Vanner

(more too)

Sounds like they didn't control for age of onset.
Major flaw.
"Everyone" will die of cancer if they don't die of something else first.

So it sounds like another result of this survey could be: Hams, who
are often exposed to RF, tend to live longer than the general population.
This interesting effect might well be caused by their RF exposure.

I've looked at many studies of low level exposure to potential disease
causes (2nd hand smoke, E fields, H fields, aromatic ring compounds,
asbestos, allergens) and found that most of them have serious flaws.
Doing the controls and the statistics for these studies is VERY tough.

2278. Single chip electronic keyer (Curtis)

Source record: 217626

Hi there,

I'm looking for persons who are subscribed to the German CQ-DL magazine
(for hams).
In the January 1995 edition of CQ-DL, there is an article about
creating a full blown CW electronic keyer (bug) wth ONLY one (Curtis)
chip.
Title of the article is: "CW-lambic keyer mit einem Baustein"

It would be great if someone could send me a photocopy of this article.

My address:

Robbert J. van Herksen
Groenendaallaan 7
4002 AH Tiel
The Netherlands

REALLY great it would be if someone could fax it to me.
My fax number is: +31 344 622813

Maybe you are looking for some information yourself, I would be pleased
to help you in return!

Thanks a lot for your great help!!

Since I was the one who challenged Peter's assertion about
how the phone network performed, I should now add some words
in his defense (as if he needed a defense).

I received e-mail that I was heavy-handed in my posting.
That may be true. If so, I apologize to Peter and to all.
I have no doubt that he posted about his actual experience, and
not just the "conventional wisdom" of phone systems failing in
emergencies. I was gratified that his experience was not the
most typical one, apparently, as other posters said they had
no problems.

The main thing that takes phone systems "off the air" is all
those folks who grab the phone to ask aunt Nelly "Did you feel
the earthquake?". It wouldn't be so bad if the exchange were
simply "Is everything alright over there? Thank goodness, you
are OK. We should hang up now, so the real emergency calls can
get through. Bye." Not likely, eh. It's human nature to want
to tell everything and have the comfort of a familiar voice
after a big shaker. We need to resist that urge.

How about the newscasters who gauge the severity of a quake
by telling us how many calls the police department received.
The implied message is that we ought to call the police any
time we think we felt a quake. Really logical!

Again, I'm sorry if I stirred things up for you, Peter.

I am surprised at your comments about the RSGB, however, I see that you haven't been licensed very long so you will not have seen all the past work the RSGB has done.
Over the 25 years that I have been a member I must say that things have changed (for the better).
A great deal of work has been put in to extending many of the licensing regulations.
I think if you had have been round many years ago that you would understand what I mean.
BTW. I don't mean the RSGB is squeaky clean, they may well have to revise certain things in the future to maintain membership.

Everyone has different definitions of the hallmarks. Some say QSLs,
some say CW, some say experimentation which is my interest. If you
assume that everyone must share your particular enthusiasm then you
will be dissapointed.

> Please, remember the enthusiasm with which you embraced your first

My first QSOs were on 432 MHz AM back in 1962 with homebrew gear. Every
QSO seemed a great achievement then. Unfortuneately you will not find me
on 7.111 MHz as, in Europe, we only have 7.0 to 7.1 MHz although it did
go up to 7.15 MHz in my SWL days. If you use SSB on 18 MHz then you
should find me there when conditions improve.

Well, I was leafing through the May QST in the "reading room"
a while ago and noticed that they *were* including T/R time
measurements in their radio reviews (the 2m HT "shootout").
Looks like they may have been paying attention after all. No
BER numbers in this article though, but I suppose they assumed
we wouldn't try to use a 2m HT for 9600 baud. (I wouldn't.)

Now you're beginning to get it Carl.

The majority of amateurs are not building their own gear today (a readliy ascertainable fact from just looking around and listening on the bands). There is very little chance that this will change in the future as the gear gets ever more complex. Do you need anyone to tell you why its so hard to get parts to build anymore? That's right, because the overwhelming majority of hams don't really want to build their own gear.

It would follow then that without the manufacturers to supply new gear, it's going to be pretty hard to grow amateur radio to the non-building majority [you think its hard to sell cw to prospective licensees, tell them they have to build their own gear before they can get on the air- this isn't the 1930's, you know...)

And it doesn't matter whether its K-wood, Icom or whoever that's doing the manufacturing. [The arrogance of anyone who thinks he can "save" ham radio if we'll only follow his prescription is whole other topic- right along with whether we are meeting the mandate of Part 97 concernig our role in advancing the art]

Once we reduce the difficulty of getting into ham radio- via lesser tchnical exams or removal of the code, your choice- the increased number of new hams that will show up won't want to wait around for a 21st century Heahtkit to supply them with something to build before they can get on the air.

Rather than focus on eliminating the cw requirement alone, why don't you trot out the idea that the newcomers to the hobby all ought to build their rigs before they are allowed to get on the air- bet that will make you a real popular fellow.

MFJ-956 is $39.99. One year unconditional money back warranty. Comes
with a schematic. By the time you add up the cost of the box, the
knobs, the switch, the fixed inductors, the variable capacitor, and
the 2 ea. SO-239 connectors, you may decide to keep it.

> KF4DDM

Wow, I only heard that response about 100000000000 times before.
What it really tells you is that even people with single-digit
IQs can pass a CW test, which should be encouraging.

There seem to be a lot of people around with rather poor logic
skills - the fact that you run into some lousy drivers tells us
that the driving test is not necessary?

Perhaps for every lid you hear on 75m there are a million more
who would be there except for their inability to pass a CW test.
This is just as logical a conclusion and would suggest that the
CW test is doing a good job.

What you need to do if you don't like this stuff is turn the big
knob in the middle of the radio until the big numbers say something
like 3520, put the "CW" switch on, and there you will indeed find
people who have passed a CW test andd actually use CW. It's very
hard to belch on CW.

I haven't listened to 75m in years apart from an occasional contest,
and I'm having fun. And to those who say "CW should be allowed, just
not tested for" I say that it was only because I had to learn it in
the first place that I discovered how pleasant it is - otherwise it's
like deciding that you don't like a particular type of vegetable when
you haven't actually tasted it. And veggies are good for you, right?

> use CW. CW consistantly is a popular mode used by foreign DX stations.

Then testing is no longer needed in order to operate on the HF
frequencies. Since it is so popular, amateurs should be flocking to it.
Thus government coertion is no longer required.

But we all know the great and terrible secret about the abolition of
Morse code testing. Once Morse code testing is abolished, it will have
to continue to survive on its own merits. Since most newly licenced
amateurs will not bother, Morse code will become an interest of only a
few amateurs, like the use of Double Sideband Transmitted Carrier
Amplitude modulation.

> A goal of the amateur radio service is to promote international
> goodwill; thus a code examination helps ensure that people will be able
> to communicate with these foreign stations.

Again, Deignan applies a US policy objective incorrectly. For one thing,
knowledge CW does not foster goodwill. That is logically false because
it assumes that it unless the amateur knows Morse code, then the
international goodwill component of amateur communications is frustrated.
In contradiction to that notion, international goodwill can be fostered
by any other mode in use by amateurs. Moreover, we just have to observe
the shenanigans of some of the phone band operators and we can appreciate
the weakness of the argument that knowledge of CW fosters goodwill,

international or otherwise.

Another reason Deignan's notion is unnacceptable because it attempts to overlay a domestic policy objective, i.e. fostering goodwill, in such a manner that it is seemingly a mandatory requirement. Moreover, it further attempts to render a domestic requirement into a international sphere.

> US amateurs are somewhat
> stuck up, and often forget that foreign hams are not always technically
> on par with the equipment that is available here.
>

Ain't it the truth. They even have the gall to assume that what is a desirable non-mandatory policy objective in the US and then try to apply it as a international obligation. I think the describing some US amateur as being "stuck up" is being kind.

This is happening on all of the newsgroups I read, not just those in the rec.radio.amateur.* hierarchy.

: Anyone else out there interested in -

: A) Changing the herirarchy to a moderated one with clear rules of
: conduct

Definitely not. Every time the S/N goes down in any group, the first thing someone comes up with is moderation. We don't have moderators on the ham bands; why have them here? What's so hard about just ignoring what you aren't interested in?

Moderation may solve the problem at hand, but it introduces new problems, and creates many more hard feelings. Who's crazy enough to want to be the moderator? And what happens if the moderator doesn't work out? It's nearly impossible to unseat a moderator.

: B) Maybe joining the growing movement to forbid cross-posting, period.

Huh???

: C) Adding a few (unmoderated as exception) groups to take make sure that
: those who need a forum still have one? I have in mind something like -
:
: rec.radio.policy.cw

: rec.radio.flame

: - so that those of us who want to argue code versus no code and
: those who want to fight have somewhere to do it.

We already have such a forum. Code/no-code debates belong in *.policy.

Re: FCC forms

If you do not have web access (or, access for downloading that file
with the 610 form) you can ring the FCC's forms distribution centre on:

1 800 418-3676
(FORM)

You will need to navigate a menu with the push button phone, and then
you reach a spot where you leave your name, address, and form or forms
you need. I am in Arizona, and I get forms from the centre in Maryland
in 2 or 3 days, most of the time.

If you download the forms, remember to photocopy the front and back onto
a single sheet of paper. You are not required to use the same type of
beige paper FCC previously used on the 610 forms. This is also due to
the fact there is a fax-on-demand service (the number escapes me now)
to get forms sent immediately to your fax machine. One of the following
toll-free numbers may have info on that:

1 800 322-1117
1 888 322-8255 (this is the new number for the FCC's Gettysburg phone
centre, per a press release a couple of months ago)

And just how is that, Jim?

If you'll put your adamant pro-coder stereotypes ("anybody who is in favor of eliminating the Morse requirement MUST be a no-coder or a CB'er/ham radio wannabe") aside for a moment and bother to check your callbook/callsign server, you will see that I have successfully passed examinations in both theory and Morse code as applicable to obtaining an amateur radio license.

The fact that groups like TAPR, AMSAT, and others, along with quite a
few individuals had to beat the ARRL at its own lobbying game to get the
code-free tech is proof enough to any rational person. The ARRL has its
own agenda, and it doesn't agree with the views of the majority of US
hams. (and it clearly conflicts with the desire of most wannabes who
decide to stay away rather than subject themselves to the hazing ritual
of CW testing.)

>Well old timer, what makes you think they can't comprehend?

Stupid questions like "Seen any Clover pileups lately?" and dozens more
that show complete ignorance of the new technology that's available and

the inability/unwillingness to understand its benefits/value, and how
the future of ham radio depends on progress, not stagnation.

>
>just curious, why does this hobby have to satisfy the public interest??? I can't
>think of too many that do... Stamp collecting, RC cars/plaines/boats, raising dogs/cats/
>etc yada yada yada
>

BECAUSE THAT'S WHAT THE RULES SAY ... it's the reason we have access to
many MHz of extremely valuable spectrum ... and it's the reason that
most of the drivvel that goes on on the HF bands today doesn't "cut it"
as an excuse for maintaining those allocations ... i.e. the reason we'll
lose them in the future if we don't change and increase our value to
society ... it's the Amateur Radio SERVICE (not the Amateur Radio
Hobby, as you mistakenly think) ... that's the legal definition that
justifies our very existence ... read the RULES and wake up!

Actually, though I have a spell checker, I only use it when I'm writing
a formal document in the word processor application ... not when I'm
banging out posts or e-mail in the newsreader or mailer ... both of
which use the EPM editor as their default editor, because I've to a PGP
shell patched into EPM.
(so, to be honest, I screw up a word or make a typo from time to time,
too in this mode)

WHAT????????????? Are you TOTALLY nuts????

Since when did:

(Amateur Radio) = (Icom .or. Yaesu .or. Kenwood .or. (whoever)) ????

Amateur radio has NOTHING to do with any of those companies or their survival ... they could all go belly-up tonight at midnight and amateur radio would survive (not that their respective egos would accept that premise ... I'm sure they all think they're the "be-all and end-all" of ham radio an we couldn't survive without their blessings being bestowed upon us.

You apparently never built anything, right? It would do you a world of good to learn how (as it would to most of the brass-pounding appliance operators out there ...)

2312. 6 meter antenna questions

Newsgroup: rec.radio.amateur.misc
Date: 1996-09-03 00:00:00 UTC
From: John Kirby <jkirby@mcs.net>
Message-ID: <50g2tb$a1l@Nntp1.mcs.net>
Source record: 217730

I just picked up an old Saturn 6 halo, does anyone have any
information on this antenna, old manual or the like?

Also I plan to make a copper J pole antenna for 6 meters, I know that
the diameter of the pipe effects the feed points, I plan on making it out
of 1 inch or better tubing. Does anyone have the formula for the spacing
and attachment points? Thanks KB9NLY

Obviously, there is no such requirement (you can talk about just about anything you want (except business, third party traffic to countries without the proper agreements, and a few other things).

I believe you're referring to Drew's comments about the apparent preponderance of old people on HF, talking about their health problems, etc.

In Drew's defense, I don't think he intended to say that folks can't talk about what they want if it's not of interest to him or others, but rather just to state that it's dissappointing to find so little else to listen to ... in otherwords, there's a growing lack of diversity in our ranks ... newcomers are mostly no-coders and while many, many would like to use the HF bands (and could make very capable operators without need for CW skills ... 'cause they'd be using SSB, Clover, Pactor, etc.). However they find the code so distasteful and the attitudes (in general) of the pro-code "establishment" so offensive that they don't "jump through the hoop" and "upgrade."

> I am 42, grey-haired, going bald and have been a ham for over
>twenty years, does this make me an old fart?

Hell no! I'll be 46 in a month, and have also been a ham for over 20 years and I'm not an old fart either ... just opposed to code testing.

BTW ... one can actually have the opinon that the code is neat and fun and still not be a "CW olde farte" ... it's only the rabid CW ops that want to stagnate the ham community on their level, want to keep the "riff-raff" off of "their" bands, make unidentified "'nother damned no-coder" comments when a newcomer shows up on the repeater, and exhibit similar narrow-minded, bigoted behavior that qualify as "CW olde fartz."

>the future of ham radio depends on progress, not stagnation.

Come on Carl, get real. The above 'stupid question' has nothing to do
with not understanding the technology, it has to do with UNDERSTANDING
that technology for the sake of technology is a waste of resistors.

DAMN FEW people are using Clover. And I would venture a guess that the
hams who ARE using it aren't using it to have 'meaningful intelligent
conversations' or to 'improve international relations' with other countries.
Anyone who is using it is probably using it to forward BBS BABBLE on
HF. Packet traffic on HF isn't people - it's computers forwarding BBS
BABBLE. I don't know about in your part of the world, but in my part
you can't find another real person on PACKET on HF, more less Clover.

If Clover is the closest thing you have to illustrate 'modern digital modes',
on ham radio, you're in trouble. You don't seriously think that your five
million new hams are going to buy an HF radio, put up an antenna, buy
a Clover modem, stick it in their computer, and sit and watch Fumbly Bumbly
Bumbly BBS software forward Packet Babble on HF ? Or connect to an
HF BBS ? Sure they will. Because they can't do the same thing ten times
faster with a computer, a 20 dollar modem, a LL BBS, and no ham ticket, right ?
If you want to attract your five million new hams, you need something that
is small, fast, inexpensive, and doesn't require a ton of aluminum in the
back yard. Clover isn't the ticket.

It's your imagination that people are resisting 'technology'. Technology
must be a) affordable and b) useful before the masses are going to
accept it for general use. You know that, that's why you won't tell us
about all the secrets you are developing in the lab....

You have to realize that now that we all use this wonderful medium called
Internet, Packet and Clover are probably on the way out, not on the way in.
Packet was at one time an almost viable means of spreading information
amoungst the ham community, but it's OBSOLETE now that the internet
is here. It was fun to screw around with, but it's not worth the trouble any
more - too slow, too unreliable.

Ham radio is ham radio. And it always will be ham radio.

Hafa Adai,
Jim KH2D

>ham radio you envision for our future will be composed only of graduate
>E.E.'s ? Some egalitarian you are...

No, he ham radio of the future will not be composed only of graduate
E.E.'s ... but there will be more building of gear, from kits and from
scratch.

If more technically-inclined people were getting into ham radio, instead
of appliance operators, we'd be better off.

And if we're so dependent on "rice boxes" that we'll have nothing to
operate without them and shrivel up an blow away, we're not fulfilling a
major part of the "purpose" set out in the Rules as justification for
our existence ... you keep forgetting (or conveniently ignoring) that
"purpose" part ...

And I'm NOT an egalitarian ... I think we should OPEN the ranks, not restrict them to a small segment of the potential population ... the CW forever crowd is, however, in a perverse, backward sort of way ... they're the ones who want to keep folks out ('cause they're not good enough, right???)

Doug,

Sounds like another variation of the "logic" behind the "keep the code"
chant.

Just because something was relevant and meaningful to you (or someone
else) "in the good old days" does NOT mean that it will remain that way
forever and ever ... time passes and changes occur ...

There are many of us who would assert that it's a sad state of affairs
when the "establishment" is so crotchety and inflexible as to refuse to
accept change, progress, and modernization, even to the point of placing
our existence at risk ...

The 50 watt limit came straight from Wayne Overbeck a concerned
citizen per the report). If that isn't blatant politics I don't know
what is.

>
> Now what about the meaning of this to hams? Is the ruling so burdensome?

Unless you are a Registered Professional Engineer in the state of your
residence you are not qualified to make a Environmental Survey that
will hold up in court, if you are challenged.

It might not be possible to predict the value of Near Field intensities
in most Ham installations with enough accuracy to assure compliance
with IEEE C95.1-1992. Re-radiation and coupling within the wiring and
plumbing of a typical house would require extensive measurements,
which would have to be made for every frequency transmitted this is used.
A simple 40 Meter Dipole over the house at 25 feet would keep one busy
for quite a while making measurments. The hot spots would not be
easily predictable. Remember the standard is absolute. Don't be confused
with far field calculations, they apply only in a few UHF cases.

CENTRAL INDIANA REPEATER/ATV/GPS PACKET BALLOON LAUNCH

Region: Central Indiana

Date/Time: Saturday, September 7 / 7:00-8:00 AM EDT,
11:00-12:00 UTC

Location: Greentown, Indiana (8 miles east
of Kokomo)

Other states where
the signals will
reach easily: Ohio, Illinois, Michigan, Kentucky

Site Coordinates: approximate for initial antenna heading;
(not for navigating to launch site)
40' 29" North Lat.
85' 58" West Long.

ATV: 439.25 MHz AM NTSC from live camera

VHF/UHF Repeater: Input - 144.30 MHz FM
Dual Output - 444.85 MHz FM
- 52.525 MHz FM

Telemetry: 446.00 MHz FM AX.25 1200 baud packet
GPS/APRS position data

HF Net: 3.869 - 3.871 Mhz SSB

Local repeater
talk-in: probably 146.91 or 147.24

---
launch data courtesy of Malcolm Mallette, WA9BVS
malletem@trader.com

Please email me news of upcoming balloon launches and post-flight
reports for distribution on the Net.

> Although I have some experience designing and building regulated DC
> supplies, I am not familiar with inverters.

You want to do WHAT??? You would be pulling about 200+ amps out of your car battery, assuming you could
get transistors to switch that much current. You might do better to get some really large F.E.T.s and run
them in a parallel arrangement feeding a charge pump with synchronous rectifiers (more F.E.T.s) to bring
the voltage up to +/- 160 volts. Then use a switched chopper arrangement to make a pseudo sine wave at 60
Hz with a heavy duty filter on the output. I use a 100 amp police alternator on my car with a SEMI
truck/Tractor battery (1300 CCA) in the trunk and even I would think twice about this. Even with the
engine running and the alternator putting out 100 amps if you talked too much you could still discharge
the battery. Of course by then, everything else would probably suffer a meltdown.

If you want to use strictly magnetics at 60 Hz, prepare for some large amounts of metal. Maybe you could
use high frequency magnetic ferrites at above 100KHz to provide +/- 160 volts and switch it from there but
you are describing one Hell of a project.

All said and done, you might be better off buying a portable gasoline powered emergency generator.

One last item, some years back, Lincoln or somebody like that offered a 120 volt alternator designed for
rear window defrosting, but I don't think it had that much wattage. Some SEMI-truck and Large Caterpillar
alternators will put out up to 250 amps at 12 volts but probably cost a ton of money.

I can offer help, but here I will offer a good luck wish.

Bill Baka, bbaka@syix.com (when I'm not out of town working)!

Quote things when you want to complain about them. That way no
one will wonder what you're complaining about, and nobody will
have to keep retyping it so you can read it again. No, I wasn't
boasting about anything. I said the DX sticks to the bottom 25kc's
of the band because most DX stations want to work 5 stations
a minute, not five words a minute. Obviously, you never worked me
on CW, leave out the 'ur' and the ',' and the '73' and the 'DE' and
then you'll be close. Hundreds of stations I have worked would
much rather have a QSL card from me for thier DXCC than they
would have an 'interesting QSO' with me. They don't care what my
name is, or what kind of job I have, or where my wife is from, or
what kind of antenna I have. They want a QSL card. Period. When
a hundred or two hundred stations are calling you at the same time,
you work as many as you can as fast as you can. When only one
station is calling, you talk to him for 10 minutes, or an hour if you have
something to talk about. Lots of stations I work ask for QSL info
before they tell me their name or give me a signal report. If that
bothers you Todd, sorry. But it's not going to change, because it's
a part of the hobby that many people enjoy.

It amazes me how far off topic we can get when we move from the
discussion to the personal insult mode. We started out debating
if the CW test should be retained as a part of the testing, and now
we are in the 'knock DX' mode. I know what you do for fun on
internet, and but I don't know what you do on the radio, and I have
better things to do than a) worry about what it is you do or don't
do or b) knock what you do or don't do.

You don't like CW. Fine. Don't use it. You don't like DX. Fine. Don't
get on HF and work any. There are a lot of aspects of ham radio that
I think are totally rediculous and a waste of time. Like FM repeaters,
Packet, and traffic nets. But if you want to do them, be my guest. If you
enjoy doing them, it's not my job to knock them. Some hams love contests.
Some hams hate contests. Thats the good thing about the hobby,
we all don't have to be interested in the same thing. The only 'common

interests' we all must have are the abilities to pass the required tests for the class of license that we want. After that, we can all go our separate ways.

>"purpose" part ...

All part of the problem with the new breed, Carl. You've been a ham
for 20 years, right ? When you got started, how many companies were
advertising 10 METER DIPOLES for sale in QST ? When you hooked
up your first TNC, did you BUY a READY MADE cable to go to your
radio ? I doubt it. At least I sure hope not.

The 'new breed' may be more computer literate, but they sure appear to
be more soldering iron lame, if they have to BUY dipoles and TNC cables.

You best hope Icom and Kenwood and Yayhoo don't go away, because
I doubt too many nocode tech's will be building HT's from scratch.

Lee:

You give no call but do you any other credibility to call for such action?

Don't, get me wrong, please. You do have many good ideas. I don't think "moderated" is the way to go. This would impose a helluva time consuming obligation on someone, unless you choose to volunteer. <g>

The recent problems have mainly to do with never ending barbs against the ARRL, and the _never_ ending arguments of code-no-code. The latter has no answer EXCEPT to cave-in to those who insist NO qualifications should be necessary to blabber wherever on the air waves, to satisfy so-called "my rights". And their own pscyche.

The better answer may be to establish a new sub-group such as "rec.radio.amateur.politics". This would be an appropriate place to BLABBER whatever one's feelings of AR.

There are many degrees of "amateurs". Let the _lazy_ ones, malcontents and others get it ejaculated!

In article <50facd$nrs@news.ais.net> carl@ais.net writes:

Jari,

Please satisfy my curiosity ... what's the code requirement in Finland?

Do you consider your national organization to be truly representative of the views and interests of a majority of Finnish hams?

Do you have a reactionary "You're not a REAL ham if you don't love CW" faction in Finland?

Well, we have four operator classes which are a bit different from yours. Novice class operator takes CW test on 40 characters per minute. The characters are sent randomly in five character groups. General class operator takes CW test on 60 characters per minute. In Finland, general class happens to be the highest one. We do not have any advanced or extra class at all. Techican class operators do not take any CW test at all. They can not operate on HF but they have full priviledges above 30 MHz. Then there is the last class with the least priviledges, the communications class (or how should I translate that one). They do not take any CW and they are restricted to operating 70 cm only.

As far as I have understood, the administrative trend in Europe is to have less operator classes in the future, rather than more.

I believe that our national ham organization (SRAL) does indeed represent pretty well the views of the majority of Finnish hams. Something like 90 percent of all hams belong to SRAL and the board has quite often arranged polls to inquire about the feelings of the members. A few years ago a fiew unsatisfied hams tried to establish a new national organization, but that died quickly due to general lack of interest.

And finally, yes indeed. We also have our share of "You're not a real ham if you don't do cw" feelings.

> Gary
> --
> Gary Coffman KE4ZV

Gary, they (the ARRL) have been advised of their omission in testing for time delays and so far they have not responded. At the ARRL Digital Ccommunications Conference last year in Texas, my DRSTM (Data Radio Standard Test Methods) project was presented as a paper. Jon Bloom from the ARRL Labs was in the audience and during the discussion following the presentation stated that he thought that the tests reported in QST did include timing tests. A few days later he contacted the presenter and confirmed that there had not been any such tests conducted. They expressed good interest in the DRSTM project. A complete copy of the

final proposed test procedure document was forwarded to them in Jan of this year. So far no comments or even acknowledgement of receipt has been forthcoming. A follow up message has also not elicited any response. It makes one think that they are not really interested.

The BER test while an excellant SCREENING test for data handling characteristics does not in any way indicate the cause or the cure to any problems that might show up as a poor BER. Likewise a minimum TXD test is only useful as a screening test for switching times. If the Minimum TXD is high, it cannot in any way indicate the cause or cure for the poor switching times. A BER test alone (like the ARRL labs have been doing) can only be of use where data systems operate full duplex with 100% key down transmit. How many such amateur radio data systems are in use worldwide????? More than the fingers on your hand???? Maybe

Interestingly the person from TAPR who responded to the proposed test procedures made the statement that in his opinion the only really important test necessary was a BER test. That shows a similar lack of understanding of the problems. Maybe these guys have been spending too much time in the lab and not enough time in the real world.

Carl, you must be a natural born killer.

First it's Kill-the-Code.
Next it's Kill-the-ARRL.
Then it's Kill-the-DX.
Now it's Kill-the-QSL.

Sounds like somebody needs a different hobby. Or maybe we should
just cancel the whole hobby and get it over with.

The fact that some idiot is advertising something stupid in QST does not
prove that everyone entering ham radio these days is a bumbling,
incompetent appliance operator. Most of the folks I'm talking about are
damned good at the bench ... 'course, if you saw their work, you'd
probably have a hard time reading the part values on the 0402 or 0603
(the BIG ones) resistors ... I know I do ... my eyes are getting
challenged by the smaller surface-mount parts ... I need one of those
circular flourescent light/magnifier combos myself ...

Besides, in some instances, it's cheaper to buy a ready-made cable than
to buy 6 ft. of wire and two connectors ... I can't see any reason to
fault someone who takes aadvantage of economics in a case like that ...

>You best hope Icom and Kenwood and Yayhoo don't go away, because

Lee ... why are some people and assorted "thought-police" (who apparently "kill-file" what they don't want to read anyway) so hot to censor the rec.radio.* newsgroups to bury the no-code issue as deeply as possible???

I would bet that some newsservers don't carry all of the rec.radio.* hierarchy ... I know my old ISP in Florida didn't ... .misc seems to be carried widely.

I don't see a lot of code/no-code in .digital, .homebrew, .space, or .equipment ... what' so wrong with the discussion in .misc where it gets a wider audience and participation? (or is that precicely what you don't want?) Could you explain this?

Tony,

Another sub-group for the sub-citizens? If you don't want to follow "code/no-code" or "the ARRL sucks", please just kill-file them, rather than trying to force the people whose views you may disagree with into yet another form of "second-class citizenship" by censoring them off to some obscure sub-group that may or may not get distributed.

There are too damned many newsgroups to keep up with as it is, without unnecessarily creating more ....

If you don't want to read the threads, don't read them ... but don't try to banish them ...

Next thing you know, someone'll have Clinton talking about how his "C" chip will be mandated for inclusion in all modems produced in the future, designed to censor code/no-code messages from the internet, to protect the delicate sensibilities of the unprotected pro-code fans ...

From: <>
Message-ID: <50inqr$945@cu.comp-unltd.com>
Source record: 217440

I am not a ham radio operator, but I am interested in the possibility of using a HAM radio in conjunction with a computer to gain remote internet access. I have talked with a HAM operator and he told me that it is possible to communicate with a computer and a radio using a "node" and a software program called "packet". From the other things we talked about it seemed like it should be possible to set up a node on an internet server computer and link it to a node on a remote PC.

Is this possible?

Is anyone curently doing it?

If so, how fast is it (baud rate) and how much does the service cost?

How far can it be reliably used on a daily basis (how many miles)?

I appreciate any and all advice. If you don't want to post your insight, feel free to e-mail me under the heading on Ham Server at

g72365@imt.net

Thanks.

Actually, the gentleman to whom I was referring was a damned fine
engineer ... and the absolute best administrator I've ever known.
He was VERY widely respected both in government and throughout the
telecommunications industry. He was also the only person to ever be the
Chief (sucessively) of three different Bureaus at the FCC ... you'd be
doing a hell of a job if you could fill ONE of his shoes!!!
